Best of luck in Appian ACD201 exam and career!!!

Appian Senior Developer Sample Questions (Q17-Q22):

NEW QUESTION # 17

You're developing a user input form for a financial services application.

One component of this form requires you to embed an external site (in the form of a URL) that can receive inputs from Appian and return updates as the user interacts with it.

What should you do?

- A. Use an integration to achieve interaction with the embedded site while displaying information in the Appian out-of-the-box Web Content Component. That way you can refresh for updates and interact with the site.
- B. Use the Appian out-of-the-box Web Content Component. It can display content from a URL and provide both additional inputs, or receive updates as the user interacts with the embedded site.
- C. Use a component plug-in to achieve interaction with the embedded site, because this use case requires input-output or event parameters.

Answer: C

Explanation:

A component plug-in is required because the standard Web Content Component in Appian only displays external sites and does not support direct two-way interaction or input/output event handling. A plug-in enables custom integration to allow input and receive updates as users interact with the embedded site.

NEW QUESTION # 18

You need to configure the security for the synced record type Case.

Your requirements are:

Only users in the "Archive Management" group can access cases in the "Archived" status.

Cases in the status "Deleted" are accessible to no one.

Users in the "All Users" group can already access the record.

What should you do?

- A. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure a source filter to exclude all cases that are in the "Deleted" status.
- B. Create a new user filter to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure the record-level security to exclude all cases that are in the "Deleted" status.
- C. Create a new record-level security rule to allow access if the user is in the "Archive Management" group while the case status is "Archived." Configure a source filter to exclude all cases that are in the "Deleted" status.

Answer: C

Explanation:

Creating a record-level security rule for "Archived" cases restricts access based on user group, and a source filter ensures "Deleted" cases are excluded from being accessed by any user. This approach meets both security requirements efficiently.

NEW QUESTION # 19

In reviewing the process model metrics of your application, you notice a process model with a completion rate of only 10%.

What are two possible reasons for this low completion rate? (Choose two.)

- A. The days configured for archival or deletion is significantly higher than the other process models in your application.
- B. There are a high number of smart service nodes configured in the process model.
- C. The process contains at least one User Input Task with no exceptions or escalations, and users do not complete the task.
- D. There are a significant number of instances that are experiencing process errors, which are not being handled by the production support team.

Answer: C,D

Explanation:

Process errors that remain unhandled will stall instances; those instances never reach an end event, driving the completion rate down. User-input tasks without deadlines, exceptions, or escalations can sit indefinitely when users do not act, leaving instances in an active state and lowering the overall completion percentage.

NEW QUESTION # 20

You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.

Which design pattern is most appropriate in this case?

- A. Use `a!queryRecordType()` with `a!aggregationFields()` to group the case creation date by region into a local variable. Pass the local variable value into the data input of `a!columnChartField()`
- B. Configure `a!columnChartField()` using `a!columnChartConfig()` with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- C. Configure `a!pieChartField()` using `a!pieChartConfig()` with the case creation date as the primaryGrouping and the region as the secondaryGrouping.

Answer: A

Explanation:

Using `a!queryRecordType()` with `a!aggregationFields()` to group by case creation date and region, storing the result in a local variable and passing it to the data input of `a!columnChartField()` ensures efficient aggregation and flexible chart display for your report.

NEW QUESTION # 21

You're creating an interface object that displays a report of open cases. This interface will be used as the content of a site page. Users in the "ACME Employees" group must be able to view the report.

Which two steps should you perform? (Choose two.)

- A. Add the "ACME Employees" group as a viewer on the folder containing the interface object.
- B. Include the "ACME Employees" group as a member of the "Report Viewers" system group.
- C. Ensure that the site page visibility permits the "ACME Employees" group to view the page.
- D. Add the "ACME Employees" group as a viewer on the site object.

Answer: A,C

Explanation:

The site page visibility must permit the "ACME Employees" group to ensure they can access the site page with the report.

The "ACME Employees" group must be added as a viewer on the folder containing the interface object to grant them access to the report interface.

NEW QUESTION # 22

.....

What are you waiting for? Opportunity knocks but once. You can get Appian ACD201 complete as long as you enter Pass4sures website. You find the best ACD201 Exam Training materials, with our exam questions and answers, you will pass the exam.
