Huawei HCSA-Field-Intelligent Collaboration V1.0 Sample Questions (Q41-Q46):

NEW QUESTION # 41

What kinds of external ports does Huawei IdeaHub S2 support? (Select all that apply)

- A. HD-VI
- B. HDMI**
- C. 3G-SDI
- D. HD-AI

Answer: B

Explanation:

The Huawei IdeaHub S2 is designed with standard enterprise-grade connectivity for modern office environments.

* HDMI (D): This is the primary port type supported. The S2 typically features multiple HDMI inputs (for external PCs or cameras) and an HDMI output (for screen mirroring or dual-screen setups). It also includes USB-C (which supports DP alt mode), USB-A, and 3.5mm audio ports.

* Incorrect Options: HD-AI (A) , 3G-SDI (B) , and HD-VI (C) are specialized/proprietary ports found on Huawei's dedicated video conferencing "Box" series (like the Box 310/610) and professional cameras. The IdeaHub series focuses on standardized ports to ensure ease of use and compatibility with common office peripherals.

NEW QUESTION # 42

Which operating systems does Huawei IdeaHub S2 support for screen projection? (Select All that can apply)

- A. Windows**
- B. Mac**
- C. Android**
- D. iOS**

Answer: A,B,C,D

Explanation:

The Huawei IdeaHub S2 provides a universal projection ecosystem that supports all five major operating systems. It allows for seamless content sharing across:

* Android (A) and Windows (B): Supported via the IdeaShare App, IdeaShare Key, and native P2P (Peer-to-Peer) projection for 4K 30fps/60fps content.

* iOS (C) and macOS (D): Supported through the IdeaShare App and industry-standard protocols like AirPlay.

This cross-platform compatibility ensures that in any business or educational environment, participants can share their screens regardless of the device hardware they are using.

NEW QUESTION # 43

Huawei smart office lightweight integration with Huawei IdeaHub open SDK interface can adapt to various apps, offering up to 1080p remote meetings.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Huawei provides an Open SDK for the IdeaHub to allow third-party developers to integrate their own office or industry-specific applications. For "lightweight integration," the SDK allows these apps to invoke the IdeaHub's professional-grade camera and microphone hardware. The standard performance target for these third-party integrations is 1080p HD video, providing a professional conferencing experience even when using non-native apps. While deep hardware optimization (as seen with Huawei's own WeLink or Cloud Meeting) can push certain capabilities higher, 1080p is the verified standard for lightweight integrated remote meetings.

NEW QUESTION # 44

Which of the following statements about the Wi-Fi Direct projection feature of Huawei IdeaHub S2 is incorrect?

- A. Support reverse control
- B. It supports Wi-Fi 5 and Wi-Fi 6
- C. Based on Bluetooth
- D. No need to connect to the same Wi-Fi network

Answer: C

Explanation:

Wi-Fi Direct Projection (also known as P2P Projection) on the IdeaHub S2 uses Wi-Fi Peer-to-Peer technology to establish a direct high-speed data link between the source device (laptop/phone) and the IdeaHub.

* Why A is incorrect: While Bluetooth may be used for "discovery" (to find the IdeaHub when the user brings a device close to it), the actual projection technology is not based on Bluetooth. Bluetooth does not have the bandwidth required for 4K video transmission.

* Option B is correct: It supports "Touch Back," allowing users to control their PC from the IdeaHub screen.

* Option C is correct: The S2 features a Wi-Fi 6 chip but is backward compatible with Wi-Fi 5.

* Option D is correct: This is the primary advantage of Wi-Fi Direct; the two devices do not need to be on the same corporate LAN or Wi-Fi network.

NEW QUESTION # 45

Which AI algorithms does Huawei IdeaHub S2 support to improve voice quality? (Select All that can apply)

- A. DNN
- B. ADC
- C. ANS
- D. AEC
- E. AGC

Answer: A,C,D,E

Explanation:

The IdeaHub S2 utilizes a suite of intelligent audio processing algorithms to ensure clear communication:

* AEC (Acoustic Echo Cancellation): Eliminates the feedback of audio from the speakers into the microphones.

* AGC (Automatic Gain Control): Automatically adjusts the volume of the speaker's voice to a consistent level, regardless of their distance from the device.

* ANS (Automatic Noise Suppression): Uses AI to identify and filter out background noises like fans, air conditioners, or typing.

* DNN (Deep Neural Network): Specifically used for AI de-reverberation, allowing the system to remove echoic room reflections and make the speaker's voice sound as if they are in a professional studio environment.

ADC (Analog-to-Digital Converter) (D) is a standard hardware component used to convert electrical signals into data, but it is not

an AI algorithm.
