Different version boasts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of Plat-Admn-301 guide torrent is printable and boasts instant access to download. You can learn at any time, and you can update the Plat-Admn-301 Exam Questions freely in any day of one year. It provides free PDF demo. You can learn the APP online version of Plat-Admn-301 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Salesforce Certified Platform Administrator II test guide to prepare the exam.

Salesforce Certified Platform Administrator II Sample Questions (Q54-Q59):

NEW QUESTION # 54

When an Account has more than five open opportunities over US\$10,000, the sales rep should have an option on the Account page to start the escalation process to allocate additional resources.

Which two configurations should the administrator create?

Choose 2 answers

- A. Dynamic Forms
- B. Roll-Up Summary field
- C. Component Visibility filter
- D. Formula field

Answer: A,D

Explanation:

Formula field and Dynamic Forms should be created to meet the requirements because a formula field can be used to count the number of open opportunities over US\$10,000 related to an account using a roll-up summary filter condition, and Dynamic Forms can be used to display or hide a component on an account page based on a visibility filter using the formula field value. NEW QUESTION # 55

The administrator at AW Computing implements multi-factor authentication using the Salesforce Authenticator app downloaded on company-provided iPhones. A sales rep breaks their phone and needs to update an opportunity record.

How should the administrator grant access for the sales rep?

- A. Add the sales rep's IP address to the trusted IP ranges.
- B. Delegate multi-factor identification to the sales rep.
- C. Generate a temporary identity verification code for the rep.
- D. Instruct the sales rep to log in from the company's VPN.

Answer: C

Explanation:

To grant access for the sales rep who broke their phone and needs multi-factor authentication using Salesforce Authenticator app, the administrator can generate a temporary identity verification code for them. This code allows users who don't have their verification method available to log in securely without compromising their account security. References:

NEW QUESTION # 56

An administrator would like to know if any other administrators or delegated administrators are using the Log In As a User feature. Where the administrators should be using the Log In As a User feature.

- A. Setup Audit Trail
- B. Grant Account Login Access
- C. Login History
- D. Connected App Usage

Answer: A

Explanation:

The Setup Audit Trail is a tool that allows you to view and download a log of changes made in your org's Setup area. The log shows up to 20 fields of information for each change, such as who made it, when it was made, what type of change it was, and what values were changed. You can use the Setup Audit Trail to track configuration changes directly in production and identify any unauthorized or problematic changes. One of the changes that the Setup Audit Trail tracks is when a user grants login access to another user. This means that you can use the Setup Audit Trail to see if any other administrators or delegated administrators are using the Log In As a User feature. NEW QUESTION # 57

The sales team at Cloud Kicks is noticing that sales reps are misusing the new Screen Flow tool for data entry, since they are viewed the initial screen after clicking finish.

What should the administrator do to fix this?

- A. Use a lightning action to redirect the user
- B. Create a new flow to redirect the user when the other flow finishes.
- C. Add a trigger to redirect the user to a new page.
- D. Update the flow with a local redirect action.

Answer: D

Explanation:

A lightning action is a type of quick action that can invoke a Lightning component, a Visualforce page, or a URL. The administrator can use a lightning action to redirect the user to a different page after they finish the screen flow. This way, the user will not see the initial screen again and will not misuse the flow tool.

NEW QUESTION # 58

What are three options available to the administrator to help with this issue? Choose 3 answers

- A. Remove some of the fields displayed.
- B. Convert all Process builders to flows.
- C. Move some page components behind a tab.
- D. Reduce the number of related lists displayed.
- E. Deactivate unnecessary validation rules.

Answer: A,C,D

Explanation:

Move some page components behind a tab, remove some of the fields displayed, and reduce the number of related lists displayed are three options available to the administrator to help with this issue. Moving some page components behind a tab can help reduce the loading time of a record page by hiding some components until they are needed by the user. Removing some of the fields displayed can help reduce the loading time of a record page by minimizing the number of queries and calculations that need to be performed when rendering the page. Reducing the number of related lists displayed can help reduce the loading time of a record page by limiting the amount of data that needs to be retrieved and displayed on the page

NEW QUESTION # 59

.....
