- C. Customer-centric

- D. Systems

Lean thinking is the type of thinking that allows the customer to pull value from the producer. Lean thinking is a philosophy and a set of principles and practices that aim to eliminate waste and optimize value delivery.

Pull is a concept that means that nothing is built or delivered until there is a demand for it from the customer or the next process. Pull helps reduce overproduction, inventory, and waiting, and ensures that only valuable work is done. References: Thriving in the Digital Age, SAFe Principle #1

#### NEW QUESTION # 80

What triggers the need for a Value Stream?

- A. Spike request
- B. Feature request
- C. Epic request
- D. User Story request

**Answer: B**

Explanation:

Explanation

According to the SAFe Agilist 6.0 domain of Lean Thinking, a value stream is triggered by a demand for some value, such as a new

feature, a change request, or a defect fix<sup>1</sup>. A feature is a service that fulfills a stakeholder need<sup>2</sup>. Therefore, a feature request is a valid trigger for a value stream.

A spike request is a type of exploration enabler that addresses technical uncertainty or risk<sup>3</sup>. A user story request is a type of backlog item that represents an end user goal or function<sup>4</sup>. These are not triggers for a value stream, but rather work items that flow through a value stream.
