You can also free download the demos of our CIPT learning materials to have a check.

## IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q36-Q41):

### NEW QUESTION # 36

What is the primary objective of conducting a privacy audit?

- A. To assess robustness of encryption technologies.

- B. To ensure compliance with data protection regulations and internal privacy policies.
- C. To identify privacy risks related to third-party processors.
- D. To evaluate how personal data is collected, used, and shared.

**Answer: B**

Explanation:

A privacy audit's main purpose is to ensure:

# Compliance with privacy laws, regulations, standards, and internal organizational policies.

CIPT identifies privacy audits as tools to verify:

- \* Whether privacy controls operate as intended
- \* Whether data practices align with policies and regulatory requirements
- \* Gaps in compliance
- \* Adequacy of privacy governance processes
- \* Organizational accountability

This is consistent with:

- \* ISO/IEC 27701 privacy management audits
- \* GDPR accountability requirements
- \* SOC 2 Privacy Principle assessments
- \* NIST Privacy Framework assessments

Why others are not the primary objective:

- \* A: Encryption is reviewed, but privacy audits cover far more.
- \* C: Third-party risk is one part of an audit, not the main objective.
- \* D: Evaluation of data practices is part of compliance checking, but B is the overarching purpose.

**NEW QUESTION # 37**

What can be used to determine the type of data in storage without exposing its contents?

- A. Data mapping.
- B. Server logs.
- C. Collection records.
- D. Metadata.

**Answer: B**

**NEW QUESTION # 38**

SCENARIO - Please use the following to answer the next question:

You have just been hired by Ancillary.com, a seller of accessories for everything under the sun, including waterproof stickers for pool floats and decorative bands and cases for sunglasses. The company sells cell phone cases, e-cigarette cases, wine spouts, hanging air fresheners for homes and automobiles, book ends, kitchen implements, visors and shields for computer screens, passport holders, gardening tools and lawn ornaments, and catalogs full of health and beauty products. The list seems endless. As the CEO likes to say, Ancillary offers, without doubt, the widest assortment of low-price consumer products from a single company anywhere.

Ancillary's operations are similarly diverse. The company originated with a team of sales consultants selling home and beauty products at small parties in the homes of customers, and this base business is still thriving.

However, the company now sells online through retail sites designated for industries and demographics, sites such as "My Cool Ride11 for automobile-related products or "Zoomer" for gear aimed toward young adults.

The company organization includes a plethora of divisions, units and outrigger operations, as Ancillary has been built along a decentered model rewarding individual initiative and flexibility, while also acquiring key assets. The retail sites seem to all function differently, and you wonder about their compliance with regulations and industry standards. Providing tech support to these sites is also a challenge, partly due to a variety of logins and authentication protocols.

You have been asked to lead three important new projects at Ancillary:

The first is the personal data management and security component of a multi-faceted initiative to unify the company's culture. For this project, you are considering using a series of third-party servers to provide company data and approved applications to employees.

The second project involves providing point of sales technology for the home sales force, allowing them to move beyond paper checks and manual credit card imprinting.

Finally, you are charged with developing privacy protections for a single web store housing all the company's product lines as well as products from affiliates. This new omnibus site will be known, aptly, as "Under the Sun." The Director of Marketing wants the site

not only to sell Ancillary's products, but to link to additional products from other retailers through paid advertisements. You need to brief the executive team of security concerns posed by this approach.

What technology is under consideration in the first project in this scenario?

- A. Data on demand.
- B. Server driven controls.
- C. **MAC filtering**
- D. Cloud computing.

**Answer: C**

#### **NEW QUESTION # 39**

Which is NOT a suitable action to apply to data when the retention period ends?

- A. De-identification.
- B. **Deletion**.
- C. Retagging.
- D. Aggregation.

**Answer: B**

#### **NEW QUESTION # 40**

Which of the following is NOT a workplace surveillance best practice?

- A. Ensure the minimal amount of surveillance is performed to meet the objective.
- B. **Ensure surveillance is discreet so employees do not alter their behavior.**
- C. Check local privacy laws before putting surveillance in place.
- D. Once surveillance data has been gathered, limit exposure of the content.

**Answer: B**

Explanation:

Workplace surveillance best practices are designed to balance the need for security and productivity with respect for employees' privacy. Here's why option B is not considered a best practice:

\* Transparency and Consent: Best practices emphasize transparency. Employees should be aware of the surveillance and the reasons behind it. Discreet surveillance can create a distrustful work environment and potentially violate privacy laws.

\* Legal Compliance: Checking local privacy laws (A) ensures that surveillance practices are compliant with legal standards, which vary by region.

\* Data Minimization: Limiting exposure of the content (C) and ensuring minimal surveillance (D) align with data minimization principles, reducing the risk of misuse or over-collection of personal data.

\* Ethical Considerations: Ethical surveillance practices involve informing employees, obtaining consent, and using surveillance data responsibly.

Reference: IAPP Information Privacy Technologist documentation highlights the importance of transparency, legal compliance, and ethical considerations in workplace surveillance practices.

#### **NEW QUESTION # 41**

.....

A certificate may be a threshold for many corporations, it can decide that if you can enter a good company. There are CIPT test dumps in our company with high quality, if you choose us pass guarantee and money back guarantee, if you indeed fail the exam, your money will be returned to your account. You can take easy to use the CIPT Test Dumps, since we have the first-hand information, we will ensure that you will get the latest information.
