The third format is desktop VMware 2V0-11.25 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for VMware Cloud Foundation 5.2 Administrator (2V0-11.25) the on first try.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55

Match each vSphere HA host state issue with its troubleshooting step.

Issues	Troubleshooting Steps
Host in Isolation Response	Verify network connectivity and HA isolation response settings
Host in Failover State	Ensure host is powered on and network is properly configured
Host in Unreachable State	Wait for HA to complete its initialization or check logs for errors
Host in Initialization State	Check for sufficient resources on remaining hosts

Answer:

Explanation:

Issues	Troubleshooting Steps
Host in Isolation Response	Verify network connectivity and HA isolation response settings
Host in Failover State	Ensure host is powered on and network is properly configured
Host in Unreachable State	Wait for HA to complete its initialization or check logs for errors
Host in Initialization State	Check for sufficient resources on remaining hosts

NEW QUESTION # 56

Which two operations can be completed in the SDDC Manager UI on an NSX Edge cluster after it has been deployed into a workload domain? (Choose two.)

- A. Delete
- B. Sync
- C. Expand
- D. Redeploy
- E. Shrink

Answer: C,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

After an NSX Edge cluster is deployed into a workload domain, SDDC Manager provides built in operations to adjust the cluster size. According to the VMware Cloud Foundation 5.2 documentation:

"After you create an NSX Edge cluster, you can use SDDC Manager to expand or shrink it by adding or deleting NSX Edge nodes." Breakdown of options:

B).Expand - You can add one or more Edge nodes to increase the cluster size.

E).Shrink - You can remove Edge nodes to decrease the cluster size.

These two actions are the only supported cluster scaling operations available in SDDC Manager post-deployment. Other

operations-such as Redeploy, Sync, or Delete-are not available via the UI for a deployed Edge cluster and are either manual or unsupported in that context.

Summary:

Selected choices B and E match the documented capability to scale an NSX Edge cluster via SDDC Manager.

No other operations (A, C, D) are supported for an existing Edge cluster through the UI.

NEW QUESTION # 57

An administrator needs to deploy a Kubernetes cluster on a vSphere IaaS control plane (formerly vSphere with Tanzu) to host a new application.

Which three steps should be followed to successfully deploy the Kubernetes cluster? (Choose three.)

- A. , Deploy a vSphere Pod Service.
- **B. Configure a Load Balancer for the Kubernetes control plane nodes.**
- C. Create a new VM template for the Kubernetes nodes.
- **D. Enable Workload Management on the vSphere Cluster.**
- **E. Configure a vSphere Namespace and assign resource quotas.**

Answer: B,D,E

Explanation:

A Load Balancer is needed for the Kubernetes control plane nodes to distribute traffic across the control plane and ensure high availability for the Kubernetes management layer.

A vSphere Namespace must be configured to define a logical boundary for Kubernetes workloads, and resource quotas help ensure that resources are allocated appropriately for the workloads.

Enabling Workload Management on the vSphere Cluster is necessary to integrate Kubernetes with vSphere and manage the lifecycle of Kubernetes clusters using vSphere with Tanzu.

NEW QUESTION # 58

What is the primary benefit of using HCX Replication Assisted vMotion (RAV) for VM migration?

- A. It requires no configuration changes to the VM(s) within the destination environment.
- **B. It ensures zero downtime to the VM(s).**
- C. It provides the fastest migration method by powering off the VM(s) before initiating the migration.
- D. It performs a test migration to ensure compatibility.

Answer: B

Explanation:

According to the VMware HCX User Guide and the VMware Cloud Foundation 5.2 Documentation, HCX Replication Assisted vMotion (RAV) is designed to provide a seamless migration of VMs across environments with no downtime to the workload.

Exact Extract from the VMware HCX User Guide:

"HCX Replication Assisted vMotion (RAV) provides zero-downtime migration for virtual machines, combining the benefits of vMotion with replication technologies. This allows VMs to continue running without disruption during the migration process, ensuring uninterrupted service for business-critical workloads." (VMware HCX User Guide - VM Mobility Methods) Why Not the Other Options?

A: RAV does not eliminate all configuration changes; network and other settings may still need updates depending on environments.

B: RAV does not perform a test migration; test migration is a feature of other migration methods.

D: RAV is not a cold migration method; it avoids powering off the VMs and maintains their availability throughout.

Summary:

The primary benefit of using HCX Replication Assisted vMotion (RAV) for VM migration is that it ensures zero downtime to the VM(s) (C), as stated in the official VMware documentation.

NEW QUESTION # 59

DRAG DROP

Put the following steps in the correct order to update the driver/firmware in vSAN.

<input type="checkbox"/> Verify that the new driver and firmware versions are active and the host is functioning correctly.	<input type="checkbox"/> Step 1
<input type="checkbox"/> Download the latest driver and firmware from the hardware vendor's website.	<input type="checkbox"/> Step 2
<input type="checkbox"/> Apply the firmware update to the host using the vendor's update tool.	<input type="checkbox"/> Step 3
<input type="checkbox"/> Plan for a maintenance window to perform the update.	<input type="checkbox"/> Step 4
