156-590 Latest Exam Pass4sure, Reliable 156-590 Exam Braindumps

Don't need a lot of time and money, only 30 hours of special training, and you can easily pass your first time to attend CheckPoint Certification 156-590 Exam. Prep4cram are able to provide you with test exercises which are closely similar with real exam questions.

CheckPoint Check Point Certified Threat Prevention Specialist (CTPS)

Sample Questions (Q53-Q58):

NEW QUESTION # 53

What is the default Anti-Virus protected scope interface settings?

- A. DMZ
- **B. External**
- C. All
- D. External and DMZ

Answer: B

Explanation:

The correct answer is C. External . Anti-Virus protected scope settings define which traffic direction and interface types are sent for file inspection. Check Point explains that these settings are based on interface type, such as internal or external, and traffic direction, such as incoming or outgoing. In the Anti-Virus Protected Scope section, Check Point defines the option Inspect incoming files from and lists interface choices including External , External and DMZ , and All . The External choice means the gateway inspects incoming files from external interfaces, while files from DMZ and internal interfaces are not inspected.

The default exam answer is therefore External: the baseline Anti-Virus behavior focuses on inbound files arriving from untrusted external interfaces, which is the most common malware-introduction path for perimeter deployments. Option A is too narrow because DMZ alone would ignore Internet-to-user inbound exposure. Option B expands inspection to DMZ traffic, which is valid as a configuration choice but not the default answer. Option D is broader still and increases inspection coverage and resource use, but it is not the default protected-scope setting in this question. Reference topics: Anti-Virus Settings, Protected Scope, interface topology, incoming file inspection, External interface classification.

NEW QUESTION # 54

Task: Validate Anti-Virus updates are recent.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Use SmartConsole > Gateways > Threat Prevention > Updates.
- 2- Confirm update timestamp is recent.
- 3- SSH into Gateway and run cpstat anti-virus.
- 4- Run: cat \$FWDIR/tmp/antivirus_status.xml to verify signature version.
- 5- Confirm no update errors in \$FWDIR/log/antivirus_update.elg.

NEW QUESTION # 55

Task: Create a custom Threat Prevention profile that includes strict IPS enforcement.

Answer:

Explanation:

See the Explanation.Explanation:

- 1- Open Threat Prevention > Profiles > New Profile.
- 2- Name the profile, select "Strict" mode for IPS.
- 3- Enable Prevent for High and Medium confidence levels.
- 4- Optionally, enable protections for server-side protections.
- 5- Save and assign this profile in your Threat Prevention policy.

NEW QUESTION # 56

What does the HealthCheck (HCP) tests include?

- A. Assess status of SmartEvent System
- **B. Assess Health of System**
- C. Assess Health of Console Connections

- D. Assess Security of System

Answer: B

Explanation:

The correct answer is A. Assess Health of System. HealthCheck Point, commonly referred to as HCP, is Check Point's self-updatable health assessment suite. The official Security Management Administration Guide states that the HCP tool is designed for tests that assess the health of your system, WTS timelines that provide critical and informative events, and topology visualization. It also explains that HCP runs on managed Security Gateways every six hours and sends a status report to the Security Management Server or Domain Management Server.

Therefore, the "Tests" function of HCP is specifically system-health assessment. It is not primarily a SmartConsole connection checker, although management connectivity can affect visibility. It is also not a general "security posture" assessment engine in the sense of policy risk analysis, and it is not limited to SmartEvent status. In troubleshooting, HCP is useful because it gives administrators a structured view of platform health, recent critical events, and topology-related information, helping distinguish Threat Prevention blade problems from broader gateway, management, or system-health issues. Reference topics:

HealthCheck Point Tool, HCP Tests, system-health assessment, WTS, topology visualization, managed gateway status reporting.

NEW QUESTION # 57

Task: Configure inspection settings for mobile VPN users.

Answer:

Explanation:

See the Explanation.

- 1- Go to Threat Prevention > Inspection Settings.
- 2- Add a new exception group for mobile user IP pool.
- 3- Set reduced inspection sensitivity for this group.
- 4- Save, publish, and test VPN user traffic.
- 5- Ensure logs still show critical threats being detected.

NEW QUESTION # 58

.....

In the present market you are hard to buy the valid 156-590 study materials which are used to prepare the 156-590 exam like our 156-590 latest question. Both for the popularity in the domestic and the international market and for the quality itself, other kinds of study materials are incomparable with our 156-590 Test Guide and far inferior to them. Our 156-590 certification tool has their own fixed clients base in the domestic market and have an important share in the international market to attract more and more foreign clients.
