P.S. Free & New C\_CPI\_2506 dumps are available on Google Drive shared by Prep4King: [https://drive.google.com/open?id=19MLMl\\_gU\\_U6ixdItS5VhDGtFQmai6a1L](https://drive.google.com/open?id=19MLMl_gU_U6ixdItS5VhDGtFQmai6a1L)

According to the needs of all people, the experts and professors in our company designed three different versions of the C\_CPI\_2506 certification training materials for all customers. The three versions are very flexible for all customers to operate. According to your actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the C\_CPI\_2506 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the C\_CPI\_2506 latest questions to preparing for your coming exam.

## SAP C\_CPI\_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>SAP Integration Suite Overview:</b> This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Managing APIs:</b> This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Implementing Cloud Integration:</b> This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li> </ul>

## **High Pass-Rate C\_CPI\_2506 - Reliable SAP Certified Associate - Integration Developer Test Dumps**

The C\_CPI\_2506 mock tests are specially built for you to evaluate what you have studied. These SAP Certified Associate - Integration Developer (C\_CPI\_2506) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our C\_CPI\_2506 Practice Tests teach you time management so you can pass the SAP Certified Associate - Integration Developer (C\_CPI\_2506) certification exam.

### **SAP Certified Associate - Integration Developer Sample Questions (Q38-Q43):**

#### **NEW QUESTION # 38**

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- **A. A local installation is not required.**
- **B. Predefined scenarios can be used out-of-the-box.**
- C. Customer-to-Customer(C2C) integrations can be developed
- D. Integration processes can be developed offline.

**Answer: A,B**

Explanation:

Some advantages of the cloud integration capability within SAP Integration Suite are:

A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.

Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

#### **NEW QUESTION # 39**

You want to set up an SAP backend system through the Cloud Connector with an API provider. Which connection type do you use?

- A. Cloud Integration

- B. Open Connectors
- C. Internet
- **D. On-premise**

**Answer: D**

Explanation:

To connect an SAP backend system through the Cloud Connector with an API provider, you must use the on-premise connection type. The Cloud Connector acts as a link between SAP Integration Suite and on-premise systems, enabling secure and controlled access to the backend resources. The on-premise connection type allows you to specify the internal host and port of the backend system, as well as the virtual host and port that will be exposed to SAP Integration Suite. You can also define access control rules and protocols for the on-premise connection. Reference: Part 2: Connect to on-premise APIs from SAP Cloud Platform API Management Cloud Foundry Environment | SAP Blogs, How to configure SAP Cloud Connector & Create API using SCP API Management | SAP Blogs

#### NEW QUESTION # 40

You configure an Exception Subprocess. Which event starts the Exception Subprocess?

- A. Start Message Event
- B. Start Escalation
- **C. Error Start Event**
- D. Start Event

**Answer: C**

Explanation:

In SAP Cloud Integration, an Exception Subprocess is used to catch and handle errors during message processing.

It is always triggered by an Error Start Event.

When an error occurs in the main process (e.g., mapping error, adapter error), control is handed to the Exception Subprocess.

Other start events (Message, Escalation, Normal Start) are not valid in an Exception Subprocess.

Hence, the correct event to start the Exception Subprocess is the Error Start Event.

#### NEW QUESTION # 41

From which of the following can you create an API proxy directly? Note: There are 2 correct answers to this question.

- **A. API provider**
- **B. Source URL**
- C. Open Connectors
- D. S/4HANA API

**Answer: A,B**

Explanation:

In SAP API Management (part of Integration Suite), an API Proxy acts as a façade for a backend service. You can create an API proxy directly from:

API Provider # An API provider represents the backend system (e.g., SAP S/4HANA, SAP Gateway, third-party services).

Proxies can be generated from these providers.

Source URL # You can directly specify the backend system's endpoint URL, and an API proxy will be generated from it.

Other options:

Open Connectors # Provides harmonized APIs to third-party apps (e.g., Salesforce, HubSpot), but you don't create proxies directly from them.

S/4HANA API # While S/4HANA APIs can be exposed, they are typically accessed via an API Provider or URL, not directly listed as a creation source.

#### NEW QUESTION # 42

To receive the "sap/s4/beh/businesspartner/va/BusinessPartner/Changed/v1" business event from SAP S

/4HANA Cloud in SAP Integration Suite Event Mesh, which components are required to construct the Topic Subscription string?

- A. Namespace Topic name Separator.
- B. API key Authentication token Client ID
- C. Business Partner ID Change type Event timestamp
- D. Source system Target system Integration flow

**Answer: A**

Explanation:

In SAP Event Mesh, topic subscriptions follow a defined hierarchical string structure:

Namespace # Defines the domain or context (e.g., sap/s4/beh/businesspartner).

Topic name # Specifies the exact event (e.g., BusinessPartner/Changed).

Separators (/) # Used to concatenate namespace and event details into a full subscription string.

Other options:

API key, Client ID, and Authentication token # Used for connectivity but not part of the topic string.

Business Partner ID, Change type, Event timestamp # Payload details, not part of the subscription string.

Source/Target system# Not required for constructing the topic name.

Thus, the correct components are Namespace, Topic name, Separator.

### NEW QUESTION # 43
