AWS-Certified-Developer-Associate Reliable Test Simulator, AWS-Certified-Developer-Associate Reliable Test Question

The AWS-Certified-Developer-Associate pdf format of the ActualCollection product is easy-to-use. It contains actual AWS Certified Developer Associate Exam (DVA-C02) (AWS-Certified-Developer-Associate) exam questions. You can easily download and use Amazon AWS-Certified-Developer-Associate pdf on laptops, tablets, and smartphones. ActualCollection regularly updates AWS-Certified-Developer-Associate Exam Questions' pdf version so that you always have the latest material. Furthermore, the Amazon AWS-Certified-Developer-Associate pdf can be printed enabling paper study.

The Amazon AWS-Certified-Developer-Associate exam consists of 65 multiple-choice and multiple-response questions that must be completed within 130 minutes. The AWS Certified Developer - Associate exam is available in multiple languages and is administered at proctored testing centers worldwide or through online proctoring. Candidates who pass the exam receive an AWS-approved certification that is valid for two years.

Amazon AWS-Developer certification exam is designed for developers who use Amazon Web Services (AWS) to develop and maintain applications. AWS Certified Developer Associate Exam (DVA-C02) certification validates the skills and knowledge required to design, develop, deploy and debug cloud-based applications using AWS. It is intended for individuals who have one or more years of experience developing and maintaining AWS-based applications.

Amazon AWS-Developer Certification Exam, also known as the AWS Certified Developer - Associate Exam, is a certification exam designed to test the skills and knowledge of developers working with Amazon Web Services (AWS). AWS-Certified-Developer-Associate Exam is aimed at professionals who have experience in developing and maintaining AWS-based applications,

and are looking to demonstrate their proficiency in using AWS services and tools to build and deploy scalable, reliable, and secure applications.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q80-Q85):

NEW QUESTION # 80

Developer is creating an AWS Lambda function to process a stream of data from an Amazon Kinesis Data Stream. When the Lambda function parses the data and encounters a missing field, it exits the function with an error. The function is generating duplicate records from the Kinesis stream. When the Developer looks at the stream output without the Lambda function, there are no duplicate records.

What is the reason for the duplicates?

- A. The Lambda function did not handle the error, and the Lambda service attempted to reprocess the data.
- **B. The Lambda function did not advance the Kinesis stream pointer to the next record after the error.**
- C. The Lambda event source used asynchronous invocation, resulting in duplicate records.
- D. The Lambda function is not keeping up with the amount of data coming from the stream.

Answer: B

NEW QUESTION # 81

A company maintains a REST service using Amazon API Gateway and the API Gateway native API key validation. The company recently launched a new registration page, which allows users to sign up for the service. The registration page creates a new API key using CreateApiKey and sends the new key to the user.

When the user attempts to call the API using this key, the user receives a 403 Forbidden error. Existing users are unaffected and can still call the API.

What code updates will grant these new users access to the API?

- A. The importApiKeys method must be called to import all newly created API keys into the current stage of the API.
- B. The updateAuthorizer method must be called to update the API's authorizer to include the newly created API key.
- **C. The createUsagePlanKey method must be called to associate the newly created API key with the correct usage plan.**
- D. The createDeploymer.t method must be called so the API can be redeployed to include the newly created API key.

Answer: C

NEW QUESTION # 82

A developer is working on an AWS Lambda function that accesses Amazon DynamoDB. The Lambda function must retrieve an item and update some of its attributes, or create the item if it does not exist. The Lambda function has access to the primary key.

Which IAM permissions should the developer request for the Lambda function to achieve this functionality?

- A. dynamodb:DeleteItem
dynamodb:GetItem
dynamodb:PutItem
- **B. dynamodb:GetRecords
dynamodb:PutItem
dynamodb:updateTable**
- C. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:DescribeTable
- D. dynamodb:UpdateItem
dynamodb:GetItem
dynamodb:PutItem

Answer: B

Explanation:

NEW QUESTION # 83

An advertising company has a dynamic website with heavy traffic. The company wants to migrate the website infrastructure to AWS to handle everything except website development. Which solution BEST meets these requirements?

- A. Deploy the website code in an AWS Elastic Beanstalk environment. Use Auto Scaling to scale the numbers of instances.
- B. Use Amazon S3 to host the website. Use Amazon CloudFront to deliver the content at scale.
- C. Launch multiple Amazon Lightsail instances behind a load balancer. Set up the website on those instances.
- D. Use AWS VM Import to migrate a web server image to AWS. Launch the image on a compute-optimized Amazon EC2 instance.

Answer: A

Explanation:

Explanation/Reference: <https://aws.amazon.com/elasticbeanstalk/>

NEW QUESTION # 84

A company maintains an application responsible for processing several thousand external callbacks each day. The company's System administrators want to know how many callbacks are being received on a rolling basis, and they want this data available for 10 days.

The company also wants the ability to issue automated alerts if the number of callbacks exceeds the defined thresholds.

What is the MOST cost-effective way to address the need to track and alert on these statistics?

- A. Push callback data to Amazon CloudWatch as a custom metric and use the CloudWatch alerting mechanisms to alert System Administrators.
- B. Push callback data to an Amazon RDS database that can be queried to show historical data and to alert on exceeded thresholds.
- C. Push callback data to AWS X-Ray and use AWS Lambda to query, display, and alert on exceeded thresholds.
- D. Push callback data to Amazon Kinesis Data Streams and invoke an AWS Lambda function that stores data in Amazon DynamoDB and sends the required alerts.

Answer: D

NEW QUESTION # 85
