Exam (PCNSE) exam preparation today.

Palo Alto Networks PCNSE certification is a highly recognized and sought-after certification in the cybersecurity industry. Palo Alto Networks Certified Network Security Engineer Exam certification validates that a security engineer has the necessary knowledge and skills to design, deploy, configure, maintain, and troubleshoot Palo Alto Networks next-generation firewalls and related products. Palo Alto Networks Certified Network Security Engineer Exam certification is intended for security engineers, system administrators, and support staff who work with Palo Alto Networks products.

The IT industry is constantly evolving, and with the rise of cyber threats, the demand for skilled security professionals has increased significantly. Palo Alto Networks, a leading cybersecurity company, offers the PCNSE Certification Exam to validate the skills and knowledge of security engineers. The PCNSE certification is a globally recognized certification that demonstrates an individual's expertise in designing, deploying, configuring, maintaining, and troubleshooting Palo Alto Networks security solutions.

## Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q252-Q257):

### NEW QUESTION # 252

An administrator is building Security rules within a device group to block traffic to and from malicious locations. How should those rules be configured to ensure that they are evaluated with a high priority?

- A. Create the appropriate rules with a Block action and apply them at the top of the Security Post-Rules.
- B. Create the appropriate rules with a Block action and apply them at the top of the Default Rules
- C. Create the appropriate rules with a Block action and apply them at the top of the Security Pre-Rules
- D. Create the appropriate rules with a Block action and apply them at the top of the local firewall Security rules.

**Answer: C**

Explanation:

Explanation

### NEW QUESTION # 253

Exhibit:

What will be the egress interface if the traffic's ingress interface is ethernet1/6 sourcing from 192.168.111.3 and to the destination 10.46.41.113 during the time shown in the image?

- A. ethernet1/3
- B. ethernet1/7
- C. ethernet1/6
- D. ethernet1/5

**Answer: A**

### NEW QUESTION # 254

Which Panorama mode should be used so that all logs are sent to, and only stored in, Cortex Data Lake?

- A. Management Only
- B. Log Collector
- C. Panorama
- D. Legacy

**Answer: A**

Explanation:

<https://docs.paloaltonetworks.com/panorama/10-2/panorama-admin/panorama-overview/panorama-models>

### NEW QUESTION # 255

What are the differences between using a service versus using an application for Security Policy match?

- A. Use of a "service" enables the firewall to take action after enough packets allow for App-ID identification
- B. There are no differences between "service" or "application" Use of an "application" simplifies configuration by allowing use of a friendly application name instead of port numbers.
- **C. Use of a "service" enables the firewall to take immediate action with the first observed packet based on port numbers Use of an "application" allows the firewall to take action after enough packets allow for App-ID identification regardless of the ports being used.**
- D. Use of a "service" enables the firewall to take immediate action with the first observed packet based on port numbers. Use of an "application" allows the firewall to take immediate action if the port being used is a member of the application standard port list

**Answer: C**

Explanation:

Explanation

<https://live.paloaltonetworks.com/t5/blogs/what-are-applications-and-services/ba-p/342508#> A service on the Palo Alto Networks firewall is a TCP or UDP port which port is open or closed and does not look beyond Layer 4. An application goes into Layer 7 inspection to ascertain which application is active in a data flow and will enforce "normal" behavior onto it, DNS Query

<https://live.paloaltonetworks.com/t5/blogs/what-are-applications-and-services/ba-p/342508#> Concept 1 A service on the Palo Alto Networks firewall is a TCP or UDP port, as it would be defined on a traditional firewall or access list. It simply defines which port is open or closed and does not look beyond Layer 4.

Concept 2

An application is what makes the Palo Alto Networks next-generation firewall so powerful; it goes into Layer

7 inspection to ascertain which application is active in a data flow and will enforce "normal" behavior onto it (e.g., a session identified as DNS that suddenly sends an SQL query is abnormal and will be blocked).

## NEW QUESTION # 256

Refer to Exhibit:

□

A firewall has three PDF rules and a default route with a next hop of 172.29.19.1 that is configured in the default VR. A user named XX-bes a PC with a 192.168.101.10 IP address.

He makes an HTTPS connection to 172.16.10.29.

What is the next hop IP address for the HTTPS traffic from Wills PC.

- **A. 172.20.20.1**
- B. 172.20.40.1
- C. 172.20.30.1
- D. 172.20.10.1

**Answer: A**
