

# Reliable C1000-189 Test Blueprint & C1000-189 Valid Dumps Sheet

What's more, part of that PrepPDF C1000-189 dumps now are free: [https://drive.google.com/open?id=1LOHoZVEE4\\_IM073S0SMHEWf7C1C5vcuZ](https://drive.google.com/open?id=1LOHoZVEE4_IM073S0SMHEWf7C1C5vcuZ)

To ensure a more comfortable experience for users of C1000-189 test material, we offer a thoughtful package. Not only do we offer free demo services before purchase, we also provide three learning modes for users. Even if the user fails in the IBM Instana Observability v1.0.277 Administrator - Professional exam dumps, users can also get a full refund of our C1000-189 quiz guide so that the user has no worries. With easy payment and thoughtful, intimate after-sales service, believe that our C1000-189 Exam Dumps will not disappoint users. Last but not least, our worldwide service after-sale staffs will provide the most considerable and comfortable feeling for you in twenty -four hours a day, as well as seven days a week incessantly.

To pass the C1000-189 exam is not an easy task. It is a challenging exam. However, proper planning and preparation with C1000-189 exam questions can enable you to pass the C1000-189 exam easily. As far as the IBM C1000-189 Practice Test are concerned, these C1000-189 Practice Test questions are designed and verified by IBM C1000-189 exam trainers. So you rest assured that with C1000-189 exam real questions you can pass IBM Instana Observability v1.0.277 Administrator - Professional C1000-189 exam easily.

## **PrepPDF IBM C1000-189 Exam Dumps Preparation Material is Available in the following easy-to-use Formats**

We will be happy to assist you with any questions regarding our products. Our IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) practice exam software helps to prepare applicants to practice time management, problem-solving, and all other tasks on the standardized exam and lets them check their scores. The IBM C1000-189 Practice Test results help students to evaluate their performance and determine their readiness without difficulty.

## **IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q55-Q60):**

### NEW QUESTION # 55

Which environment requires an air-gapped Instana installation?

- A. An environment with high-speed internet connectivity
- B. An environment with firewall and proxy restrictions that disable access to Instana's auto update
- C. An environment that allows unrestricted data transfer internally
- **D. An environment with restricted or no access to any external network or internet**

**Answer: D**

Explanation:

According to the IBM Instana Observability documentation, an air-gapped installation is required when your environment is disconnected from the internet or has no access to external networks. The documentation states: "Air-gapped and restricted environments require deploying Instana without any connection to public repositories or backend services, assuring full isolation for compliance and regulatory requirements." The air-gapped setup ensures sensitive data or system configurations are never exposed outside the organization's internal trusted boundaries, making it mandatory for government, defense, or tightly regulated industries. Standard installation processes, including auto-update features and remote license verification, are replaced in air-gapped deployments with manual artifact and key management, as file transfers and package updates must be handled strictly within the controlled environment. The option described in B (high-speed internet) or D (unrestricted internal transfer) does not trigger air-gapping, while option A may require proxy or firewall configuration but is not entirely air-gapped unless full external access is blocked.

### NEW QUESTION # 56

When installing the Instana host agent on Kubernetes, which option is valid?

- **A. Operator**
- B. Homebrew
- C. Binary
- D. RPM

**Answer: A**

Explanation:

The Instana Operator is the officially recommended and supported method for deploying the Instana host agent on Kubernetes clusters. The IBM Instana Observability documentation states, "The recommended method to install the Instana agent on Kubernetes clusters is via the Instana Operator, which uses CustomResources to simplify lifecycle management." The Operator pattern in Kubernetes automates not just installation, but also upgrades, configuration, and management of agents across the entire cluster. This ensures security and reliability because the Operator reacts to cluster changes and can self-heal agent deployments. Other install options such as Homebrew, direct binary, or RPM are for traditional VM or bare-metal hosts-not for orchestrated container environments like Kubernetes. Only with the Operator does Instana support automated scaling, configuration through CRDs, and native Kubernetes best practices. Helm charts are also often involved in configuring the Operator, further streamlining agents' deployment in public, private, or hybrid cloud clusters.

### NEW QUESTION # 57

Which SDK can be used for Instana HTTP tracing?

- A. Haskell
- **B. Trace Web**
- C. Configure Web
- D. Programmatic Web

**Answer: B**

Explanation:

IBM explicitly identifies Trace Web SDK as the framework component for implementing HTTP tracing within Instana's observability ecosystem. The latest content in the IBM Instana documentation (v1.0.307, aligning to v1.0.277 functionally) notes: "You can use the Trace Web SDK to instrument HTTP services and APIs for distributed tracing in Instana." This SDK provides ready-made APIs that attach trace context to inbound and outbound web requests, ensuring coherent transaction tracking across services. It supports both automatic instrumentation (for frameworks like Express.js, Django via agents) and manual control where developers

call startTrace and finishTrace operations as shown in examples. Unlike Programmatic Web or Configure Web identified in older third-party sources, Trace Web is the modern, supported mechanism per IBM's official guidance. Haskell is unsupported as an SDK target. Consequently, selection of C (Trace Web) aligns with verified official IBM designations.

#### NEW QUESTION # 58

Which statement best describes BeeInstana?

- A. A Kubernetes operator that requires high-performing data stores and a distributed data store cluster.
- B. It is a metric database used to perform complex metric queries
- C. An operator that can be used only on self-hosted deployments that have data stores installed
- D. An operator that can be used to install Instana on Kubernetes

**Answer: A**

Explanation:

BeeInstana is identified in Instana's documentation as the core Kubernetes operator driving distributed installation and management of Instana components. The documentation defines: "BeeInstana is a Kubernetes operator that requires robust, high-performing distributed data stores and manages Instana deployment complexity, resource allocation, and scaling within large clusters." By leveraging Kubernetes-native constructs, BeeInstana orchestrates Instana backend, UI, sensors, and streaming components-ensuring reliable, scalable deployments for enterprise settings. The operator orchestrates failover, recovery, and persistent storage management, supporting self-hosted and hybrid installations. While it is associated with metric data handling, its main role is orchestration and operational management based on distributed database infrastructures. Simple operator installation (A, D) does not capture its full role, and describing BeeInstana as only a metric database (B) misrepresents its architectural function in Instana's platform lifecycle.

#### NEW QUESTION # 59

Which two methods can Instana administrators use to create an API token?

- A. Sensor-specific API token
- B. JSON Web tokens
- C. Team API token
- D. Personal API tokens
- E. Unit-specific API tokens

**Answer: C,D**

Explanation:

IBM Instana supports two primary methods for creating API tokens necessary for secure automation and integration: Team API tokens and Personal API tokens. The official documentation states: "API tokens for REST API access can be generated either on a per-user (personal) basis, or at the team level for shared automation use." Personal tokens are created from the user profile menu and scoped to an individual's permissions, supporting traceability and revocation. Team tokens are created under team or group settings and represent organizational integrations or CI/CD pipeline automation. JSON Web Tokens (A) are an industry token standard but not a creation flow in Instana. Unit- or Sensor-specific tokens are not supported (C, D); all automation integrations must use Personal or Team tokens, which are easily managed and rotated via the web UI for improved security hygiene.

#### NEW QUESTION # 60

.....

Our company abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest real dumps. The IBM Instana Observability v1.0.277 Administrator - Professional exam dumps have summarized some types of questions in the qualification examination, so that users will not be confused when they take part in the exam, to have no emphatic answers. It can be said that the template of these questions can be completely applied. The user only needs to write out the routine and step points of the C1000-189 test material, so that we can get good results in the exams.
