What skills do I need to pass PRINCE2 Agile Foundation Exam

The PRINCE2 Agile Foundation exam is an entry level exam that will assess your understanding of the fundamental knowledge and skills needed to pass the PRINCE2 Agile Practitioner certification. It has been designed for team leaders, project managers, system

owners and others who need this basic level of PRINCE2 knowledge. Testers, business analysts, developers, product owners and project sponsors, who are involved in project management activities or require a basic understanding of PRINCE2 will also find this course useful. Just like any other certification exam, PRINCE2 Agile Foundation Exam is designed to test your knowledge on a particular subject. The only difference is that you are tested on your knowledge of the information related to this certification which is also covered in **PRINCE2 Agile Foundation exam dumps**. When you begin studying for PRINCE2 Agile Foundation Exam certification, you need to be familiar with some of the important topics covered in the exam. If you have taken an introductory course on PRINCE2 Agile Foundation Exam, then going over the course materials should suffice. However, if you were unable to take such a class or if you want to learn more about your certification, then taking a review course should be helpful in preparing for the exam. We offer training courses that are comprehensive and up-to-date on their website. You can take it at your own schedule, which gives you the flexibility that working towards PRINCE2 Agile Foundation Exam certification requires. We also provide sample tests so that you can get used to the format and time constraints of the actual test, while also seeing what areas of knowledge are covered in each section. By following these steps, it will be much easier to pass your exam when the time comes!

PRINCE2 Agile Foundation Sample Questions (Q27-Q32):

NEW QUESTION # 27

What is a purpose of the 'team planning' workshop?

- A. To update the project dashboard
- **B. To update the product backlog**
- C. To update the release map
- D. To update the OKRs

Answer: B

Explanation:

The Team Planning Workshop is primarily held to update the product backlog. This collaborative session allows the delivery team to break down, refine, and reprioritize user stories or tasks to prepare for the upcoming iteration or sprint. The team reviews the product backlog items, clarifies acceptance criteria, estimates effort, and commits to the planned work.

Updating the product backlog at this level ensures that detailed planning aligns with the overall project vision and release goals. It empowers the team to self-organize and manage their workload, supporting agile principles of autonomy and collaboration.

While the project dashboard (A) provides status reporting, the release map (C) focuses on higher-level release planning, and OKRs (D) relate to strategic objectives, these are not the central focus of the team planning workshop.

PRINCE2 Agile promotes team planning workshops as essential forums for translating business priorities into actionable, manageable work for delivery teams.

NEW QUESTION # 28

According to PRINCE2 Agile, which form of communication shows that a team is vibrant and interactive?

- A. Using meeting minutes to share decisions
- **B. Using visualization to display information**
- C. Using email to document discussions
- D. Using social media to reach more people

Answer: B

Explanation:

NEW QUESTION # 29

Which BEST describes the senior user role when tailoring the organization theme?

- A. An 'executive sponsor'
- B. An 'agile sponsor'
- C. A 'coach'
- **D. A 'super product owner'**

Answer: D

NEW QUESTION # 30

What is the purpose of the "agile enablement" workshop?

- A. To identify, assess, and plan for risks associated with enterprise agility
- **B. To identify, assess, and plan for risks associated with Agile adoption**
- C. To identify, assess, and plan for risks associated with project delivery
- D. To identify, assess, and plan for risks associated with team delivery

Answer: B

Explanation:

Agile Foundation guidance explains that the purpose of the agile enablement workshop is to identify, assess, and plan for risks associated with Agile adoption, making option C the correct answer. This workshop is a structured activity designed to help organizations and project teams understand how well Agile ways of working fit their specific context and what challenges may arise when adopting Agile approaches.

The agile enablement workshop focuses on readiness rather than delivery execution. It examines factors such as organizational culture, governance expectations, stakeholder engagement, team capability, leadership support, and external constraints. By discussing these areas openly, participants can identify potential barriers to Agile adoption, assess their impact, and agree on actions to reduce or manage those risks. This proactive approach supports informed decision-making and avoids unrealistic expectations about Agile.

Option A, risks associated with project delivery, relates more to traditional project risk management practices. Option B, team delivery risks, focuses narrowly on team-level execution issues rather than adoption. Option D, enterprise agility risks, applies at a broader organizational transformation level and goes beyond the typical scope of an agile enablement workshop, which is usually project- or initiative-focused.

Agile Foundation documents emphasize that Agile adoption is not risk-free and should be approached thoughtfully. The agile enablement workshop helps ensure that Agile is tailored appropriately rather than applied mechanically. It supports alignment between Agile teams and governance structures, clarifies where flexibility is possible, and highlights where controls are required. By identifying and planning for adoption risks early, organizations increase the likelihood of successful Agile implementation while preserving the core values of adaptability, collaboration, and value-driven delivery.

NEW QUESTION # 31

What is a responsibility of the team coach?

- A. To liaise with the chief product owner
- B. To liaise with project assurance
- **C. To liaise with the agile coach**
- D. To liaise with the project manager

Answer: C

Explanation:

In Agile Foundation guidance, the team coach plays a key role in supporting one or more Agile teams in adopting and improving Agile ways of working. A core responsibility of the team coach is to liaise with the agile coach, making option A the correct answer. This relationship ensures alignment between team-level coaching and organization-wide Agile adoption.

The team coach focuses primarily on the day-to-day effectiveness of the team. This includes helping the team understand Agile principles, improve collaboration, enhance communication, and continuously improve their ways of working. The agile coach, on the other hand, typically operates at a broader level, supporting multiple teams, leaders, and the organization as a whole in embedding Agile culture and practices. By liaising with the agile coach, the team coach ensures that insights, challenges, and progress at the team level are shared and addressed consistently across the organization.

Option B, liaising with the project manager, is not a primary responsibility of the team coach in Agile foundations. While coordination may occur, Agile reduces dependency on traditional command-and-control roles. Option C, liaising with the chief product owner, is also not central to the team coach role, as product ownership focuses on value and prioritization rather than team dynamics and Agile maturity. Option D, liaising with project assurance, aligns more with governance and compliance functions rather than coaching responsibilities.

Agile Foundation documents emphasize that effective coaching relies on collaboration between coaching roles. The team coach provides detailed, practical feedback from the team, while the agile coach offers strategic direction, consistency, and organizational support. This collaboration strengthens Agile adoption, helps remove systemic impediments, and ensures that teams are supported
