Exam Dumps JN0-232 Demo & JN0-232 Exam Tips

We are committed to designing a kind of scientific JN0-232 study material to balance your business and study schedule. With our JN0-232 exam guide, all your learning process includes 20-30 hours. As long as you spare one or two hours a day to study with our laTest JN0-232 Quiz prep, we assure that you will have a good command of the relevant knowledge before taking the JN0-232 exam. What you need to do is to follow the JN0-232 exam guide system at the pace you prefer as well as keep learning step by step.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q75-Q80):

NEW QUESTION # 75

You want to show the effectiveness of your SRX Series Firewall content filter. Which operational mode command would you use in this scenario?

- A. show security web filtering status
- B. show security utm anti-virus status
- C. show security utm anti-spam status
- D. show security utm content-filtering statistics

Answer: D

Explanation:

The content filter effectiveness is verified using UTM content-filtering statistics, which display how content filtering policies are applied and what traffic has been inspected, allowed, or blocked by the filter.

NEW QUESTION # 76

Which two statements about security zones are correct? (Choose two.)

- A. You add a network interface to a security zone before it can send or receive traffic.
- B. Security zones control the type of exception traffic accepted by a network interface.
- C. Interfaces in the same security zone can use different routing instances.
- D. A security zone includes interfaces assigned to different routing instances.

Answer: A,B

Explanation:

A network interface must be assigned to a security zone before it is allowed to send or receive traffic through the SRX Series Firewall.

Security zones define and control exception traffic (such as host-inbound system services and protocols) that is permitted to or from interfaces within the zone.

NEW QUESTION # 77

Which two statements are correct about unified security policies? (Choose two.)

- A. Dynamic applications in unified security policies analyze traffic based on Layer 4 information.
- B. Dynamic applications in unified security policies analyze traffic based on Layer 7 information.
- C. Traffic that matches a unified policy will not be evaluated by traditional security policy.
- D. Traffic that matches a traditional policy will not be evaluated by unified security policy.

Answer: B,C

Explanation:

Unified security policies (USPs) provide integrated application-aware controls using AppID and extend traditional zone-based policy enforcement.

* Option A: Correct. If traffic matches a unified security policy, it is not re-evaluated by traditional security policies. Unified policies take precedence for matched flows.

* Option B: Incorrect. Traditional policies rely on Layer 3/4 attributes. Unified policies go deeper by leveraging AppID, which inspects traffic up to Layer 7.

* Option C: Incorrect. Traffic matching a traditional policy is unaffected by unified policy unless unified mode is explicitly configured for those flows.

* Option D: Correct. Dynamic application recognition in unified policies uses Layer 7 (application-layer) inspection via AppID.

Correct Statements: A and D

Reference: Juniper Networks - Unified Security Policies and AppSecure AppID, Junos OS Security Fundamentals.

NEW QUESTION # 78

Which two addresses are valid address book entries? (Choose two.)

- A. 191.168.203.0/24
- B. 153.146.0.145/255.255.0.255
- C. 203.150.108.10/24
- D. 173.145.5.21/255.255.255.0

Answer: C,D

Explanation:

The correct address book entries are:

173.145.5.21/255.255.255.0

203.150.108.10/24

Both of these entries represent a valid IP address and subnet mask combination, which can be used as an address book entry in a Juniper device.

NEW QUESTION # 79

You are asked to permit users to read Reddit posts but prevent them from posting any new content.

Which two actions would you perform to achieve this task? (Choose two.)

- **A. Enable micro-application services for application-identification.**
- B. Include micro-application objects in traditional security policies.
- C. Enable micro-application services at the zone level for application-tracking.
- **D. Include micro-application objects in unified security policies.**

Answer: A,D

Explanation:

To control specific application behaviors (like allowing Reddit reads but blocking posts), you must include micro-application objects in unified security policies, since only unified policies support granular AppID-based control.

You must enable micro-application services for application identification so the SRX can recognize and classify sub-functions within an application, such as "read" versus "post" actions on Reddit.

NEW QUESTION # 80

.....

There is a lot of data to prove that our JN0-232 practice guide has achieved great success. First of all, in terms of sales volume, our JN0-232 study materials are far ahead in the industry, and here we would like to thank the users for their support. Second, in terms of quality, we guarantee the authority of JN0-232 Study Materials in many ways. You can just have a look at the pass rate of the JN0-232 learning guide, it is high as 98% to 100% which is unique in the market.
