完美的新版AD0-E117題庫上線和資格考試和神奇AD0-E117中的領先提供者：Adobe Experience Manager Architect Master

PDFExamDumps Adobe的AD0-E117認證的培訓工具包是由PDFExamDumps的IT專家團隊設計和準備的，它的設計與當今瞬息萬變的IT市場緊密相連，PDFExamDumps的訓練幫助你利用不斷發展的技術，提高解決問題的能力，並提高你的工作滿意度，我們PDFExamDumps Adobe的AD0-E117認證覆蓋率超過計畫的100%，只要你使用我們的試題及答案，我們保證你一次輕鬆的通過考試。

最新的 Adobe Experience Manager AD0-E117 免費考試真題 (Q35-Q40):

問題 #35

Content editors are uploading and editing thousands of PDFs daily, and notice a slow down of the AEM system over time while searching for assets in the DAM. The PDFs content does not need to be searchable. What would the AEM architect do to improve performance?

- A. Create a custom Lucene index
- **B. Disable Tika text extraction for the damAssetLucene index**
- C. Upsize the authoring instance to a larger tier
- D. Increase the number of maximum parallel jobs for the DAM Update Asset workflows

答案：B

問題 #36

A client using AEM 6.5 on-premise is experiencing an unsustainable repository growth of 100Gb a day. After investigation, an Architect finds out that the DAM is causing this issue. Each image uploaded to the DAM triggers the creation of approximately 100 renditions, necessary by business to consume in different channels and systems. The client also complains about stale content reported by site visitors happening randomly in pages where article-related components are present. How should the Architect address these issues?

- A. Split WCM and DAM in separate instances, set up Connected Assets, and re-implement article-related components to use AJAX to load the content
- **B. Leverage AEM Adaptive Image Servlet, cache image variations in Dispatcher, and reimplement article-related components to use AJAX to load the content**
- C. Split WCM and DAM in separate instances, set up Connected Assets, and implement a workflow to purge all pages affected by an article change in Dispatcher
- D. Leverage AEM Adaptive Image Servlet cache image variations in Dispatcher, and implement a cache TTL in Dispatcher

答案: B

解題說明:

According to Adobe Experience Manager documentation¹, the Adaptive Image Servlet is a feature that automatically selects the most appropriate rendition of an image asset based on the size of the container in which it is displayed. This can reduce the number of renditions needed and improve performance and scalability of AEM DAM. Caching image variations in Dispatcher can also help reduce repository growth and network traffic. Reimplementing article-related components to use AJAX can prevent stale content issues by dynamically loading fresh content from AEM without refreshing the whole page.

問題 #37

An AEM customer is designing a new website. The design shows that images are very prominent on the website but there is a concern about the big variety of aspect ratios used. Images can potentially be used on different places and components on the website. The customer is looking for a maintainable solution to limit the amount of content editing work when adding the assets to the pages.

Which solution should an Architect recommend?

- A. Use inline cropping feature of the image component on the pages
- B. Use the cropping feature on the asset in the AEM DAM
- **C. Integrate with Dynamic Media (Scene 7) and enable smart imaging**
- D. Integrate with Dynamic Media (Scene 7) and enable smart cropping

答案: C

解題說明:

"integrating with Dynamic Media (Scene 7) and enabling smart imaging can optimize the image delivery for different devices and screen sizes without requiring manual cropping".

問題 #38

A new AEM Sites implementation includes a component that lists the 10 most recently published PDF documents in AEM Assets. The component works as expected during development and passes QA testing. The business starts to use it while entering content and uploading assets in preparation for go-live. A few days later, the component's PDF list is empty. What is the most likely cause of the issue?

- **A. The component is missing a matching Oak index.**
- B. The component is missing the HTL display context to escape the PDF title.
- C. A PDF with incorrect MIME type has been uploaded.
- D. A PDF with too large file size has been uploaded.

答案: A

解題說明:

"the component is missing a matching Oak index that can efficiently query the PDF documents by their last modified date".
