To keep our questions up to date, we constantly review and revise them to be at par with the latest AZ-800 syllabus for AZ-800 certification.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q110-Q115):

NEW QUESTION # 110
Task 9
You plan to create group managed service accounts (gMSAs).
You need to configure the domain to support the creation of gMSAs.

Answer:

Explanation:

See the solution of this Task below

Explanation:

To configure the domain to support the creation of gMSAs, you need to perform the following steps:

On a domain controller or a computer that has the Remote Server Administration Tools (RSAT) installed, open PowerShell as an administrator and run the following command to install the Active Directory module:

Install-WindowsFeature -Name RSAT-AD-PowerShell

Run the following command to create a Key Distribution Service (KDS) root key, which is required for generating passwords for gMSAs. You only need to do this once per domain:

Add-KdsRootKey -EffectiveImmediately

Wait for at least 10 hours for the KDS root key to replicate to all domain controllers in the domain. Alternatively, you can use the -EffectiveTime parameter to specify a past date and time for the KDS root key, but this is not recommended for security reasons. For more information, see Add-KdsRootKey.

After the KDS root key is replicated, you can create and configure gMSAs using the New-ADServiceAccount and Set-ADServiceAccount cmdlets. For more information, see Create a gMSA and Configure a gMSA.

NEW QUESTION # 111

Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains the servers shown in the following table.

Name	Operating system
Server1	Windows Server 2016
Server2	Windows Server 2016
Server3	Windows Server 2019
Server4	Windows Server 2022
Server5	Windows Server 2022

You need to deploy inbound firewall rules to the servers. The solution must minimize administrative effort.

What should you use?

- A. Microsoft Intune configuration profiles
- B. local security objects
- C. PowerShell Desired State Configuration (DSC)
- D. Group Policy Objects (GPOs)

Answer: D

NEW QUESTION # 112

Your network contains two Active Directory forests and a domain trust as shown in the following exhibit.
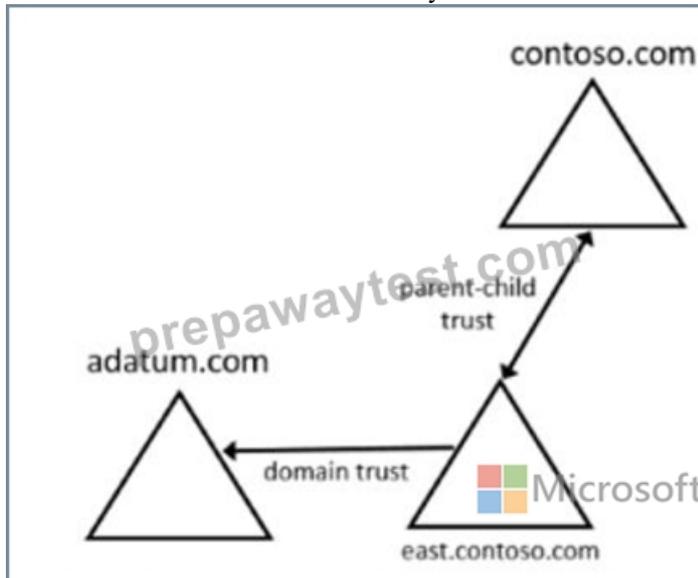

The domain trust has the following configurations:

* Name: adatum.com

* Type: External
* Direction: One-way. outgoing
* Outgoing trust authentication level: Domain-wide authentication

Name	Domain
User1	adatum.com
User2	contoso.com
User3	east.contoso.com

The forests contain the network shares shown in the following table.

Name	In domain
Share1	adatum.com
Share2	contoso.com
Share3	east.contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	○	○
User2 can be assigned permissions for Share1.	○	○
User3 can be assigned permissions for Share1.	○	○

Answer:

Explanation:

Answer Area

Statements	Yes	No
User1 can be assigned permissions for Share3.	☑	○
User2 can be assigned permissions for Share1.	○	☑
User3 can be assigned permissions for Share1.	○	☑

NEW QUESTION # 113

You have an on-premises network that is connected to an Azure virtual network by using a Site-to-Site VPN. Each network contains a subnet that has the same IP address space. The on-premises subnet contains a virtual machine.
You plan to migrate the virtual machine to the Azure subnet.
You need to migrate the on premises virtual machine to Azure without modifying the IP address. The solution must minim administrative effort.
What should you implement before you perform the migration?

- A. Azure Application Gateway
- B. Azure Virtual Network NAT
- C. Azure virtual network peering
- D. Azure Extended Network

Answer: D

Explanation:
Reference:
https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-extended-network

NEW QUESTION # 114

You have a Windows Server container host named Server1.
You create a Dockerfile named df1.
You need to generate a container image by using df1.
Which command should you run?

- A. docker exec
- B. docker build
- C. docker images
- D. docker create

Answer: B

Explanation:
This command is specifically designed to create a container image from a Dockerfile. It reads the instructions in the Dockerfile and builds the image layer by layer.
docker build -t <image_name> -f df1

NEW QUESTION # 115

......

For candidates who want to pass the exam just one time, the valid AZ-800 study materials are quite necessary. We are a professional exam materials provider, and we can offer you valid and effective AZ-800 exam materials. In addition, we have a professional team to collect the latest information for the exam, and if you choose us, we can ensure you that you can get the latest information for the exam. We offer you free update for one year for AZ-800 stidy materials, and the latest version will be sent to your email automatically. If you have any questions, you can consult our online chat service stuff.
