NEW QUESTION # 286

A customer is not getting the storage retention they had expected while using H.264 with an AXIS Q6034-E PTZ camera on a continuous guard tour. What is the most likely cause of the problem?

- A. The estimation was only planned for a 720p HDTV PTZ
- **B. Using continuous guard tour does not let H.264 save as much on the compression**
- C. Because most of the areas in the guard tour are empty, H.264 cannot save as much on the compression
- D. The estimations were done in MPEG-4 and they should change the AXIS Q6034-E to run in MPEG-4 instead of H.264

Answer: B

Explanation:

Continuous guard tours involve constant movement of the camera, which limits the effectiveness of H.264 compression. H.264 achieves high compression ratios by identifying and removing redundancies between frames, but continuous motion reduces these redundancies, leading to higher bit rates and, consequently, increased storage consumption. For more details, refer to Axis Communications' technical documentation on H.264 compression and PTZ camera operations.

NEW QUESTION # 287

Which of the following actions can be taken using the AXIS T8414 Installation Display? (Choose two)

- **A. Power up a PoE camera**
- B. Access a camera's home page
- C. Reset a camera to factory default values
- D. Read user documentation for cameras
- **E. Make snapshots**

Answer: A,E

NEW QUESTION # 288

Which setting would best adjust a hard yellow tint as shown in the pictures below?

- A. Image brightness
- B. Image contrast
- **C. White balance**
- D. Color saturation

Answer: C

Explanation:

The setting that would best adjust a hard yellow tint in the images is the white balance. Adjusting the white balance corrects color casts by accounting for the color temperature of the light source, thereby producing more natural colors in the image. In the example images, modifying the white balance would neutralize the yellow tint and restore accurate colors. Axis cameras have white balance settings that can be adjusted manually or set to automatic for optimal color representation. Further details can be found in Axis Communications' camera setup and image optimization documentation.
