Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which Azure component plays a critical role in managing and routing communication between different Azure services?

Response:

- **A. Azure Service Bus**
- B. Azure Logic Apps
- C. Azure Functions
- D. Azure Event Grid

Answer: A

NEW QUESTION # 56

Which statement about deploying VMs in a gateway subnet is true?

- **A. VMs are not allowed in a gateway subnet**
- B. VMs can be deployed in a gateway subnet only after you deploy the VPN Gateway
- C. VMs are required in a gateway subnet
- D. VMs are automatically deployed in a gateway subnet

Answer: A

Explanation:

Azure does not allow the deployment of virtual machines (VMs) in a gateway subnet. The gateway subnet is specifically reserved for Azure VPN Gateway or ExpressRoute Gateway instances, and deploying other resources in it can cause gateway deployment or operation failures.

NEW QUESTION # 57

What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- A. You must use unicast FGCP to synchronize the configurations.
- **B. You must assign the public IP address to an Azure load balancer.**
- C. You must configure both load balancers to allow administrative access.
- D. You must configure all FortiGate VMs with three or more interfaces.

Answer: B

Explanation:

In an active-active FortiGate cluster deployment in Azure, you must assign the public IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. The Azure Load Balancer handles inbound traffic and distributes it to the active FortiGate instances.

Response:

- A. Azure Microsoft Entra ID
- B. Azure Cosmos DB
