quick, and proven way to pass the Splunk SPLK-1002 Exam Questions? If your answer is yes then download DumpsFree exam questions and start this journey today.

Splunk Core Certified Power User Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

A calculated field maybe based on which of the following?

- A. Extracted fields
- B. Lookup tables
- C. Fields generated within a search string
- D. Regular expressions

Answer: A

NEW QUESTION # 35

Which command is used to create choropleth maps?

- A. geostats
- B. cluster
- C. geom

Answer: C

NEW QUESTION # 36

Which of the following statements describes POST workflow actions?

- A. Configuration of a POST workflow action includes choosing a sourcetype.
- B. POST workflow actions can be configured to send email to the URI location.
- C. POST workflow actions can be configured to send POST arguments to the URI location.
- D. By default, POST workflow action are shown in both the event and field menus.

Answer: C

NEW QUESTION # 37

Which of the following objects can a calculated field use as a source?

- A. The tag field.
- B. A field added by an automatic lookup.
- C. The eventtype field.
- D. An alias of a field.

Answer: B

Explanation:

The correct answer is B. A field added by an automatic lookup.

A calculated field is a field that is added to events at search time by using an eval expression. A calculated field can use the values of two or more fields that are already present in the events to perform calculations. A calculated field can use any field as a source, as long as the field is extracted before the calculated field is defined¹.

An automatic lookup is a way to enrich events with additional fields from an external source, such as a CSV file or a database. An automatic lookup can add fields to events based on the values of existing fields, such as host, source, sourcetype, or any other extracted field². An automatic lookup is performed before the calculated fields are defined, so the fields added by the lookup can be used as sources for the calculated fields³.

Therefore, a calculated field can use a field added by an automatic lookup as a source.

NEW QUESTION # 38

When using timechart, how many fields can be listed after a by clause?

- A. because one field would represent the x-axis and the other would represent the y-axis.
- B. because timechart doesn't support using a by clause.
- C. because time is already implied as the x-axis.
- D. There is no limit specific to timechart.

Answer: C

Explanation:

Explanation

The timechart command is used to create a time-series chart of statistical values based on your search results². You can use the timechart command with a by clause to split the results by one or more fields and create multiple series in the chart². However, you can only list one field after the by clause when using the timechart command because time is already implied as the x-axis of the chart². Therefore, option B is correct, while options A, C and D are incorrect.

NEW QUESTION # 39

.....
