

100% Pass Quiz High-quality Oracle - 1z1-076 - Latest Braindumps Oracle Database 19c: Data Guard Administration Ppt

2026 Latest Actual4dump 1z1-076 PDF Dumps and 1z1-076 Exam Engine Free Share: <https://drive.google.com/open?id=1Vy3HmAx6eBfPeErtCZ9GfNRsZuUG9f3Q>

Contending for the success fruit of 1z1-076 exam questions, many customers have been figuring out the effective ways to pass it. And that is why we have more and more customers and everyday the hot hit and high pass rate as well. It is all due to the advantage of our useful 1z1-076 practice materials, and we have these versions of our 1z1-076 study materials for our customers to choose according to their different study habits: the PDF, the Software and the APP online.

Each Oracle certification exam candidate know this certification related to the major shift in their lives. Oracle Certification 1z1-076 Exam training materials Actual4dump provided with ultra-low price and high quality immersive questions and answers dedication to the majority of candidates. Our products have a cost-effective, and provide one year free update. Our certification training materials are all readily available. Our website is a leading supplier of the answers to dump. We have the latest and most accurate certification exam training materials what you need.

Released Oracle 1z1-076 Questions Tips For Better Preparation [2026]

Even in a globalized market, the learning material of similar 1z1-076 doesn't have much of a share, nor does it have a high reputation or popularity. In this dynamic and competitive market, the 1z1-076 study materials can be said to be leading and have absolute advantages. In order to facilitate the user real-time detection of the learning process, we 1z1-076 practice materials provided by the questions and answers are all in the past. It is closely associated, as our experts in constantly update products every day to ensure the accuracy of the problem, so all 1z1-076 practice materials are high accuracy.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.

Topic 2	<ul style="list-style-type: none"> • Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.
Topic 3	<ul style="list-style-type: none"> • Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 5	<ul style="list-style-type: none"> • Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 6	<ul style="list-style-type: none"> • Managing Oracle Net Services in a Data Guard Environment: The section focuses on Oracle Net Services and its role in Data Guard networking setup.
Topic 8	<ul style="list-style-type: none"> • Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 9	<ul style="list-style-type: none"> • Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.

Oracle Database 19c: Data Guard Administration Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which two are prerequisites for configuring Transaction Guard in a Data Guard environment?

- A. Set INSTANCE_NAME identically on all the Data Guard Configuration databases and modify the local service name on the client to include a CONNECTION_LIST containing all the standby hosts.
- B. Create a database service with COMMIT_OUTCOME set to TRUE, and ensure clients use that service to connect to the database instance.
- C. Create a database service with COMMIT_OUTCOME set to TRUE and ensure that the service is statically registered with the default listener on the primary host.
- D. Ensure that connection descriptors for database clients use the failover clause with the COMMIT_OUTCOME parameter set to TRUE.
- E. Grant execute permission on the DBMS_APP_CONT package to relevant database schema owners.

Answer: B,E

NEW QUESTION # 26

You have a Data Guard broker configuration consisting of:

A primary database

One local physical standby database

One far sync instance

A remote physical standby database

The broker configuration was created with the DGMGRL utility after creating all the databases and the far sync instance with command-line tools.

What is the correct way to add this configuration to Enterprise Manager Cloud Control assuming all the nodes have been discovered already as Enterprise Manager targets?

- A. Discover the primary as a target by refreshing the node on which it runs, and the other databases and instances in the Data Guard broker configuration will be discovered as targets automatically and be ready to be monitored.
- B. Discover the primary database as a target in Enterprise Manager Cloud Control. Then discover the existing Data Guard Broker configuration for the primary and all the other databases in the configuration will be discovered as targets and be ready to be monitored.
- C. Use the DGMGRL utility to register the configuration with the Enterprise Manager Cloud Control agent on the primary database node. This will enable the discovery of all the other databases in the configuration as targets which will be ready to be monitored.

- D. Discover either of the physical standby databases as a target by refreshing the node on which they run, and the other databases and instances in the Data Guard Broker configuration will be discovered as targets automatically and be ready to be monitored.
- E. Delete the Data Guard Broker configuration using DGMGRL and then re-create it using Enterprise Manager Cloud Control to enable all the databases in the configuration to be discovered as targets and to be ready to be monitored.

Answer: B

NEW QUESTION # 27

Which three statements are true about redo transport?

- A. With asynchronous redo transport, TTnn processes may read redo from the log buffer or from standby redo logs on the primary database.
- B. With synchronous redo transport, LGWR ships redo directly to RFS processes on the standby database instances and waits for an acknowledgment.
- C. Multiple RFS processes may receive redo on one standby database instance.
- D. Multiple RFS processes may receive redo on one far sync instance.
- E. An RFS process on a standby database instance may receive redo from an archiver process on the primary database instance to perform archive gap resolution.

Answer: B,C,E

NEW QUESTION # 28

Which three actions are performed by the START PLAN procedure of the DBMS ROLLING package?

- A. creating a guaranteed restore point on the primary database
- B. switching the primary database to the logical standby role
- C. building a LogMiner dictionary on the primary database instance
- D. starting media recovery on all the Leading Group Standby databases
- E. creating a guaranteed restore point on the standby databases
- F. converting the designated physical standby database into a logical standby database

Answer: A,C,E

Explanation:

The DBMS_ROLLING package facilitates a rolling upgrade process across a Data Guard configuration. The START PLAN procedure in particular handles several critical actions, including:

- * Creating a guaranteed restore point on the standby databases (B): This ensures that the standby databases can be reverted to their state before the rolling upgrade process in case of any issues.
- * Building a LogMiner dictionary on the primary database instance (C): This is necessary for logical standby databases to interpret redo data during the SQL Apply process.
- * Creating a guaranteed restore point on the primary database (D): Similar to the standby databases, this ensures that the primary database can be reverted to a known good state if necessary.
- * Oracle Database PL/SQL Packages and Types Reference
- * Oracle Data Guard Concepts and Administration Guide

NEW QUESTION # 29

Which three are prerequisites for using Data Guard Broker?

- A. The primary and standby databases must run the same version of the Oracle Database server.
- B. A statically defined listener end-point must be registered with the local listener on the servers hosting the standby database instances.
- C. DG_BROKED_START must be set to TRUE for a database instance before adding the database to the broker configuration.
- D. Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances.
- E. The broker configuration files for a RAC database must reside in shared storage accessible by all the RAC database instances.

instances.

- F. If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration.

Answer: A,D,F

Explanation:

Data Guard Broker is a management tool that simplifies the configuration, management, and monitoring of Data Guard environments. The prerequisites for using Data Guard Broker include:

The primary and standby databases must run the same version of the Oracle Database server (A): This ensures compatibility between the primary and standby databases and enables seamless role transitions and data synchronization.

Network connectivity to the primary database instance must be defined on the servers hosting the standby database instances (B): Proper network connectivity is essential for communication between the primary and standby databases, allowing for the replication of data and the synchronization of changes.

If any database in the configuration is a RAC database, then the broker configuration files must reside in shared storage accessible by all database instances for all databases in the broker configuration (D): In Real Application Clusters (RAC) environments, shared storage ensures that all instances of the RAC database can access the broker configuration files, facilitating the management of the Data Guard environment across all instances.
