

Reliable Reliable 2V0-16.25 Dumps Free bring you the best 2V0-16.25 Test Free for VMware VMware vSphere Foundation 9.0 Administrator

P.S. Free & New 2V0-16.25 dumps are available on Google Drive shared by TestsDumps: https://drive.google.com/open?id=1geMO-63Y074ait_S7ykVDDnWBNp38ERa

With the help of performance reports of VMware vSphere Foundation 9.0 Administrator (2V0-16.25) Desktop practice exam software, you can gauge and improve your growth. You can also alter the duration and VMware vSphere Foundation 9.0 Administrator (2V0-16.25) questions numbers in your practice tests. Questions of this VMware vSphere Foundation 9.0 Administrator (2V0-16.25) mock test closely resemble the format of the actual test. As a result, it gives you a feeling of taking the actual test.

Our 2V0-16.25 study materials are different from common study materials, which can motivate you to concentrate on study. Up to now, many people have successfully passed the 2V0-16.25 exam with our assistance. So you need to be brave enough to have a try. We can guarantee that you will love learning our 2V0-16.25 Preparation engine as long as you have a try on it. And you can free download the demos of our 2V0-16.25 learning guide on our website, it is easy, fast and convenient.

Latest Reliable 2V0-16.25 Dumps Free – Marvelous Test Free Provider for 2V0-16.25

We can offer further help related with our 2V0-16.25 study engine which win us high admiration. By devoting in this area so many years, we are omnipotent to solve the problems about the 2V0-16.25 practice questions with stalwart confidence. Providing services 24/7 with patient and enthusiastic staff, they are willing to make your process more convenient. So, if I can be of any help to you in the future, please feel free to contact us at any time on our 2V0-16.25 Exam Braindumps.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q57-Q62):

NEW QUESTION # 57

An administrator enables the VMware Cloud Foundation (VCF) Operations orchestrator Plug-in for VMware vSphere Web Client service on a VCF Operations orchestrator appliance.

How many vSphere instances can be integrated in the vSphere Client through the VCF Operations orchestrator plug-in?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

The VCF Operations Orchestrator Plug-in for VMware vSphere Web Client allows orchestration workflows directly in the vSphere Client.

* However, only one vSphere instance can be integrated at a time with the vSphere Client via this plug-in.

* This limitation ensures a consistent, single orchestration endpoint per vSphere Client environment.

Other options (8, 10, 15) apply to scaling of vCenter or data sources but not to the Orchestrator Plug-in integration.

References:

VMware Cloud Foundation 9.0.1 - Orchestrator Plug-in Integration Limits

VMware Docs: vRealize Orchestrator Plug-in for vSphere Web Client

NEW QUESTION # 58

The security team has requested that high-sensitivity workloads be protected using Confidential Computing in your VMware vSphere Foundation (VVF) 9.0 environment. These workloads handle regulated data that must be isolated from the hypervisor and other tenants, even when running on the same ESX host.

The vSphere administrator is responsible for ensuring that only trusted hosts are used and that virtual machines are configured with hardware-enforced memory isolation.

Which two configurations must you implement to support Confidential Computing for these workloads?

(Choose two.)

- **A. Enable AMD SEV-SNP or Intel TDX support in the host BIOS and confirm compatibility in vSphere.**
- B. Configure Encrypted vMotion with "Required" mode for the VM.
- **C. Enable vSphere Trust Authority and set the Confidential Computing flag.**
- D. Create virtual machines with hardware version 22 and set the Confidential Computing flag.
- E. Use TPM 2.0 on the guest OS to generate attestation reports for VM launch.

Answer: A,C

Explanation:

For Confidential Computing in vSphere 9.0:

* Hardware Memory Isolation: Requires AMD SEV-SNP (Secure Encrypted Virtualization - Secure Nested Paging) or Intel TDX (Trust Domain Extensions) enabled in the host BIOS and supported by ESXi. (C)

* Trusted Hosts: Must use vSphere Trust Authority (vTA) to ensure that only verified, secure hosts run Confidential VMs. The VM must have the Confidential Computing flagset. (E) Other options:

* A. VM Hardware version 22# Required for new features, but Confidential Computing specifically requires hardware + vTA.

* B. TPM 2.0 guest OS attestation# Not used for Confidential Computing, that's host-based attestation.

* D. Encrypted vMotion Required# Recommended for secure vMotion, but not sufficient for Confidential Computing.

VMware Docs: vSphere with AMD SEV-SNP and Intel TDX

NEW QUESTION # 59

What is the benefit of enabling lockdown mode on VMware ESX hosts?

- A. Increases CPU and memory resources available to virtual machines (VMs).
- **B. Restricts direct access to the ESX host, enhancing security.**
- C. Improves network performance.
- D. Simplifies the management of virtual machines.

Answer: B

Explanation:

Lockdown Mode on ESXi hosts is a security feature that restricts direct login to the ESXi host.

* Once enabled, administrators must manage the host through vCenter Server instead of direct DCUI/SSH access (except for exception users).

* This prevents unauthorized local access and improves overall security compliance.

Other options:

* A. Improves network performance# Not related.

* C. Increases CPU/memory for VMs# Not related.

* D. Simplifies VM management# It actually makes direct management more restricted.

NEW QUESTION # 60

An administrator needs to ensure that only specific users can manage the virtual machines (VM) in a specific VMware vCenter folder.

Which three steps are required to accomplish this? (Choose three.)

- **A. Apply the role to the specific vCenter folder.**
- B. Create a datastore cluster.
- C. Add the identity source to vCenter.
- **D. Assign the new role to the appropriate users/groups.**
- **E. Create a new role in vCenter with VM management permissions.**

Answer: A,D,E

Explanation:

To ensure that only specific users can manage VMs in a specific VMware vCenter folder, the following three steps are required:

* Create a new role in vCenter with VM management permissions (Answer B): You must define a custom role tailored to managing VMs, which includes permissions such as powering on/off VMs, editing VM settings, and accessing consoles. This role must include the appropriate privileges under the

"Virtual machine" category in vCenter permissions.

* Apply the role to the specific vCenter folder (Answer C): The custom role needs to be applied directly to the target vCenter folder. This enables scope-based access control, where permissions are applied only to VMs within that folder.

* Assign the new role to the appropriate users/groups (Answer A): After creating the role and applying it to the folder, the role must be associated with the correct users or groups. This step uses the vCenter Server's identity source integration to assign roles.

Why the other options are incorrect:

* D. Add the identity source to vCenter: This is a prerequisite step for any role assignment but is not directly required in this specific scenario if the identity source is already configured.

* E. Create a datastore cluster: This is unrelated to managing VM access. Datastore clusters pertain to storage management and are not involved in user permissions or role assignments.

NEW QUESTION # 61

An organization uses VMware Cloud Foundation (VCF) Operations to monitor and troubleshoot issues within a VMware vSphere Foundation (VVF) environment.

As part of the root cause analysis following a recent critical event, the administrator determined that specific log messages on a host clearly identified the problem.

What should the administrator implement to provide additional data to help troubleshoot in the future?

- A. VCF Operations Diagnostics
- **B. VCF Operations for logs**
- C. VCF Operations Management Pack for VCF
- D. VCF Automation

Answer: B

Explanation:

When troubleshooting critical events in a VMware vSphere Foundation (VVF) environment, logs are essential for root cause analysis.

- * In the given scenario, the administrator identified that specific log messages on a host clearly pinpointed the issue.
- * To enhance future troubleshooting, the best approach is to implement VCF Operations for Logs.
- * This enables centralized log collection, log-based alerts, and advanced queries, making it easier to correlate issues across infrastructure.

Other options like VCF Operations Diagnostics focus on proactive health checks and findings, while Management Pack for VCF extends observability but does not provide raw log insights. VCF Automation is unrelated to troubleshooting logs.
