API Risk Based Inspection Professional 認定 API-580 試験問題 (Q19-Q24):

質問 # 19

The type of failure mode that likely to occur due to mechanical and metallurgical deterioration

- A. Catastrophic ruptures
- B. Small holes to ruptures
- C. Leaks
- D. Cracks

正解: A

質問 # 20

Detailed information and data are needed for quantitative RBI in order to:

- A. conduct sensitivity analysis in probability models.
- B. assess the higher risks associated with the release of hazardous fluids.
- C. improve the risk rank of an item.
- D. make use of logic and physical models.

正解: D

解説:

According to Section 7.2.3:

"Quantitative RBI uses logic models depicting combinations of events that could result in severe accidents and physical models depicting the progression of accidents... Hence more detailed information and data are needed for a fully quantitative RBI in order to provide input for the models." The need for detailed data in quantitative analysis is primarily to enable the use of logic and physical models in assessing risk.
