SAP C-4H430-94

SAP Certified Application Associate - SAP Commissions Implementation

2

최신 SAP Certified Application Associate C-4H430-94 무료샘플문제 (Q21-Q26):

질문 #21

Which of the following most accurately describes a payee?

- A. An entity who is a user in SAP Commissions.
- B. An employee or external entity who receives incentive compensation.
- C. A unique job role in an organization.
- D. The assignment of a participant to a position for a period of time.

정답 B

질문 #22

Each Sales Rep receives 5% on each individual sale up to \$10,000. Individual sales over \$10,000 and up to \$15,000 are paid at 10%. Any individual sales over \$15,000 receive 15% commission. Which rule should you use to create this payment structure? Choose the correct answer.

- A. Per Credit Incentive Rule
- B. Bonus Incentive Rule
- C. Indirect Credit Rule
- D. Secondary Measurement Rule

정답 A

질문 #23

Which of the following tasks can be performed by a payee? Note: There are 2 correct answers to this question.

- A. Submit a dispute.
- B. Accept a compensation plan.
- C. Run Compensate and Pay.
- D. Create a dashboard.

정답 A,B

질문 #24

Which of the following are characteristics of Calendars? Note: There are 2 correct Answers to this question.

- A. You can have two rules with the same names, as long as they are on different Calendars.
- B. You can change the dates of a period after a Pipeline has been run without causing a disconnect in the results.
- C. Leaf periods on a Calendar CANNOT contain gaps or overlap.
- D. You CANNOT delete a period once a Pipeline has been run for that period.

ExamPassdump덤프공부가이드는 업계에서 높은 인지도를 자랑하고 있습니다. ExamPassdump제품은 업데이트가 가장 빠르고 적중율이 가장 높아 업계의 다른 IT공부자료 사이트보다 출중합니다. ExamPassdump의CompTIA인증 CNX-001덤프는 이해하기 쉽고 모든CompTIA인증 CNX-001시험유형이 모두 포함되어 있어 덤프만 잘 이해하고 공부하시면 시험패스는 문제없습니다.

CompTIA CNX-001 시험요강:

주제	소개
주제 1	• Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management.

주제 2	• Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance.
주제 3	• Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment.
주제 4	• Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively.

CNX-001 합격보장 가능 시험덤프 - CNX-001 최신 기출문제

ExamPassdump에서 출시한 CompTIA 인증 CNX-001 시험덤프는 ExamPassdump의 엘리트한 IT 전문가들이 IT 인증 실제 시험문제를 연구하여 제작한 최신버전 덤프입니다. 덤프는 실제 시험의 모든 범위를 커버하고 있어 시험 통과율이 거의 100%에 달합니다. 제일 빠른 시간 내에 덤프에 있는 문제만 잘 이해하고 기억하신다면 시험패스는 문제없습니다.

최신 CloudNetX CNX-001 무료 샘플문제 (Q18-Q23):

질문 # 18

A network administrator is configuring firewall rules to lock down the network from outside attacks. Which of the following should the administrator configure to create the most strict set of rules?

- A. Allow List
- B. Network security group
- C. File blocking
- D. URL filtering

정답: A

설명:

By explicitly permitting only known, approved traffic and blocking everything else by default, an allow-list policy enforces the strictest firewall posture.

질문 # 19

After a malicious actor used an open port in a company's lobby, a network architect needs to enhance network security. The solution must enable:

- * Security posture check
- * Auto remediation capabilities
- * Network isolation
- * Device and user authentication

Which of the following technologies best meets these requirements?

- A. 802.1X
- B. Microsegmentation

- C. NAC
- D. IPS

정답: C

설명:

Comprehensive and Detailed Explanation From Exact Extract:

Network Access Control (NAC) evaluates the posture of a device before allowing access to the network. It can enforce security policies, authenticate users and devices, and isolate or remediate non-compliant devices.

NAC is widely used in enterprise environments to secure access at the network edge, such as in guest or public areas.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Access Control and Posture Assessment":

"NAC provides device authentication, security posture validation, and can enforce automated remediation or quarantine actions based on policy compliance." Other options:

- * A. IPS detects and prevents known threats but does not perform access control or posture checks.
- * B. Microsegmentation isolates workloads but lacks posture checks and auto-remediation.

질문 # 20

A network architect is choosing design options for a new SD-WAN installation that has the following requirements:

All network traffic from the cloud must pass through inspection devices in a dedicated data center.

Ensure redundancy.

Centralize egress traffic.

Which of the following network topologies best meets these requirements?

- A. Point-to-point
- B. Star
- C. Partial mesh
- D. Hub-and-spoke

정답: D

설명:

A hub-and-spoke design sends all branch and cloud traffic into the central hub (your data center) for inspection, then back out, meeting the requirement for centralized egress and security inspection. By deploying multiple hub nodes and using dynamic path selection, you also achieve redundancy without losing the centralized control plane.

질문 # 21

A network architect is choosing design options for a new SD-WAN installation that has the following requirements:

* All network traffic from the cloud must pass through inspection devices in a dedicated data center.

* Ensure redundancy.

* Centralize egress traffic.

Which of the following network topologies best meets these requirements?

- A. Point-to-point
- B. Star
- C. Partial mesh
- D. Hub-and-spoke

정답: D

설명:

Comprehensive and Detailed Explanation From Exact Extract:

The Hub-and-Spoke topology is ideal for SD-WAN environments where traffic from branch offices or cloud workloads must route through a central location (the hub) for inspection, monitoring, or security enforcement.

This structure centralizes egress and allows for redundant spoke paths via the hub. It also simplifies control and enforces compliance policies.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "SD-WAN Topologies and Cloud Egress Strategies":

"In a hub-and-spoke topology, spokes (remote offices or cloud nodes) connect through a central hub, allowing for centralized egress, traffic inspection, and simplified routing." Other options:

- * A. Point-to-point doesn't scale and lacks centralized control.

- * C. Star topology is similar to hub-and-spoke but is more rigid and less suited for SD-WAN scalability.
- * D. Partial mesh allows direct spoke-to-spoke communication, bypassing centralized inspection.

질문 # 22

An organization's Chief Technical Officer is concerned that changes to the network using IaC are causing unscheduled outages. Which of the following best mitigates this risk?

- A. Making code changes to the master branch
- B. Adding review/approval steps to the CI/CD pipelines
- C. Forking the code repository before making changes
- D. Enforcing code review of the change by the author

정답: B

설명:

Introducing mandatory review and approval gates in your deployment pipelines ensures that every Infrastructure-as-Code change is peer-reviewed, tested, and explicitly signed off before going live, reducing the chance of unvetted code causing unexpected outages.

질문 # 23
