Do you like to practice study materials on paper? If you do, you can try our SPLK-3002 exam dumps. SPLK-3002 PDF version is printable, and you can study anywhere and anytime. We offer you free demo for you to have a try before buying, so that you can have a better understanding of SPLK-3002 Exam Dumps what you are going to buy. Free update for 365 days is available, and you can get the latest information about the SPLK-3002 exam dumps timely. The update version will be sent to your email automatically.

We ensure you that if you can't pass the exam just one time by using SPLK-3002 training materials of us, and we will give you full refund. And the money will be returned to your payment account. In addition, SPLK-3002 exam braiddumps are high-quality and accuracy, and they can help you pass the exam successfully. In order to build up your confidence for SPLK-3002 Exam Materials, we are pass guarantee and money back guarantee, so you don't need to worry you will waste your money. We offer you free update for one year foe SPLK-3002 training materials, and our system will send update version to your email automatically.

Free PDF Valid Splunk - SPLK-3002 - Splunk IT Service Intelligence Certified Admin Certification Test Questions

Firstly, our company always feedbacks our candidates with highly-qualified SPLK-3002 study guide and technical excellence and continuously developing the most professional SPLK-3002 exam materials. Secondly, our SPLK-3002 training materials persist in creating a modern service oriented system and strive for providing more preferential activities for your convenience. Last but not least, we have free demos for your reference, as in the following, you can download which SPLK-3002 Exam Braindumps demo you like and make a choice.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q67-Q72):

NEW QUESTION # 67

Within a correlation search, dynamic field values can be specified with what syntax?

- A. %fieldname%
- B. eval(fieldname)
- C. <fieldname /fieldname>
- D. fieldname

Answer: C

Explanation:

Reference:

B is the correct answer because dynamic field values can be specified with <fieldname /fieldname> syntax within a correlation search. This syntax allows you to insert values from fields returned by the correlation search into alert actions such as email subject or body. For example, <host /host> inserts the value of the host field into the email. Reference: [Use dynamic field values in correlation searches in ITSI]

NEW QUESTION # 68

Which of the following is a characteristic of notable event groups?

- A. Notable event groups allow users to adjust threshold settings.
- B. Notable event groups are created in the itsi_tracked_alerts index.
- C. All of the above.
- D. Notable event groups combine independent notable events.

Answer: D

Explanation:

In Splunk IT Service Intelligence (ITSI), notable event groups are used to logically group related notable events, which enhances the manageability and analysis of events:

A).Notable event groups combine independent notable events:This characteristic allows for the aggregation of related events into a single group, making it easier for users to manage and investigate related issues. By grouping events, users can focus on the broader context of an issue rather than getting lost in the details of individual events.

While notable event groups play a critical role in organizing and managing events in ITSI, they do not inherently allow users to adjust threshold settings, which is typically handled at the KPI or service level.

Additionally, while notable event groups are utilized within the ITSI framework, the statement that they are created in the 'itsi_tracked_alerts' index might not fully capture the complexity of how event groups are managed and stored within the ITSI architecture.

NEW QUESTION # 69

Fritz is looking at a Deep Dive with a lane showing the average percent of CPU usage across the four web servers in the web farm. Seeing a spike, he wants to add the graphs of each server on the swim lane, and selects the Lane Overlay Options to do so. No entity overlays are available for the KPI.

What is wrong with his KPI configuration?

- A. He did not enable entity filtering.
- B. He did not split the KPI by entity.
- C. He configured the KPI to split by pseudo#entity.
- D. He configured the service with only three entities.

Answer: B

Explanation:

In Splunk ITSI, swim lane overlays depend on a KPI being split by entity so that each entity's individual time series can be displayed separately in the Deep Dive view. When a KPI is aggregated without an entity split, it produces a single time series value at each timestamp representing the entire group (in this case, the average CPU across all web servers). Because that KPI does not contain per#entity values, ITSI has nothing to overlay

- therefore no entity overlays appear in the Lane Overlay Options. This configuration mistake often happens when a KPI is defined to average values across sources without specifying an entity dimension on which to split results. Entity filtering is a separate feature that enables restricting which entities are considered in display or analytics and does not control availability of swim lane overlays; pseudo#entities are artificial names that do not reflect actual system identities and are not relevant to this error; and having only three entities versus four would not prevent overlays from appearing if the KPI were correctly split by entity. The correct fix is to edit the

KPI definition and configure it to split the metric results by the server entity field, such that each server has its own time series. This then enables Fritz to overlay the individual server CPU graphs on the swim lane as intended.

NEW QUESTION # 70

Where are KPI search results stored?

- A. The default index.
- B. KV Store.
- C. Output to a CSV lookup.
- D. The `itsi_summary` index.

Answer: D

Explanation:

Search results are processed, created, and written to the `itsi_summary` index via an alert action.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/BaseSearch> D is the correct answer because KPI search results are stored in the `itsi_summary` index in ITSI. This index is an events index that stores the results of scheduled KPI searches.

Summary indexing lets you run fast searches over large data sets by spreading out the cost of a computationally expensive report over time.

References: Overview of ITSI indexes

NEW QUESTION # 71

Which of the following is a valid type of Multi-KPI Alert?

- A. Rise over run.
- B. Value over time.
- C. Status over time.
- D. Score over composite.

Answer: B

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/MKA>

B is the correct answer because value over time is a valid type of Multi-KPI Alert in ITSI. A Multi-KPI Alert is a type of alert that triggers when multiple KPIs from one or more services meet certain conditions within a specified time range. Value over time is a condition that compares the current value of a KPI to its previous values over a specified time range. For example, you can create a Multi-KPI Alert that triggers when the CPU usage and memory usage of a service are both higher than their average values in the last 24 hours.
