

# GH-900 Training Online: GitHub Foundations & GitHub Foundations Dumps Torrent

DOWNLOAD the newest ValidVCE GH-900 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=13JTX3u8ckUavJgGq4e856Q3P8vRffEAD9>

At the time when people are hesitating about that which kind of GH-900 study material should be chosen in order to prepare for the important exam I would like to recommend the GH-900 training materials compiled by our company for you to complete the task. We have put substantial amount of money and effort into upgrading the quality of our GH-900 Preparation material. There are so many advantages of our GH-900 actual exam, such as free demo available, multiple choices, and practice test available to name but a few.

ValidVCE GitHub Foundations (GH-900) practice test software is another great way to reduce your stress level when preparing for the Microsoft Exam Questions. With our software, you can practice your excellence and improve your competence on the GitHub Foundations (GH-900) exam dumps. Each Microsoft GH-900 practice exam, composed of numerous skills, can be measured by the same model used by real examiners.

## Microsoft GH-900 Test Prep, GH-900 Latest Braindumps Book

When people take the subway staring blankly, you can use Pad or cell phone to see the PDF version of the GH-900 study materials. While others are playing games online, you can do online GH-900 exam questions. We are sure that as you hard as you are, you can Pass GH-900 Exam easily in a very short time. While others are surprised at your achievement, you might have found a better job.

## Microsoft GH-900 Exam Syllabus Topics:

| Topic | Details |
|-------|---------|
|       |         |

|         |  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> <li>Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.</li> </ul>   |
| Topic 2 | <ul style="list-style-type: none"> <li>Benefits of the GitHub Community: This section targets Community Managers and Open Source Contributors, focusing on engaging with the GitHub community. Candidates learn to participate in open source projects, utilize GitHub Discussions for collaboration and support, and contribute meaningfully to community-driven projects.</li> </ul>   |
| Topic 3 | <ul style="list-style-type: none"> <li>Collaboration Features: This section measures skills of Software Engineers and Team Leads and covers collaborative workflows using GitHub. It includes forking repositories, creating and managing pull requests, reviewing and merging code changes, and using GitHub Actions to support CI</li> <li>CD pipelines. Candidates also explore project management features such as creating and managing issues, using labels, milestones, and project boards, and tracking progress through GitHub Projects.</li> </ul>   |
| Topic 4 | <ul style="list-style-type: none"> <li>Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.</li> </ul>   |
| Topic 5 | <ul style="list-style-type: none"> <li>Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI</li> <li>CD pipeline implementation. Candidates also learn GitHub's tools and best practices for conducting and managing code reviews.</li> </ul>   |
| Topic 6 | <ul style="list-style-type: none"> <li>Introduction to Git and GitHub: This section of the exam measures skills of Junior Developers and Platform Support Specialists and covers the basic understanding of Git and GitHub. It explains what Git is and why it is used, the fundamental Git workflow, and concepts related to repositories including their local and remote distinctions. Candidates learn essential Git commands such as initializing and cloning repositories, adding and committing changes, pushing and pulling updates, and branching and merging. It also covers navigating GitHub by creating accounts, managing repositories, understanding its interface, and working with issues and pull requests.</li> </ul> |

## Microsoft GitHub Foundations Sample Questions (Q17-Q22):

### NEW QUESTION # 17

From the list of projects for an organization, how can a user identify a GitHub Projects template?

- A. Use the "is  
" filter in the search text box.
- B. Check the "show template" checkbox.
- C. Select the Templates tab.**
- D. View the contents in the .github/projects folder.

**Answer: C**

Explanation:

In GitHub, when viewing the list of projects for an organization, a user can identify a GitHub Projects template by selecting the Templates tab. This tab specifically lists available templates that can be used to create new projects based on predefined structures and workflows.

### NEW QUESTION # 18

What are the defining features of Git?

- A. Low-cost local branching, convenient staging areas, multiple workflows, and being designed for managing small projects

- B. Distributed version control, open source software, and being designed for handling projects of any size with efficiency
- C. Sequential version control, cloud-based hosting service, and being designed for collaboration on large projects
- D. Centralized version control, proprietary software, and being designed for small projects

#### Answer: B

Explanation:

Git is a widely-used version control system that has several defining features:

Distributed Version Control:

Git is a distributed version control system, meaning that every developer has a full copy of the entire repository, including its history, on their local machine. This enables greater flexibility, as work can be done offline and each user has access to the full project history.

Open Source Software:

Git is open-source, meaning its source code is freely available for use, modification, and distribution. This fosters a large community of users and contributors who continuously improve the software.

Efficiency with Large Projects:

Git is designed to handle projects of any size with speed and efficiency. It can manage large codebases and many contributors without significant performance degradation, making it suitable for everything from small personal projects to large, complex software systems.

Incorrect Options:

Option B is incorrect because Git is not a sequential version control system, nor is it inherently tied to cloud-based services. GitHub, GitLab, and other platforms offer cloud hosting for Git repositories, but Git itself is a version control tool.

Option C is incorrect because Git is not limited to small projects; it is designed to scale efficiently, and the other features mentioned are only partial descriptions of Git's capabilities.

Option D is incorrect because Git is not a centralized version control system; it is distributed. Additionally, Git is open-source, not proprietary, and is used for projects of all sizes.

#### NEW QUESTION # 19

Which of the following best describes a Codespace?

- A. An AI pair programmer that offers autocomplete-style suggestions
- B. A Visual Studio Code plug-in to manage local devcontainers
- C. A development environment hosted in the cloud
- D. A lightweight editing experience that runs entirely in your browser

#### Answer: C

Explanation:

A Codespace is a cloud-hosted development environment provided by GitHub. It allows developers to code in a fully-configured environment that can be accessed from any device with an internet connection. Codespaces integrate with Visual Studio Code, either through the desktop app or directly in the browser, providing a consistent development experience without the need to manually set up a local environment.

Cloud-Hosted Development Environment:

Option C is correct because GitHub Codespaces are essentially cloud-based environments that are pre-configured with the tools and dependencies needed for development. This allows developers to start coding immediately without the overhead of setting up a local environment.

Incorrect Options:

Option A is partially correct in that Codespaces can be accessed and used in a browser, but the defining feature is that it's a full development environment, not just a lightweight editor.

Option B is incorrect because this describes GitHub Copilot, not Codespaces.

Option D is incorrect because Codespaces is not a Visual Studio Code plug-in; it is a cloud-based service that integrates with Visual Studio Code.

## NEW QUESTION # 20

Which of the following two-factor authentication (2FA) methods can you use to secure a GitHub account?  
(Each answer presents a complete solution. Choose three.)

- A. Authenticator app
- B. Security keys
- C. Single sign-on
- D. Security questions
- E. GitHub mobile

**Answer: A,B,E**

Explanation:

The following two-factor authentication (2FA) methods can be used to secure a GitHub account:

A . Authenticator app: You can use an authenticator app (like Google Authenticator or Authy) to generate time-based one-time passwords (TOTP) for logging in.

C . GitHub mobile: The GitHub mobile app can also be used to receive 2FA codes, adding convenience for users who prefer to manage everything from their mobile devices.

D . Security keys: Physical security keys (such as YubiKeys) can be used as a strong form of 2FA, requiring physical access to the key to authenticate.

Security questions and Single sign-on (SSO) are not considered 2FA methods in the context of GitHub account security.

## NEW QUESTION # 21

As a user, which of the following default labels is used to indicate that a maintainer needs assistance on an issue or pull request?

- A. Help wanted
- B. Question
- C. Enhancement
- D. Documentation

**Answer: A**

Explanation:

In GitHub, labels are used to categorize issues and pull requests, and certain default labels are provided to help manage tasks:

Help Wanted Label:

Option C is correct. The "Help wanted" label is used to indicate that the maintainer of the repository needs assistance on a particular issue or pull request. This label helps in attracting contributors who might be interested in helping with specific tasks.

Other Options:

Option A ("Enhancement") is incorrect because it indicates a request for a new feature or improvement rather than a call for help.

Option B ("Question") is incorrect because it is used to flag issues or pull requests that seek clarification or additional information, not necessarily requiring assistance.

Option D ("Documentation") is incorrect because it labels issues or PRs related to documentation, not for seeking help.

Reference:

GitHub Docs: Using Labels

## NEW QUESTION # 22

.....

Passing the GH-900 certification can prove that you are very competent and excellent and you can also master useful knowledge and skill through passing the test. Purchasing our GH-900 guide torrent can help you pass the exam and it costs little time and energy. The GH-900 exam questions have simplified the sophisticated notions. The software boosts varied self-learning and self-assessment functions to check the learning results. The software of our GH-900 Test Torrent provides the statistics report function and help the students find the weak links and deal with them.
