

1z1-076 exam dumps, Oracle 1z1-076 network simulator review

2026 Latest PassTesting 1z1-076 PDF Dumps and 1z1-076 Exam Engine Free Share: https://drive.google.com/open?id=15HSwj04zltreNNYyiVx1iAHBnzU_6Ecm

Our company pays great attention to improve our 1z1-076 exam materials. Our aim is to develop all types study material about the official exam. Then you will relieve from heavy study load and pressure. Also, our researchers are researching new technology about the 1z1-076 Learning Materials. You will find that every detail of our 1z1-076 study braindumps is perfect and excellent not only on the content but also on the displays. And every button on our website is easy, fast and convenient to use.

Oracle 1z1-076 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Monitoring a Data Guard Broker Configuration: The topic covers the use of Enterprise Manager and DGMMGR to monitor Data Guard configurations and explains the various data protection modes available.
Topic 3	<ul style="list-style-type: none">Oracle Data Guard Broker Basics: An overview of the Data Guard broker, its architecture, components, benefits, and configurations, is provided here. It serves as an introduction to the tool used for managing Data Guard configurations.
Topic 4	<ul style="list-style-type: none">Backup and Recovery Considerations in an Oracle Data Guard Configuration: In this topic, Backup and recovery procedures in a Data Guard configuration are discussed, including RMAN backups, offloading to physical standby, and network-based recovery.
Topic 5	<ul style="list-style-type: none">Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby Databases: Here, the usage of physical standby databases for real-time queries is discussed.
Topic 6	<ul style="list-style-type: none">Oracle Data Guard Basics: This topic covers the essential architecture and concepts of Oracle Data Guard. It includes sub-topics such as the physical and logical standby database comparison, benefits of Data Guard, and its integration with multi-tenant databases.

Topic 7	<ul style="list-style-type: none"> • Creating a Data Guard Broker Configuration: This section delves into the practical aspects of creating and managing a Data Guard broker configuration, including command-line and Enterprise Manager approaches.
Topic 8	<ul style="list-style-type: none"> • Using Flashback Database in a Data Guard Configuration: This topic covers the configuration and advantages of using Flashback Database in a Data Guard setup, as well as the process of enabling fast-start failover for seamless role changes.
Topic 9	<ul style="list-style-type: none"> • Patching and Upgrading Databases in a Data Guard Configuration: This section provides guidance on patching and upgrading databases in a Data Guard environment, along with performance optimization techniques and monitoring considerations.
Topic 10	<ul style="list-style-type: none"> • Managing Physical Standby Files After Structural Changes on the Primary Database: The topic covers managing structural changes in the primary database and their impact on physical standby files.
Topic 11	<ul style="list-style-type: none"> • Creating a Logical Standby Database: This topic guides users through the process of creating and managing a logical standby database, including SQL Apply filtering.
Topic 12	<ul style="list-style-type: none"> • Performing Role Transitions: Here, the concept of database roles is explained, along with the steps for performing switchovers, failovers, and maintaining physical standby sessions during role transitions.

1z1-076 Training Materials, 1z1-076 Test Result

Do you have registered for the Oracle 1z1-076 exam and are worried about Oracle 1z1-076 exam preparation? Try Oracle 1z1-076 PDF Questions and practice tests which help you prepare the whole course in less duration. The Oracle 1z1-076 practice test material gives you a clear idea to prepare for the Oracle 1z1-076 Exam and saves you preparation time. An 1z1-076 exam is a time-based exam, and the candidate must be fast enough to solve the problems in a limited time.

Oracle Database 19c: Data Guard Administration Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which THREE statements are true about snapshot standby databases?

- A. Snapshot standby databases may be used for rolling database upgrades.
- B. If datafiles grow while a database is a snapshot standby database, then they shrink when converted back to a physical standby database.
- C. A snapshot standby database must be opened at least once in read-write mode before it can be converted into a physical standby database.
- D. A snapshot standby database can be the only standby database in a Maximum Protection Oracle Data Guard configuration.
- E. A guaranteed restore point is created automatically when a physical standby database is converted into a snapshot standby database.

Answer: A,C,E

NEW QUESTION # 70

Your Data Guard environment has a remote physical standby database with real-time query enabled, which is used for reporting, and a logical standby database used for DSS reporting.

Switchovers or failovers are possible due to testing or in case of a disaster.

Clients use local TNSNAMES.ORA files to define connection strings to the database instances.

Which three will prevent clients from connecting to the wrong database instances?

- A. Oracle Net connectivity to the primary database instance must be established on all the standby database instances.
- B. A service name is registered with the local listener of each database instance.
- C. The standby database services must be defined statically with the Listeners running on the standby database hosts.
- D. The LOCAL_LISTENER parameter on the primary database instance must always be set.
- E. The DB_NAME and DB_UNIQUE_NAME parameters must be set to the same value for all the databases in the Data Guard environment.
- F. The client applications must use the correct TNS entries when requesting connections to the database instances.
- G. Client TNS entries for the databases use the correct service names for the intended service.

Answer: C,F,G

Explanation:

Based on Oracle Database 19c: Data Guard Administration documents, the three measures that can prevent clients from connecting to the wrong database instances during switchovers, failovers, or regular operations in a Data Guard environment are:

B. The standby database services must be defined statically with the Listeners running on the standby database hosts.

D. The client applications must use the correct TNS entries when requesting connections to the database instances.

E. Client TNS entries for the databases use the correct service names for the intended service.

In an Oracle Data Guard configuration, correctly configuring Oracle Net Services (including TNS entries and listeners) is crucial for ensuring that clients connect to the appropriate database instance, whether it's the primary or standby. Defining services on the standby database and associating them with listeners ensures that client applications can connect to the standby when needed, especially useful in a role transition or when the standby is open for read-only access or real-time query. It's essential that TNS entries used by client applications specify the correct service names that correspond to the intended database roles, such as primary or standby. This setup facilitates seamless connectivity to the appropriate instance based on the role, especially critical during switchovers and failovers when the roles of the databases change.

Reference:

Oracle's Data Guard concepts and administration guide provides extensive information on configuring network services for Data Guard environments, ensuring that applications connect to the correct database instance based on the current role of the databases in the Data Guard configuration.

NEW QUESTION # 71

Which three types of backups offload with the primary database in a data Guard

- A. Control files
- B. Online logs
- C. Broker configuration files
- D. Password files
- E. Archive logs
- F. Data files

Answer: A,E,F

Explanation:

In a Data Guard environment, you can offload the backups of certain database components to a physical standby database.

Incremental backups of a standby database are interchangeable with the primary database, meaning you can apply a backup taken on a standby database to a primary database and vice versa. This includes control files, data files, and archive logs. Backups of control files and nonstandby control files are interchangeable. You can restore a standby control file on a primary database and a primary control file on a physical standby database, demonstrating their interchangeability and the ability to offload control file backups to one database in a Data Guard environment.

NEW QUESTION # 72

Examine this validate command:

```
DGMGRL> VALIDATE DATABASE VERBOSE "<database name>";
```

Which THREE statements are TRUE?

- A. The command performs network connectivity checks between members of a broker configuration.
- B. The command can be used for a logical standby database.
- C. The command performs a comparison of SPFILE entries between the primary database and a specified standby database.
- D. The command uses information available in various Oracle Data Guard views as well as the Automatic Diagnostic Repository.

- E. The command performs a comprehensive set of database checks prior to a role change.

Answer: A,B,E

Explanation:

* The command performs a comprehensive set of database checks prior to a role change (A): The VALIDATE DATABASE command in Data Guard Manager (DGMGRL) is designed to perform an exhaustive check of a specified database's readiness for a role change, such as a switchover or failover.

* The command performs network connectivity checks between members of a broker configuration (C): One of the checks includes verifying that the necessary network connectivity exists between the databases in a Data Guard Broker configuration.

* The command can be used for a logical standby database (D): The VALIDATE DATABASE command is versatile and can be used for both physical and logical standby databases to ensure their readiness for role changes.

NEW QUESTION # 73

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It protects against logical corruptions being replicated to standby databases.
- B. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.
- C. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- D. It protects against user errors being replicated to standby databases.
- E. It protects against recoverable errors during a planned or an unplanned outage of a primary database.

Answer: B,E

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.
