IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q114-Q119):

NEW QUESTION # 114

Which potential problem can Watson OpenScale detect and mitigate?

- A. Drift
- B. New data overwrites
- C. Complex rule set
- D. Limited storage capacity

Answer: A

Explanation:

Watson OpenScale includes advanced monitoring capabilities for deployed AI models, including drift detection. Data drift refers to changes in input data distributions over time, which can degrade model performance. OpenScale continuously compares incoming data to the original training data to detect deviations and alert users when retraining may be required. It does not manage storage, data overwrites, or rule-based systems, making option B the only correct choice.

NEW QUESTION # 115

After importing IBM Knowledge Accelerator assets using an API endpoint, what change must be made before the assets can be used by the appropriate users?

- A. Add users to the Knowledge Accelerators security group.
- B. Add collaborators to the Knowledge Accelerators categories.
- C. Ensure the user permission role is active.
- D. Ensure a shared credential has been configured.

Answer: B

Explanation:

After importing IBM Knowledge Accelerator (KA) assets using an API (or other methods), those assets -- such as categories,

terms, and relationships -- are part of governance artifacts in Cloud Pak for Data. However, to make them usable by specific users, you must assign collaborators to the relevant categories.

This ensures users have the appropriate permissions (e.g., to view, curate, or manage terms) within the Information Governance Catalog (IGC) or Watson Knowledge Catalog.
