## GH-200 Simulated Test & GH-200 VCE Exam Simulator

To get prepared for the GitHub Actions certification exam, applicants face a lot of trouble if the study material is not updated. They are using outdated materials resulting in failure and loss of money and time. So to solve all these problems, Braindumpsqa offers actual GH-200 Questions to help candidates overcome all the obstacles and difficulties they face during GH-200 examination preparation.

## Microsoft GH-200 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> <li>• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.</li> </ul>

## Microsoft GitHub Actions Sample Questions (Q13-Q18):

### NEW QUESTION # 13

As a developer, you are using a Docker container action in your workflow. What is required for the action to run successfully?

- A. The job runs-on must specify a Linux machine with Docker installed.
- B. The action must be published to the GitHub Marketplace.
- C. The job env must be set to a Linux environment.
- D. The referenced action must be hosted on Docker Hub.

**Answer: A**

Explanation:

For a Docker container action to run in a GitHub Actions workflow, the runner must have Docker installed. The runs-on attribute of the job should specify an environment that supports Docker, typically a Linux environment (e.g., ubuntu-latest), since Docker is widely supported and commonly used in Linux-based environments.

### NEW QUESTION # 14

As a DevOps engineer, you are developing workflows to build an application. You have a requirement to create the build targeting multiple node versions. Which code block should you use to define the workflow?

- A. 

```
jobs:
  build-app:
    strategy:
      matrix:
        node-ver: [10, 12, 14]
    steps:
      - uses: actions/setup-node@v3
        with:
          node-version: ${{ matrix.node-ver }}
```

- B. 

```
jobs:
  build-app:
    matrix:
      strategy:
        node-ver: [10, 12, 14]
    steps:
      - uses: actions/setup-node@v3
        with:
          node-version: ${{ matrix.node-ver }}
```

- C. 

```
jobs:
  build-app:
    strategy:
      matrix:
        node-ver: [10, 12, 14]
    steps:
      - uses: actions/setup-node@v3
        with:
          node-version: ${{ strategy.node-ver }}
```

- D. 

```
jobs:
  build-app:
    matrix-strategy:
      node-ver: [10, 12, 14]
    steps:
      - uses: actions/setup-node@v3
        with:
          node-version: ${{ matrix.strategy.node-ver }}
```

**Answer: A**

Explanation:

Use keywords strategy and matrix in that order.

Last line should be node-version: \${{ matrix.node-ver }}

**NEW QUESTION # 15**

Which of the following statements are true regarding the use of GitHub Actions on a GitHub Enterprise Server instance? (Each

correct answer presents a complete solution. Choose three.)

- A. Actions must be defined in the .github repository.
- B. Actions created by GitHub are automatically available and cannot be disabled.
- C. Third-party actions can be manually synchronized for use on GitHub Enterprise Server.
- D. Most GitHub-authored actions are automatically bundled for use on GitHub Enterprise Server.
- E. Third-party actions can be used on GitHub Enterprise Server by configuring GitHub Connect.
- F. Use of GitHub Actions on GitHub Enterprise Server requires a persistent internet connection.

**Answer: C,D,E**

Explanation:

[B] If you want your GitHub Enterprise Server instance to use third-party custom actions, you need to enable GitHub Connect.

[C] Most official GitHub-authored actions are automatically bundled with GitHub Enterprise Server, and are captured at a point in time from GitHub Marketplace.

[F] Third-party actions can be manually synchronized to GitHub Enterprise Server (GHES) to be used in workflows without requiring an internet connection to GitHub.com. This is done using the actions-sync tool to download actions from GitHub.com and transfer them to the GHES instance.

This manual method provides an alternative to using GitHub Connect, offering stricter control over which actions are available on the GHES instance.

#### NEW QUESTION # 16

Scheduled workflows run on the:

- A. latest commit from the branch named main,
- B. latest commit on the default or base branch
- C. latest commit and branch on which the workflow was triggered,
- D. specified commit and branch from the workflow YAML file,
- E. latest commit from the branch named schedule,

**Answer: C**

Explanation:

Scheduled workflows in GitHub Actions are triggered at specified times, and they run on the latest commit of the branch that triggers the workflow. This means the workflow will run on the most recent commit on the branch that was active at the time the scheduled event occurs.

#### NEW QUESTION # 17

You are a developer working on developing reusable workflows for your organization. What keyword should be included as part of the reusable workflow event triggers?

- A. workflow\_call
- B. pull\_request
- C. check\_run
- D. workflow\_run

**Answer: A**

Explanation:

The workflow\_call event is used to trigger a reusable workflow from another workflow. This allows you to create workflows that can be reused in multiple places within your organization, enabling better modularity and reducing duplication.

#### NEW QUESTION # 18

.....

All these three GitHub Actions (GH-200) exam questions formats offered by the Braindumpsqa are easy to use and perfectly work with all the latest web browsers, operating systems, and devices. The Braindumpsqa GH-200 web-based practice test software and desktop practice test software both are the mock Microsoft GH-200 Exam that will give you real-time GitHub Actions (GH-200) exam environment for quick preparation.
