최신 HCSP Presales H19-401_V2.0 무료샘플문제 (Q24-Q29):

질문 # 24

Which of the following scenarios can Huawei's cloud-managed campus network solution apply to?

- A. Primary/Secondary school
- B. Micro store
- C. Shopping mall/Supermarket
- D. Hotel

정답: A,B,C,D

설명:

Huawei's CloudCampus Solution is designed for high scalability and multi-branch management. It is specifically recommended in the V2.0 design guides for:

- * Retail (A, D): Centralized management of many small, geographically dispersed stores.
- * Education (B): Simplified O & M for K-12 schools with limited IT staff.
- * Hospitality (C): Fast deployment and easy guest Wi-Fi management for hotels.

질문 # 25

Which of the following deployment modes are supported by APs?

- A. Email-based deployment
- B. Registration query center-based deployment
- C. Barcode scanning-based deployment with CloudCampus APP
- D. DHCP Option 148-based deployment

정답: B,C,D

설명:

In the Xinghe Intelligent Campus solution, APs (Access Points) support several automated "Plug-and-Play" deployment methods. Option A (Registration Query Center) allows an AP to query a Huawei-hosted global database to find its assigned controller. Option C (Barcode Scanning) uses the mobile app to scan the SN (Serial Number), binding the device to a site. Option D (DHCP Option 148) allows a local DHCP server to deliver the management IP of iMaster NCE-Campus directly to the AP. Email-based deployment (B) is reserved specifically for AR routers/CPEs in SD-WAN scenarios and is not a supported method for AP onboarding.

질문 # 26

Hybrid cables do not support PoE++ power supply.

- A. True
- B. False

정답: B

설명:

This statement is False . Huawei's Hybrid Optical-Electrical Cables (Photoelectric cables) are specifically designed to overcome the 100-meter distance limitation of traditional Ethernet. They combine optical fibers for high-speed data (10G/25G/100G) and copper wires for power. These cables are a core part of the "Simplified Architecture" and do support PoE++ (up to 90W), allowing high-power Wi-Fi 7 APs to be powered over distances of up to 300-500 meters from a central switch.

질문 # 27

Which of the following are the advantages of SDN?

- A. Network virtualization
- B. Rapid service provisioning
- C. Open programmability
- D. Network automation

정답: A,B,C,D

질문 # 28

What is the single-link failover time supported by Huawei's M-LAG solution?

- A. < 50 ms
- B. < 400 ms
- C. < 1s
- D. < 2s

정답: A

설명:

M-LAG (Multichassis Link Aggregation Group) is a key reliability technology in the Huawei Xinghe Intelligent Campus architecture. It provides device-level redundancy by virtualizing two switches into a single logical entity. One of the primary performance requirements for M-LAG in high-availability designs is ensuring millisecond-level failover. In the event of a single link failure (e.g., an uplink from an access switch to one of the M-LAG core switches), the traffic is rerouted through the peer-link or the remaining active member of the Eth-Trunk in less than 50 ms , ensuring "hitless" service for sensitive applications like voice or industrial control.
