CompTIA - CY0-001 - CompTIA SecAI+ Certification Exam –High-quality Reliable Test Sims

The second format Easy4Engine also has a product support team available every time to help you out in any terms. And they will fix all of your problems on time. provides its users to study for Prepare for your CompTIA SecAI+ Certification Exam (CY0-001) exam is web-based practice exam. This format has all the features of desktop practice exam software for CompTIA CY0-001 exam preparation.

CompTIA SecAI+ Certification Exam Sample Questions (Q64-Q69):

NEW QUESTION # 64

Which log type is MOST useful for detecting DNS tunneling?

- A. DNS query logs
- B. Netflow logs only
- C. Authentication logs
- D. Firewall allow logs

Answer: A

Explanation:

DNS logs reveal abnormal query lengths and frequencies typical of tunneling.

NEW QUESTION # 65

A manufacturing company wants to use AI within its operations to improve the efficiency and accuracy of its processes. Which of the following should the organization do first to enable adoption and achieve the business objectives?

- A. Achieve International Organization for Standardization (ISO) 42001 certification.

- B. Introduce a generative adversarial network (GAN).
- C. Select a large language model (LLM).
- D. Hire a data and AI architect.

Answer: D

Explanation:

The first step in adopting AI to meet business objectives is to establish the right expertise. A data and AI architect can design the overall strategy, infrastructure, and data pipelines needed for effective AI integration, ensuring alignment with operational goals before selecting specific models or certifications.

NEW QUESTION # 66

A security analyst finds that the AI system is under a denial-of-wallet attack. Which of the following should the analyst enforce to protect the company? (Choose two.)

- A. Endpoint access controls
- B. Content delivery network (CDN)
- C. Model fine-tuning
- D. Output token controls
- E. Application programming interface (API) rate controls
- F. Modality controls

Answer: D,E

Explanation:

API rate controls limit the number of requests within a set timeframe, preventing attackers from overloading the system and driving up costs.

Output token controls restrict the length of responses, reducing unnecessary token usage that attackers might exploit in a denial-of-wallet attack.

NEW QUESTION # 67

Which of the following is the most concerning risk for a company that allows corporate end users to use public-facing large language models (LLMs)?

- A. Out-of-date acceptable use policies
- B. Inaccuracies due to hallucinations
- C. Malicious code generation
- D. Data security regulatory violations

Answer: D

Explanation:

The greatest concern with employees using public-facing LLMs is the potential exposure of sensitive or regulated corporate data. Submitting such information to external systems may violate data protection laws (e.g., GDPR, HIPAA), creating legal and compliance risks that outweigh issues like hallucinations or malicious outputs.

NEW QUESTION # 68

Which of the following is the best example of an AI model that is trained to identify multiple points from input using a neural network to provide output for authentication?

- A. Open Authorization (OAuth)
- B. Encryption key
- C. Facial recognition
- D. Bounding box

Answer: C

Explanation:
