SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q47-Q52):

NEW QUESTION # 47

In a planning data model, what dimensions are included by default? Note: There are 2 correct Answers to this question.

- A. Entity
- B. Organization
- C. Version
- D. Date

Answer: C,D

Explanation:

In a planning data model in SAP Analytics Cloud, the Date and Version dimensions are included by default. The Date dimension is essential for time-based planning and analysis, while the Version dimension allows for the creation and management of different data scenarios, such as budget, forecast, and actuals. These dimensions provide a foundational structure for planning activities within the model.

Answer: A,D,E

NEW QUESTION # 51

Your embedded dataset in SAP Analytics Cloud has columns for Country, Region, City, and Customer Name. You want to aggregate measures for these columns as a single column. What can you do?

- A. Create a parent-child hierarchy in the dataset.
- B. Convert the embedded dataset to a model.
- C. Create a level-based hierarchy in the dataset.
- D. Create a group that includes the dimensions.

Answer: C

Explanation:

To aggregate measures for columns such as Country, Region, City, and Customer Name as a single column in an embedded dataset, creating a level-based hierarchy is the most effective approach. This type of hierarchy allows you to define a multi-level structure that represents the logical relationship between different geographical entities and customer names. By doing so, you can easily perform aggregations and analyze data at various levels of detail, from the broadest level (e.g., Country) down to the most specific one (e.g., Customer Name).
