

Exam H12-841_V1.5 Preparation | H12-841_V1.5 Free Pdf Guide

DOWNLOAD the newest ValidExam H12-841_V1.5 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1KuCMY5Bo9fz5qZdT5Ly6FLAN-IQD-Pb>

You must have thought about moving forward successfully in this competitive and fast-changing technological world. If you want to boost your career Huawei H12-841_V1.5 certification is the most acclaimed and honorable certificate in the tech sector. But the confusion regarding the preparation and relevant Huawei H12-841_V1.5 Practice Test questions must have emerged in your mind too.

This is the reason why the experts suggest taking the H12-841_V1.5 practice test with all your concentration and effort. The more you can clear your doubts, the more easily you can pass the H12-841_V1.5 exam. ValidExam HCIP-Datacom-Campus Network Planning and Deployment V1.5 (H12-841_V1.5) practice test works amazingly to help you understand the Huawei H12-841_V1.5 Exam Pattern and how you can attempt the real Huawei Exam Questions. It is just like the final H12-841_V1.5 exam pattern and you can change its settings.

H12-841_V1.5 Free Pdf Guide, H12-841_V1.5 Latest Questions

The quality of ValidExam product is very good and also have the fastest update rate. If you purchase the training materials we provide, you can pass Huawei Certification H12-841_V1.5 Exam successfully.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q66-Q71):

NEW QUESTION # 66

(When access authentication is deployed on a network, which of the following servers typically reside in the pre-authentication domain?)

- A. Antivirus server
- B. DNS server
- C. FTP server
- D. DHCP server

Answer: B,D

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

In Huawei campus access authentication designs, network access is divided into pre-authentication, isolation, and post-authentication domains to control user access at different stages of authentication. The pre-authentication domain provides users with only the most basic network services required to initiate authentication. These services typically include DHCP and DNS. DHCP allows unauthenticated terminals to obtain IP addresses and basic network parameters, while DNS enables domain name resolution so that users can reach authentication portals or admission servers. Therefore, DHCP and DNS servers are essential components of the pre-authentication domain, making options C and D correct. An FTP server is a general-purpose file transfer service and is not required for user authentication. An antivirus server belongs to the isolation domain, where users are redirected if authentication fails or if their devices do not meet security posture requirements, such as outdated virus signatures. These servers provide remediation resources but are not part of the pre-authentication process. According to HCIP Datacom Campus Network documentation, limiting the pre-authentication domain to only essential services reduces security risks while ensuring successful user onboarding.

NEW QUESTION # 67

In Huawei's WAN solution, for "real-time video surveillance (such as 4K surveillance streams) transmitted across regions," which of the following technologies can "reduce bandwidth usage while ensuring surveillance image quality"?

- A. H.265+ encoding technology for surveillance video (saving 30% more bandwidth compared to B. 265)
- B. 265)
- C. Reduce the resolution of the surveillance video to 1080P, sacrificing image quality.
- D. Reduce the frame rate of the surveillance video to 10fps, thus reducing smoothness.
- E. The surveillance video is transmitted at a fixed bitrate without optimization.

Answer: A

NEW QUESTION # 68

(Which of the following information types are transmitted through enhanced BGP EVPN in Huawei SD-WAN Interconnection Solution?)

- A. TNP route
- B. GRE configuration
- C. Service route
- D. IPsec SA information

Answer: A,C,D

Explanation:

In the Huawei SD-WAN Interconnection Solution, enhanced BGP EVPN is used as the core control-plane technology to distribute not only traditional routing information but also SD-WAN-specific service and tunnel-related data. This enhancement allows centralized control and automated service deployment across branch and hub sites.

TNP routes are one of the key information types transmitted through enhanced BGP EVPN. TNP (Transport Network Plane) routes describe the reachability of transport tunnels between SD-WAN nodes and are essential for establishing and maintaining overlay connectivity across different transport networks such as Internet, MPLS, or LTE.

IPsec SA (Security Association) information is also carried through enhanced BGP EVPN. This allows SD-WAN devices to dynamically establish secure IPsec tunnels without manual configuration, ensuring encrypted communication between sites while supporting fast deployment and scalability.

In addition, service routes are distributed using enhanced BGP EVPN. Service routes identify application or service-level reachability and enable intelligent traffic steering, policy-based forwarding, and service chaining across the SD-WAN fabric.

GRE configuration, however, is not transmitted through enhanced BGP EVPN. GRE parameters are typically configured locally and do not belong to the control information exchanged by EVPN in the Huawei SD-WAN solution. Therefore, the correct information types are TNP routes, IPsec SA information, and service routes.

NEW QUESTION # 69

In the WAN BGP protocol, which of the following attributes can be used to "transmit route priority to EBGP neighbors, with smaller values indicating higher priority"?

- A. Next Hop
- B. MED Multi-Exit Discriminator

- C. AS_PATH
- D. Local Preference

Answer: B

NEW QUESTION # 70

In the wide area network IPv6 transition scenario, if "internal IPv6 terminals need to access IPv4 internet resources but do not have public IPv4 addresses", which of the following technologies should be used?

- A. IPv6 over IPv4 tunnel (only enables communication between IPv6 terminals)
- B. IPv4/IPv6 dual-stack technology (requires the enterprise to have a public IPv4 address)
- C. DNS64 + NAT64 (Enables IPv6 access to IPv4 even without a public IPv4 address)
- D. Close the IPv6 terminal and use IPv4 access instead.

Answer: C

NEW QUESTION # 71

.....

If you are a positive and optimistic person and want to improve your personal skills, especially for the IT technology, congratulate you, you have found the right place. Huawei exam certification as an important IT certification has attracted many IT candidates. While ValidExam H12-841_V1.5 real test dumps can help you get your goals. The aim of the ValidExam is to help all of you pass your test and get your certification. When you visit our website, you will find that we have three different versions for the dumps. Then focusing on the H12-841_V1.5 free demo, you can free download it for a try. The questions of the free demo are part of the H12-841_V1.5 complete exam dumps, so if you want the complete one, you will pay for it. What's more, the H12-841_V1.5 questions are selected and compiled by our professional team with accurate answers which can ensure you 100% pass.
