

NGFW-Engineer Fragenkatalog, NGFW-Engineer Ausbildungsressourcen

www.nwexam.com PDF

Section	Weight	Objectives
		- Use APIs to automate deployment - Manage third-party services to deploy NGFWs (e.g., Kubernetes, hypervisors, CSPs, Terraform, Ansible) - Use on-premises centralized management • Panorama • Templates and device groups • Pre- and post-ruleset - Build Application Command Center (ACC) dashboards and custom reports

What type of questions are on the Palo Alto NGFW-Engineer exams?

- Single answer multiple choice
- Multiple answer multiple choice
- Drag and Drop (DND)
- Router Simulation
- Testlet

NGFW-Engineer Practice Exam Questions.

Grab an understanding from these [Palo Alto NGFW-Engineer](#) sample questions and answers and improve your NGFW-Engineer exam preparation towards attaining a Next-Generation Firewall Engineer Certification. Answering these sample questions will make you familiar with the types of questions you can expect on the actual exam. Doing practice with Next-Generation Firewall Engineer questions and answers before the exam as much as possible is the key to passing the Palo Alto NGFW-Engineer certification exam.

Next-Generation Firewall Engineer Sample Questions:-

01. What is the function of a Certificate Revocation List (CRL) in a PKI?

- Lists expired certificates
- Lists certificates that have been revoked before their expiration date
- Lists all issued certificates
- Lists certificates pending renewal

Answer: b

02. How do Zone Protection Profiles enhance network security?

- By providing protection against flood attacks, reconnaissance scans, and packet-based threats

Palo Alto Networks NGFW-Engineer Prüfungsplan:

Thema	Einzelheiten
Thema 1	• PAN-OS Networking Configuration: This section of the exam measures the skills of Network Engineers in configuring networking components within PAN-OS. It covers interface setup across Layer 2, Layer 3, virtual wire, tunnel interfaces, and aggregate Ethernet configurations. Additionally, it includes zone creation, high availability configurations (active • active and active • passive), routing protocols, and GlobalProtect setup for portals, gateways, authentication, and tunneling. The section also addresses IPSec, quantum-resistant cryptography, and GRE tunnels.

Thema 2	• Integration and Automation: This section measures the skills of Automation Engineers in deploying and managing Palo Alto Networks NGFWs across various environments. It includes the installation of PA-Series, VM-Series, CN-Series, and Cloud NGFWs. The use of APIs for automation, integration with third-party services like Kubernetes and Terraform, centralized management with Panorama templates and device groups, as well as building custom dashboards and reports in Application Command Center (ACC) are key topics.
Thema 3	• PAN-OS Device Setting Configuration: This section evaluates the expertise of System Administrators in configuring device settings on PAN-OS. It includes implementing authentication roles and profiles, and configuring virtual systems with interfaces, zones, routers, and inter-VSYS security. Logging mechanisms such as Strata Logging Service and log forwarding are covered alongside software updates and certificate management for PKI integration and decryption. The section also focuses on configuring Cloud Identity Engine User-ID features and web proxy settings.

NGFW-Engineer Ausbildungsressourcen - NGFW-Engineer Prüfungsfrage

ZertPruefung ist eine Website, die den IT-Kandidaten die Schulungsunterlagen, die ganz speziell sind und den Kandidaten somit viel Zeit und Energie ersparen können, bietet. Unsere Prüfungsfragen und Antworten zur Palo Alto Networks NGFW-Engineer Zertifizierung sind den realen Themen sehr ähnlich. Mit Hilfe von den Simulationsprüfung von ZertPruefung können Sie ganz schnell die Palo Alto Networks NGFW-Engineer Prüfung 100% bestehen. Es ist doch wert, mit so wenig Zeit und Geld gute Resultate zu bekommen. Schicken Sie doch schnell die Schulungsunterlagen zur Palo Alto Networks NGFW-Engineer Prüfung von ZertPruefung in den Warenkorb.

Palo Alto Networks Next-Generation Firewall Engineer NGFW-Engineer Prüfungsfragen mit Lösungen (Q56-Q61):

56. Frage

What is the purpose of assigning an Admin Role Profile to a user in a Palo Alto Networks NGFW?

- A. Define granular permissions for management tasks.
- B. Enable multi-factor authentication (MFA) for administrator access.
- C. Allow access to all resources without restrictions.
- D. Restrict access to sensitive report data.

Antwort: A

Begründung:

Assigning an Admin Role Profile to a user in a Palo Alto Networks NGFW is used to define granular permissions for management tasks. This allows administrators to control what actions a user can perform on the firewall, such as configuration changes, monitoring, and logging. By assigning different admin roles, you can ensure that users have access only to the areas and tasks they need, enforcing the principle of least privilege.

57. Frage

A security team wants to block peer-to-peer file sharing applications even when those applications attempt to evade detection by using non-standard ports.

Which NGFW capability enables this control?

- A. Port-based access control
- B. Static access control lists
- C. Application signature and behavior analysis
- D. QoS traffic shaping

Antwort: C

Begründung:

NGFWs analyze traffic patterns and application signatures, allowing them to detect and block applications regardless of port usage.

58. Frage

Which two zone types are valid when configuring a new security zone? (Choose two.)

- A. Virtual Wire
- B. Tunnel
- C. Internal
- D. Intrazone

Antwort: A,B

Begründung:

When configuring a new security zone on a Palo Alto Networks firewall, the two valid zone types are:

Tunnel: A Tunnel zone is used for traffic that is associated with a VPN tunnel, such as IPSec tunnels. Traffic passing through a tunnel interface is classified into this zone. Virtual Wire: A Virtual Wire zone is used when a firewall operates in transparent mode (also known as Layer 2 mode). In this configuration, the firewall can inspect traffic without modifying the IP address structure of the network.

59. Frage

When configuring a Zone Protection profile, in which section (protection type) would an NGFW engineer configure options to protect against activities such as spoofed IP addresses and split handshake session establishment attempts?

- A. Protocol Protection
- B. Reconnaissance Protection
- C. Packet-Based Attack Protection
- D. Flood Protection

Antwort: C

Begründung:

Packet-Based Attack Protection examines IP, TCP, ICMP, IPv6, and ICMPv6 packet headers to drop packets with undesirable characteristics like IP spoofing or malformed TCP options that enable split handshakes.

60. Frage

An administrator plans to upgrade a pair of active/passive firewalls to a new PAN-OS release. The environment is highly sensitive, and downtime must be minimized.

What is the recommended upgrade process for minimal disruption in this high availability (HA) scenario?

- A. Isolate both firewalls from the production environment and upgrade them in a separate, offline setup. Reconnect them only after validating the new software version, resuming HA functionality once both units are fully upgraded and tested.
- B. Suspend the active firewall to trigger a failover to the passive firewall. With traffic now running on the former passive unit, upgrade the suspended (now passive) firewall and confirm proper operation. Then fail traffic back and upgrade the remaining firewall.
- C. Shut down the currently active firewall and upgrade it offline, allowing the passive firewall to handle all traffic. Once the active firewall finishes upgrading, bring it back online and rejoin the HA cluster. Finally, upgrade the passive firewall while the newly upgraded unit remains active.
- D. Push the new PAN-OS version simultaneously to both firewalls, having them upgrade and reboot in parallel. Rely on automated HA reconvergence to restore normal operations without manually failing over traffic.

Antwort: B

Begründung:

In an active/passive HA setup, the recommended process for upgrading involves minimizing downtime and ensuring traffic continuity by using the failover process:

Suspend the active firewall: This triggers a failover to the passive unit, making it the active unit.

Upgrade the former passive (now active) unit: With traffic now running on the previously passive unit, upgrade the suspended unit

while the active unit continues handling traffic.

Confirm proper operation: Once the upgrade is complete, verify that the upgraded unit is functioning properly.

Fail traffic back: Once the upgraded firewall is confirmed to be working, fail the traffic back to the original active unit and upgrade the remaining firewall.

61. Frage
