ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q67-Q72):

NEW QUESTION # 67

Match ECC Queue fields with their respective descriptions.

Fields:

1. Topic
2. Source
3. Queue
4. Payload

Descriptions:

- A: The IP address against which the discovery is to be run.
B: The message body in XML format.
C: An input/output indicator of this message.
D: The probe name that the MID server ran.

Response:

- A. 1-A, 2-D, 3-C, 4-B
- B. 1-C, 2-A, 3-D, 4-B
- **C. 1-D, 2-A, 3-C, 4-B**
- D. 1-D, 2-A, 3-B, 4-C

Answer: C

NEW QUESTION # 68

Which of the following choices are only used for the Application Pattern Type? (Choose two.)

- A. Identification Section
- **B. Run Order**
- C. CI Type
- **D. Operating System**

Answer: B,D

NEW QUESTION # 69

Different types of Operation Choices available on a pattern Designer.

Response:

- A. Query, Parse, Data, Action, Classify
- B. Query, Parse, Data, Action, Transform
- **C. Query, Parse, Data, Action**
- D. Query, Parse, Data, Transform

Answer: C

NEW QUESTION # 70

The image shows two screenshots from the ServiceNow Discovery interface. The top screenshot is titled "Reconciliation Definitions" and shows a table with the following data:

	Data Source	Applies to	Attributes	Active
<input type="checkbox"/>	Altiris	Windows Server [cmdb_ci_win_server]	name	true
<input type="checkbox"/>	OpenView	Windows Server [cmdb_ci_win_server]	name	true
<input type="checkbox"/>	ServiceNow	Windows Server [cmdb_ci_win_server]	name	true

The bottom screenshot is titled "Data Source Precedents" and shows a table with the following data:

	Applies to	Data Source	Order	Active
<input type="checkbox"/>	[cmdb_ci_win_server]	ServiceNow	100	true
<input type="checkbox"/>	[cmdb_ci_win_server]	OpenView	200	true
<input type="checkbox"/>	[cmdb_ci_win_server]	Altiris	300	true

Based on the following images, which choice best describes what occurs if Discovery sets the name attribute of a discovered Windows Server CI to 'Windows1' and then Altiris discovery runs detecting 'Windows2' for the name attribute on the same CI?

- A. The name of the CI does not populate with either discovery.
- **B. The name of the CI changes to 'Windows2'.**
- C. The CI is not discovered because Discovery is not listed in either image.
- D. The name of the CI stays 'Windows1'.

Answer: B

Explanation:

In ServiceNow Discovery, the reconciliation process is governed by precedence rules. These rules determine which data source's information will be retained if there are conflicts when multiple sources discover the same CI. In this case, Altiris has a higher order of precedence (300) compared to ServiceNow (100), as seen in the "Data Source Precedents" section of the image. Therefore, if Altiris discovers 'Windows2' for the name attribute on the same CI after ServiceNow sets it to 'Windows1', the name will change to 'Windows2' due to Altiris's higher precedence.

1: The explanation is inferred from understanding how reconciliation and data source precedents work in ServiceNow Discovery, though not directly quoted from specific documents. You can find more information on these topics in the following links:

Reconciliation

Data source precedents

NEW QUESTION # 71

What role is needed by the MID Server's user account to interact with a ServiceNow instance?

- A. discovery_admin
- B. mid_server
- C. sm_mid
- D. mid_discovery

Answer: B

Explanation:

The MID Server's user account must have the mid_server role to interact with a ServiceNow instance. This role allows the MID Server to access protected tables and perform discovery and orchestration tasks on behalf of the instance. The other roles are not related to the MID Server functionality. The discovery_admin role is for configuring and managing discovery, the sm_mid role is for using the Service Mapping MID Server, and the mid_discovery role is for running discovery probes and sensors.

References:

- * Setting up MID Server user and role
- * Configure Windows MID Server service credentials
- * Correcting MID Server Windows service account user and permissions
