Die USGBC LEED-Green-Associate Zertifizierung ist eine der hochwertigsten Zertifizierungen zwischen vielfältigen Prüfungen. Dieses Jahrhundert ist die hohe Entwicklungszeit der IT-Industrie. Deshalb können Sie die knappe Kandidaten in der Arbeitswelt. Und wie können wir USGBC LEED-Green-Associate Prüfungen bestehen? Sie sollen die Lernhilfe zur USGBC LEED-Green-Associate Zertifizierung von ZertSoft benötigen. Und es ist auch nötig, einen kürzen und leichten Weg zu finden. Und wir ZertSoft sind für Sie vorhanden. Und Wenn Sie ZertSoft auswählen, wählen Sie nämlich den Erfolg. Die LEED-Green-Associate Prüfungsfragen und Testantworten sind von ZertSoft IT-Eliten gesammelt. Und unsere Produkte sind die neuesten und hochqualitativsten.

USGBC LEED-Green-Associate Prüfungsplan:

Thema	Einzelheiten
Thema 1	Integrative Strategies: This section of the exam measures the skills of project managers and focuses on the integrative process in LEED projects. It includes understanding the roles of various team members and standards that support LEED, such as ASHRAE and ENERGY STAR guidelines. This section highlights the importance of collaboration and systems thinking in achieving sustainable design.
Thema 2	Sustainable Sites: This section of the exam measures the skills of landscape architects and focuses on on-site assessment and design strategies that reduce environmental impact. It includes topics like habitat conservation, rainwater management, and exterior lighting.
Thema 3	Project Surroundings and Public Outreach: This section of the exam measures the skills of community engagement specialists and covers the environmental impacts of buildings, green building codes, and the values of sustainable design. It also includes regional design considerations and public outreach strategies.

Thema 4	• Materials and Resources: This section of the exam measures the skills of sustainable materials specialists and focuses on reuse, life-cycle impacts, waste management, and environmentally preferable purchasing practices. It highlights the importance of material selection in reducing environmental impacts.
Thema 5	• Energy and Atmosphere: This section of the exam measures the skills of energy efficiency engineers and covers building loads, energy efficiency measures, and alternative energy practices. It emphasizes commissioning, energy auditing, and the use of renewable energy sources.

LEED-Green-Associate Zertifizierungsfragen, USGBC LEED-Green-Associate Prüfung Fragen

Seit der Gründung der ZertSoft wird unser System immer verbessert ---- Immer reichlicher Test-Bank, gesicherter Zahlungsgarantie und besserer Kundendienst. Heute sind die USGBC LEED-Green-Associate Prüfungsunterlagen schon von zahlreichen Kunden anerkannt worden. Nach Ihrem Kauf hört unser Kundendienst nicht aus. Wir werden Ihnen die Informationen über die Aktualisierungssituation der USGBC LEED-Green-Associate rechtzeitig. Wir sind auch verantwortlich für Ihre Verlust. Falls Sie nicht wunschgemäß die USGBC LEED-Green-Associate Prüfung bestehen, geben wir alle Ihre für USGBC LEED-Green-Associate bezahlte Gebühren zurück.

USGBC LEED Green Associate Exam LEED-Green-Associate Prüfungsfragen mit Lösungen (Q247-Q252):

247. Frage

The amount of landfill-destined waste generated during project construction can be reduced by requiring the general contractor to

- A. burn paper and cardboard materials on-site
- B. use contractor vehicles to disperse waste materials to multiple disposal sites within the project region
- **C. follow requirements for using dimensional construction materials, prefabrication or material D. efficient framing**
- D. take advantage of municipal waste pick-up to reduce the weight of the project's construction material scraps

Antwort: C

Begründung:

The amount of landfill-destined waste generated during project construction can be reduced by requiring the general contractor to follow requirements for using dimensional construction materials, prefabrication or material efficient framing. These methods reduce the amount of material waste by minimizing cutting, fitting, and trimming on site, and by using standardized or modular components that can be easily reused or recycled. The LEED Green Associate Candidate Handbook states that one of the strategies for achieving materials and resources efficiency is to "reduce construction waste through efficient framing techniques" [1, p. 15].

248. Frage

Implementation of green building strategies such as daylighting, passive cooling, high-efficiency mechanical systems and stack ventilation contributes to the reduction of what type of costs?

- **A. Life-cycle costs**
- B. Construction costs
- C. Initial costs
- D. Design costs

Antwort: A

249. Frage

A developer has asked the building designer to incorporate a landscape irrigation system using the building's graywater in order to

earn LEED points. Which is the most appropriate source of graywater for this use?

- **A. Bathroom sink**
- B. Urinal
- C. Janitor sink
- D. Toilet

Antwort: A

Begründung:

Explanation

Graywater refers to wastewater that is not heavily soiled, typically from bathroom sinks, showers, tubs, and washing machines. It does not include water from toilets (which is considered blackwater) or kitchen sinks (which can contain food waste). Graywater can be treated and reused for purposes like landscape irrigation, which can save water and earn LEED points. 250. Frage

If a project has achieved 53 points and six of eight prerequisites, for what level of certification does the project qualify?

- **A. None**
- B. Silver
- C. Gold
- D. Certified

Antwort: A

Begründung:

Explanation

To qualify for any level of LEED certification, a project must meet all the prerequisites and achieve a minimum number of points based on the rating system and the certification level¹. The prerequisites are mandatory requirements that must be met before a project can earn any points². The points are awarded for achieving optional credits that demonstrate environmental performance and innovation². The LEED rating system consists of five broad categories: Building Design and Construction (BD+C), Interior Design and Construction (ID+C), Building Operations and Maintenance (O+M), Neighborhood Development (ND), and Homes³. Each category has different adaptations for specific project types and scopes, such as Schools, Retail, Hospitality, Data Centers, Warehouses and Distribution Centers, Healthcare, etc³. Each adaptation has a different number of prerequisites and credits, and a different point scale for each certification level⁴. The certification levels are: Certified, Silver, Gold, and Platinum¹. The minimum points required for each level vary depending on the rating system and the adaptation, but generally range from 40 to 80 points¹. In this question, the project has achieved 53 points and six of eight prerequisites. This means that the project has failed to meet two prerequisites, which are mandatory requirements. Therefore, the project does not qualify for any level of LEED certification, regardless of the rating system or the adaptation. The answer is A.

None.

251. Frage

Which of the following represents a unit of carbon dioxide equivalent that is reduced, avoided, or sequestered to compensate for emissions occurring elsewhere?

- A. Calculator
- B. Demand response
- **C. Carbon offsets**
- D. Renewable energy

Antwort: C

Hence, the correct and verified answer is Carbon offsets.
