

# Mule-Dev-301 PDF Dumps Files for Busy Professionals

ExamCost recognizes the acute stress the aspirants undergo to get trust worthy and authentic Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam study material. They carry undue pressure with the very mention of appearing in the Salesforce Mule-Dev-301 certification test. Here the ExamCost come forward to prevent them from stressful experiences by providing excellent and top-rated Salesforce Mule-Dev-301 Practice Test questions to help them hold the Salesforce Mule-Dev-301 certificate with pride and honor.

It is generally acknowledged that candidates who earn the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) certification ultimately get high-paying jobs in the tech market. Success in the Salesforce Certified MuleSoft Developer II (Mule-Dev-301) exam not only validates your skills but also helps you get promotions. To pass the Salesforce Certified MuleSoft Developer II test in a short time, you must prepare with Mule-Dev-301 Exam Questions that are real and updated. Without studying with Mule-Dev-301 actual questions, candidates fail and waste their time and money.

## **Valid Mule-Dev-301 Latest Dumps Files Supply you Latest-updated Exam Reference for Mule-Dev-301: Salesforce Certified MuleSoft Developer II to Study easily**

We attract customers by our fabulous Mule-Dev-301 certification material and high pass rate, which are the most powerful evidence to show our strength. We are so proud to tell you that according to the statistics from our customers' feedback, the pass rate of our Mule-Dev-301 exam questions among our customers who prepared for the exam with our Mule-Dev-301 Test Guide have reached as high as 99%, which definitely ranks the top among our peers. Hence one can see that the Mule-Dev-301 learn tool compiled by our company are definitely the best choice for you.

## **Salesforce Certified MuleSoft Developer II Sample Questions (Q40-Q45):**

### **NEW QUESTION # 40**

A Mule application uses API autodiscovery to access and enforce policies for a RESTful implementation.

- A. Any of the APIkit generate implement flows

- B. Nothing because flowRef is an optional attribute which can be passed runtime
- C. The name of the flow that has APIKit Console to receive all incoming RESTful operation requests.
- **D. The name of the flow that has HTTP listener to receive all incoming RESTful operation requests**

**Answer: D**

Explanation:

To use API autodiscovery to access and enforce policies for a RESTful implementation, flowRef must be set to the name of the flow that has HTTP listener to receive all incoming RESTful operation requests. This way, API autodiscovery can identify the API implementation and associate it with the corresponding API specification and policies in API Manager. The flow that has HTTP listener is usually the main flow that contains the APIKit Router. Reference: <https://docs.mulesoft.com/api-manager/2.x/api-auto-discovery-new-concept/#flowref>

#### NEW QUESTION # 41

Which type of cache invalidation does the Cache scope support without having to write any additional code?

- A. Write-through invalidation
- B. White-behind invalidation
- **C. Time to live**
- D. Notification-based invalidation

**Answer: C**

Explanation:

The Cache scope supports time to live (TTL) as a cache invalidation strategy without having to write any additional code. TTL specifies how long the cached response is valid before it expires and needs to be refreshed. The Cache scope also supports custom invalidation strategies using MEL or DataWeave expressions. Reference: [https://docs.mulesoft.com/mule-runtime/4.3/cache-scope#cache\\_invalidation](https://docs.mulesoft.com/mule-runtime/4.3/cache-scope#cache_invalidation)

#### NEW QUESTION # 42

Which pattern should be used to invoke multiple HTTP APIs in parallel and roll back failed requests in sequence?

- **A. Scatter-Gather as central Saga orchestrator for all API request with compensating actions for failing routes**
- B. VM queues as a reliability pattern with error handlers to roll back any requests
- C. A Parallel for Each scope with each HTTP request wrapped in a Try scope
- D. A database as a transactional outbox and an Until Successful router to retry any requests

**Answer: A**

Explanation:

To invoke multiple HTTP APIs in parallel and roll back failed requests in sequence, the developer should use a Scatter-Gather router as a central Saga orchestrator for all API requests with compensating actions for failing routes. A Scatter-Gather router executes multiple routes concurrently and aggregates the results. A Saga orchestrator coordinates a series of actions across different services and handles failures by executing compensating actions. Therefore, using a Scatter-Gather router as a Saga orchestrator allows invoking multiple HTTP APIs in parallel and rolling back any failed requests in sequence. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept> <https://docs.mulesoft.com/mule-runtime/4.3/saga>

#### NEW QUESTION # 43

Two APIs are deployed to a two-node on-prem cluster. Due to a requirements change, the two APIs must communicate to exchange data asynchronously.

- A. It is not possible to use the VM Connector since the APIs are running in a cluster mode and each mode has its own set of VM Queues
- B. Instead of using the VM Connector use <flow-ref> directly
- C. The VM Connector is used to inter-application communication, so it is not possible to use the VM Connector
- **D. If the two APIs use the same domain, the VM Connector can be leveraged**

**Answer: D**

Explanation:

To communicate asynchronously between two APIs deployed to a two-node on-prem cluster, the developer can use the VM Connector if the two APIs use the same domain. The VM Connector allows passing messages between different Mule applications within a single Mule runtime instance or across different instances using shared memory or persistent storage. If two APIs are deployed under the same domain, they can share resources such as VM queues and communicate asynchronously using VM Connector operations. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/vm-connector> <https://docs.mulesoft.com/mule-runtime/4.3/shared-resources>

#### NEW QUESTION # 44

Which statement is true when working with correlation IDS?

- A. The HTTP Listener regenerates correlation IDs regardless of the HTTP request
- B. The Anypoint MQ Connector automatically propagates correlation IDS
- C. The VM Connector does not automatically propagate correction IDS
- D. The HTTP Listener generates correlation IDS unless a correlation ID is received in the HTTP request

Answer: D

Explanation:

When working with correlation IDs, the HTTP Listener generates correlation IDs unless a correlation ID is received in the HTTP request. In that case, it propagates the received correlation ID throughout the flow execution. Correlation IDs are used to track events across different flows or applications. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

#### NEW QUESTION # 45

.....

Choose Mule-Dev-301 premium files, you will pass for sure. Each questions & answers of Mule-Dev-301 free training pdf are edited and summarized by our specialist with utmost care and professionalism. The Salesforce Mule-Dev-301 latest online test is valid and really trustworthy for you to rely on. The highly relevant content & best valid and useful Mule-Dev-301 Exam Torrent will give you more confidence and help you pass easily.
