AZ-900 Exam consists of multiple-choice questions and is designed to be completed in 60 minutes. Candidates need to score at least 700 out of 1000 to pass the exam.

Microsoft Azure Fundamentals Sample Questions (Q182-Q187):

NEW QUESTION # 182

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area	 Statements	Yes	No
	You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.	<input type="radio"/>	<input type="radio"/>
	You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.	<input type="radio"/>	<input type="radio"/>
	You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area	 Statements	Yes	No
	You can use Availability Zones in Azure to protect Azure virtual machines from a datacenter failure.	<input checked="" type="checkbox"/>	<input type="radio"/>
	You can use Availability Zones in Azure to protect Azure virtual machines from a region failure.	<input type="radio"/>	<input checked="" type="checkbox"/>
	You can use Availability Zones in Azure to protect Azure managed disks from a datacenter failure.	<input checked="" type="checkbox"/>	<input type="radio"/>

NEW QUESTION # 183

You have a resource group named RG1.

You plan to create virtual networks and app services in RG1.

You need to prevent the creation of virtual machines only in RG1.

What should you use?

- A. an Azure role
- **B. an Azure policy**
- C. a tag
- D. a lock

Answer: B

Explanation:

Section: Understand Security, Privacy, Compliance and Trust

Explanation:

Azure policies can be used to define requirements for resource properties during deployment and for already existing resources. Azure Policy controls properties such as the types or locations of resources.

Azure Policy is a service in Azure that you use to create, assign, and manage policies. These policies enforce different rules and effects over your resources, so those resources stay compliant with your corporate standards and service level agreements.

In this question, we would create a Azure policy assigned to the resource group that denies the creation of virtual machines in the resource group.

You could place a read-only lock on the resource group. However, that would prevent the creation of any resources in the resource group, not virtual machines only. Therefore, an Azure Policy is a better solution.

NEW QUESTION # 185

You have an Azure environment that contains 10 virtual networks and 100 virtual machines.

You need to limit the amount of inbound traffic to all the Azure virtual networks.

What should you create?

- A. 10 virtual network gateways
- B. one Azure firewall
- C. 10 Azure ExpressRoute circuits
- D. one application security group (ASG)

Answer: B

Explanation:

Section: Describe general security and network security features

Explanation:

You can restrict traffic to multiple virtual networks with a single Azure firewall.

Azure Firewall is a managed, cloud-based network security service that protects your Azure Virtual Network resources. It's a fully stateful firewall as a service with built-in high availability and unrestricted cloud scalability.

You can centrally create, enforce, and log application and network connectivity policies across subscriptions and virtual networks. Azure Firewall uses a static public IP address for your virtual network resources allowing outside firewalls to identify traffic originating from your virtual network.
