New Release Salesforce Data-Architect Dumps For Brilliant Exam Study 2026

It is known to us that the Data-Architect exam has been increasingly significant for modern people in this highly competitive word, because the test certification can certify whether you have the competitive advantage in the global labor market or have the ability to handle the job in a certain area, especial when we enter into a newly computer era. Therefore our Data-Architect practice torrent is tailor-designed for these learning groups, thus helping them pass the exam in a more productive and efficient way and achieve success in their workplace.

Salesforce Certified Data Architect Sample Questions (Q69-Q74):

NEW QUESTION # 69

Northern Trail Outfitters (NTO) has an external product master system that syncs product and pricing information with Salesforce.
Users have been complaining that they are seeing discrepancies in product and pricing information displayed on the NTO website and Salesforce.
As a data architect, which action is recommended to avoid data sync issues?

- A. Build a custom integration for two-way sync of product and pricing information between product master to Salesforce.
- B. Build a custom integration for one-way sync of product and pricing information from product master to Salesforce.
- C. Use the Customer 360 data manager to sync product and pricing information from product master database to Salesforce.
- D. Implement a manual process to update the products from an extract from the products master on a weekly basis.

Answer: C

Explanation:
According to Trailhead2, Customer 360 Data Manager is a feature that allows administrators to connect, reconcile, and share customer data across Salesforce orgs and external systems. Customer 360 Data Manager can sync product and pricing information from product master database to Salesforce using predefined mappings and rules, ensuring data quality and consistency. Option D is the correct answer because it suggests using Customer 360 Data Manager to sync product and pricing information from product master database to Salesforce. Option A is incorrect because building a custom integration for two-way sync of product and pricing information between product master and Salesforce can introduce data conflicts and duplication issues, as both systems can update the same data independently. Option B is incorrect because building a custom integration for one-way sync of product and pricing information from product master to Salesforce can be costly and time-consuming, as it requires custom development and maintenance. Option C is incorrect because implementing a manual process to update the products from an extract from the products master on a weekly basis can result in data latency and errors, as the products information may change more frequently than once a week.

NEW QUESTION # 70

Due to security requirements, Universal Containers needs to capture specific user actions, such as login, logout, file attachment download, package install, etc. What is the recommended approach for defining a solution for this requirement?

- A. Use a field audit trail to capture field changes.
- B. Use Event Monitoring to capture these changes.
- C. Use a third-party AppExchange app to capture changes.
- D. Use a custom object and trigger to capture changes.

Answer: B

NEW QUESTION # 71

UC has a roll-up summary field on Account to calculate the count of contacts associated with an account.
During the account load, SF is throwing an "Unable to lock a row" error.
Which solution should a data architect recommend, to resolve the error?

- A. Perform Batch job in serial mode and reduce batch size
- B. Leverage data loader platform API to load data.
- C. Perform Batch job in parallel mode and reduce Batch size
- D. Defer roll-up summary fields calculation during data migration.

Answer: A

Explanation:
The best solution to resolve the error of "Unable to lock a row" during the account load is to perform batch job in serial mode and reduce batch size. This is because roll-up summary fields are calculated synchronously when the parent record is updated, and asynchronously when the child record is updated. Therefore, updating many child records at once can cause locking issues on the parent record. To avoid this, it is recommended to use serial mode and smaller batch sizes when loading data using tools like Data Loader or Bulk API12.
Leverage data loader platform API to load data is not a good option because it does not specify the mode or batch size. Perform batch job in parallel mode and reduce batch size is not a good option because parallel mode can still cause locking issues even with smaller batches. Defer roll-up summary fields calculation during data migration is not a good option because it is not possible to defer or disable roll-up summary fields calculation

NEW QUESTION # 72

A large telecommunication provider that provides internet services to both residence and business has the following attributes:

A customer who purchases its services for their home will be created as an Account in Salesforce.

Individuals within the same house address will be created as Contact in Salesforce.

Businesses are created as Accounts in Salesforce.

Some of the customers have both services at their home and business.

What should a data architect recommend for a single view of these customers without creating multiple customer records?

- A. Customers are created as Person Accounts and related to Business and Residential Accounts using the Account Contact relationship.
- B. Customer are created as individual objects and relate with Accounts for Business and Residence accounts.
- C. Costumers are created as Accounts for Residence Account and use Parent Account to relate Business Account.
- D. Customers are created as Contacts and related to Business and Residential Accounts using the Account Contact Relationships.

Answer: A

Explanation:

Creating customers as Contacts and relating them to Business and Residential Accounts using the Account Contact Relationships (option A) is the best option to recommend for a single view of these customers without creating multiple customer records, as it allows the data architect to model complex relationships between customers and accounts using native Salesforce features and tools. Creating customers as Person Accounts and relating them to Business and Residential Accounts using the Account Contact relationship (option B) is not a good option, as it may create data redundancy and inconsistency, and it does not leverage the existing Contact object. Creating customers as individual objects and relating them with Accounts for Business and Residence accounts (option C) is also not a good option, as it may require more customization and maintenance effort, and it does not leverage the existing Account and Contact objects. Creating customers as Accounts for Residence Account and using Parent Account to relate Business Account (option D) is also not a good option, as it may create confusion and complexity with the account hierarchy, and it does not leverage the existing Contact object.

NEW QUESTION # 73

Universal Containers (UC) has multi -level account hierarchies that represent departments within their major Accounts. Users are creating duplicate Contacts across multiple departments. UC wants to clean the data so as to have a single Contact across departments. What two solutions should UC implement to cleanse their data? Choose 2 answers

- A. Make use of the Merge Contacts feature of Salesforce to merge duplicates for an Account.
- B. Use Data.com to standardize Contact address information to help identify duplicates.
- C. Use Workflow rules to standardize Contact information to identify and prevent duplicates.
- D. Make use of a third -party tool to help merge duplicate Contacts across Accounts.

Answer: B,D

NEW QUESTION # 74

......

Our Data-Architect guide torrent is compiled by experts and approved by the experienced professionals. They are revised and updated according to the change of the syllabus and the latest development situation in the theory and practice. The language is easy to be understood to make any learners have no learning obstacles and our Data-Architect study questions are suitable for any learners. Our Data-Architect study questions are linked tightly with the exam papers in the past and conform to the popular trend in the industry. Our product convey you more important information with less amount of the questions and answers. Thus we can be sure that our Data-Architect guide torrent are of high quality and can help you pass the exam with high probability.
