MB-500 Exam Braindumps: Microsoft Dynamics 365: Finance and Operations Apps Developer & MB-500 Actual Test Questions

All exam questions that contained in our MB-500 study engine you should know are written by our professional specialists with three versions to choose from the PDF, the Software and the APP online. In case there are any changes happened to the MB-500 Exam, the experts keep close eyes on trends of it and compile new updates constantly. It means we will provide the new updates of our MB-500 preparation dumps freely for you later after your payment.

To prepare for the Microsoft MB-500 Exam, candidates must have prior experience working with Dynamics 365 Finance and Operations applications. They should also have a strong understanding of programming concepts and experience in developing applications using Microsoft technologies such as .NET and SQL Server.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q87-Q92):

NEW QUESTION # 87

A company uses Dynamics 365 Finance.

You implement the SysOperation framework to create the following batch processes.

You need to configure the execution mode for each batch process.

Which execution modes should you use? To answer, drag the appropriate execution modes to the correct requirements. Each execution mode may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

NEW QUESTION # 88

A company implements Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

Customers place orders from the company website store or through sales representatives.

You create a Power Platform app to manage sales quotes for sales representatives who do not have direct access to the Finance and Supply Chain Management environment. The app must meet the following requirements:

Sales representatives must be able to create new customers.

Ensure that only approved products can be sold.

Be available when the sales representatives do not have internet access.

Web sales are imported nightly.

You need to determine a strategy to integrate apps.

What should you use? To answer, drag the appropriate options to the correct app features. Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Graphical user interface, application Description automatically generated

NEW QUESTION # 89

You have a Dynamics 365 Finance and Operations environment.

You have the following code: (Line numbers are included for reference only.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Yes

Class extension - Method wrapping and Chain of Command.

The functionality for class extension, or class augmentation, has been improved. You can now wrap logic around methods that are defined in the base class that you're augmenting. You can extend the logic of public and protected methods without having to use event handlers. When you wrap a method, you can also access public and protected methods, and variables of the base class. In this way, you can start transactions and easily manage state variables that are associated with your class.

Box 2: Yes

In the following example, the wrapper around doSomething and the required use of the next keyword create a Chain of Command (CoC) for the method. CoC is a design pattern where a request is handled by a series of receivers. The pattern supports loose coupling of the sender and the receivers

```
[ExtensionOf(classStr(BusinessLogic1))]
```

```
final class BusinessLogic1_Extension
```

```
{
```

```
str doSomething(int arg)
```

```
{
```

```
// Part 1
```

```
var s = next doSomething(arg + 4);
```

```
// Part 2
```

```
return s;
```

```
}
```

```
}
```

```
}
```

Box 3: Yes

Instance and static methods can be wrapped by extension classes. If a static method is the target that will be wrapped, the method in the extension must be qualified by using the static keyword.

Box 4: No

Wrapper methods must always call next.

Note: Wrapper methods in an extension class must always call next, so that the next method in the chain and, finally, the original implementation are always called. This restriction helps guarantee that every method in the chain contributes to the result.

In the current implementation of this restriction, the call to next must be in the first-level statements in the method body.

Here are some important rules:

Calls to next can't be done conditionally inside an if statement.

Calls to next can't be done in while, do-while, or for loop statements.

A next statement can't be preceded by a return statement.

Because logical expressions are optimized, calls to next can't occur in logical expressions. At runtime, the execution of the complete expression isn't guaranteed.

NEW QUESTION # 90

You are a Dynamics 365 Finance developer.

You launch the Performance Timer tool to troubleshoot performance issues with a business process.

You need to view the results from the tool.

What does the tool present? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: The number of open forms and ..(per second)

Forms - Forms will show how many forms are currently open, plus the rate at which they opened and closed (per second), and a set of counters, such as the total amount of created or closed forms.

Box 2: The number of open forms and ..(per second)

This should really be: Services Session provider - This is the total number of sessions created.

NEW QUESTION # 91

You are a Dynamics 365 Finance developer.

You have a report in an existing model that connects with the following objects:

In-memory table

Data provider class

Controller class

Contract class

The report is locked for modifications.

You need to create an extension of the in-memory table in a model and you add the new field to the extension.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

1 - Create a duplicate from the existing report controller class in the model. Update the class logic to point to the new report.

2 - Create an extension of the existing report controller class in the model. Update the class logic to point to the new report.

3 - Create a duplicate from the report in the model and add the new field on the report design

4 - Create a duplicate from the existing data provider class in the model. Update the class to fill the value of the newly added field.

NEW QUESTION # 92

.....

This version of the software is extremely useful. It may necessitate product license validation, but it does not necessitate an internet connection. If you have any issues, the ActualVCE is only an email away, and they will be happy to help you with any issues you may be having! This desktop MB-500 practice test software is compatible with Windows computers. This makes studying for your test more convenient, as you can use your computer to track your progress with each Microsoft MB-500 Mock Test. The software is also constantly updated, so you can be confident that you're using the most up-to-date version.
