

# Test F5 F5CAB5 Guide Online | F5CAB5 Braindumps

P.S. Free & New F5CAB5 dumps are available on Google Drive shared by Exam4Tests: <https://drive.google.com/open?id=1YQKt9vT2iksQQpRMJVQV8I4kZLYKtvxB>

We offer you free update for one year after purchasing, that is to say, in the following year, you will get the updated version for F5CAB5 learning materials for free. And our system will immediately send the latest version to your email address automatically once they update. What's more, the F5CAB5 Learning Materials are high quality, and it will ensure you to pass the exam successfully. Pass guarantee and money back guarantee if you can't pass the exam.

If you don't have an electronic product around you, or you don't have a network, you can use a printed PDF version of our F5CAB5 training materials. We also strongly recommend that you print a copy of the PDF version of your F5CAB5 study materials in advance so that you can use it as you like. And you can also take notes on the printale F5CAB5 Exam Questions whenever you had a better understanding. Of course, which kind of equipment to choose to study will ultimately depend on your own preference.

## Free PDF 2026 F5 Valid F5CAB5: Test BIG-IP Administration Support and Troubleshooting Guide Online

Thousands of BIG-IP Administration Support and Troubleshooting (F5CAB5) exam applicants are satisfied with our F5CAB5 practice test material because it is according to the latest BIG-IP Administration Support and Troubleshooting (F5CAB5) exam syllabus and we also offer up to 1 year of free F5 Dumps updates. Visitors of Exam4Tests can check the BIG-IP Administration Support and Troubleshooting (F5CAB5) product by trying a free demo. Buy the F5CAB5 test preparation material now and start your journey towards success in the BIG-IP Administration Support and Troubleshooting (F5CAB5) examination.

## F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Which file should the BIG-IP Administrator check to determine when a Virtual Server changed its status from RED to GREEN?

- A. /var/log/lastlog
- B. /var/log/ltn
- C. /var/log/monitors
- D. /var/log/audit

**Answer: B**

Explanation:

Status changes for local traffic objects (Virtual Servers, Pools, Nodes) are recorded in the Local Traffic Manager (LTM) log Health State Logging: When a health monitor marks a resource as available (Green) or unavailable (Red), the system generates a log message in /var/log/ltn.

Log Entry Example: A transition from Red to Green will appear as a message similar to: 010100273: Pool /Common/my\_pool member /Common/10.0.0.1:80 monitor status up.

Evaluation of Other Options:

/var/log/audit (Option A) logs who changed a configuration, not automated state changes from health monitors.

/var/log/lastlog (Option C) is a standard Linux file that tracks the last login time of users.

/var/log/monitors (Option D) is not a standard log file on the BIG-IP system.

**NEW QUESTION # 32**

Refer to the exhibit.

A BIG-IP Administrator needs to deploy an application on the BIG-IP system to perform SSL offload and re-encrypt the traffic to pool members. During testing, users are unable to connect to the application.

What must the BIG-IP Administrator do to resolve the issue? (Choose one answer)

- A. Configure Protocol Profile (Server) as splitsession-default-tcp
- **B. Configure an SSL Profile (Server)**
- C. Remove the configured SSL Profile (Client)
- D. Enable Forward Proxy in the SSL Profile (Client)

**Answer: B**

**Explanation:**

To successfully perform SSL offload and re-encryption on a BIG-IP system, the virtual server must be configured with both a Client SSL profile and a Server SSL profile. The Client SSL profile enables BIG-IP to decrypt inbound HTTPS traffic from clients, while the Server SSL profile is required to re-encrypt traffic before forwarding it to the pool members.

From the exhibit, the virtual server has a Client SSL profile configured, which allows BIG-IP to accept HTTPS connections from clients. However, there is no Server SSL profile attached, meaning BIG-IP attempts to send unencrypted HTTP traffic to pool members listening on HTTPS (port 443). This protocol mismatch causes the server-side SSL handshake to fail, resulting in users being unable to connect to the application.

This behavior is well documented in BIG-IP SSL troubleshooting guides: when backend servers expect HTTPS, a Server SSL profile is mandatory to establish a secure connection from BIG-IP to the pool members.

The other options are incorrect:

- \* Removing the Client SSL profile (Option A) would break client-side HTTPS.
- \* The server-side TCP profile (Option B) is unrelated to SSL encryption.
- \* Forward Proxy (Option C) is only used for outbound SSL inspection scenarios.

Therefore, configuring an SSL Profile (Server) is the correct and required solution.

### NEW QUESTION # 33

A BIG-IP device sends out the following SNMP trap: big-ipo.f5.com - bigipExternalLinkChange Link: 1.0 is DOWN. Where in the BIG-IP Configuration utility should the BIG-IP Administrator verify the current status of Link 1.0?

- A. Network > Interfaces > Interface List
- B. System > Platform
- C. Statistics > Performance > System
- D. Network > Trunks > Trunk List

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Support and Troubleshooting documents: Identifying network-level performance issues often starts with investigating hardware-level alerts<sup>78</sup>. In F5 terminology, a "Link" like "1.0" or "1.1" refers to a physical interface on the appliance<sup>79</sup>. When an SNMP trap reports that a link is "DOWN," it indicates a loss of signal or an administrative shutdown of the physical port<sup>80</sup>. To verify this, the administrator must navigate to Network > Interfaces > Interface List<sup>81</sup>. This screen provides real-time status, showing whether the interface is "up," "down," or "uninitialized," as well as any media speed or duplex mismatches that could be causing performance degradation<sup>82</sup>. Troubleshooting this is the first step in resolving "pool member down" or "VLAN failsafe" issues, as a down interface will take down any VLANs associated with it, immediately halting all traffic flow for the services relying on that physical path.

### NEW QUESTION # 34

Users report that traffic is negatively affected every time a BIG-IP device fails over. The traffic becomes stabilized after a few minutes. What should the BIG-IP Administrator do to reduce the impact of future failovers?

- A. Enable Failover Multicast Configuration
- B. Configure a global SNAT Listener
- C. Set up Failover Method to HA Order
- D. Configure MAC Masquerade

**Answer: D**

Explanation:

When traffic "stabilizes after a few minutes" following a failover, it points to a network-level performance issue involving ARP cache on upstream routers and switches. Each BIG-IP interface has a unique hardware MAC address. During failover, the Standby device takes over the floating IP address, but the upstream switch still associates that IP with the MAC of the now-offline device. Traffic is lost until the switch learns the new MAC or its ARP entry expires. "MAC Masquerading" solves this by creating a shared, virtual MAC address for the floating traffic group. This virtual MAC is used by whichever device is currently active. Because the MAC address for the virtual server IP never changes from the perspective of the network, the upstream devices do not need to update their ARP tables. This troubleshooting solution eliminates the delay associated with failover, providing a seamless transition and ensuring that application traffic flow is not disrupted when the BIG-IP HA state changes.

### NEW QUESTION # 35

Where should the BIG-IP Administrator go in the GUI to verify the status of pool members of a pool?

- A. Local Traffic --> Pools
- B. Local Traffic --> Nodes
- C. Local Traffic --> Virtual Servers --> Statistics
- D. Local Traffic --> Pools --> <pool\_in\_question> --> Members

**Answer: D**

Explanation:

To verify the specific health and availability status of individual members within a specific pool, the administrator must navigate to the Members tab of that specific pool.

Navigation Path: The correct path is Local Traffic > Pools > Pool List, then clicking on the name of the <pool\_in\_question>, and finally selecting the Members tab. This screen provides a granular view of each member's IP address, port, and their current status (indicated by the colored icons:

Green, Red, Yellow, or Blue).

Why Option A is correct: While you can see a general status summary on the Pool List page (Option B), that page only shows the status of the pool as a whole. To troubleshoot why a pool is not working or to see which specific member is down, you must drill down into the Members tab.

## NEW QUESTION # 36

.....

If you need to purchase F5CAB5 training materials online, you may pay much attention to the money safety. We apply the international recognition third party for payment, therefore if you choose us, your account and money safety can be guaranteed. And the third party will protect your interests. In addition, F5CAB5 Exam Dumps cover most of knowledge points for the exam, and you can have a good command of them as well as improve your professional ability in the process of learning. In order to strengthen your confidence for F5CAB5 exam materials, we are pass guarantee and money back guarantee,
