This relieves any sort of anxiety in the candidate mind before the purchase of Fortinet FCP_FAZ_AN-7.6 exam preparation material. This FCP_FAZ_AN-7.6 exam study material is offered to you at a very low price. We also offer up to 365 days of free updates on Fortinet FCP_FAZ_AN-7.6 Dumps after the date of purchase.

Fortinet FCP_FAZ_AN-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	Log Analysis: This domain focuses on examining and interpreting logs, events, and incidents, using FortiView dashboards and widgets for data visualization, and diagnosing report generation issues.
Topic 2	Reports: This domain explains the use of reports, charts, and datasets for presenting security intelligence, covers report configuration to meet organizational requirements, and includes troubleshooting report generation problems.

Topic 3	Features and concepts: This domain covers FortiAnalyzer's integration with Security Fabric for log collection, the technical processes of log data flow, normalization and parsing, and the SOC features available for security monitoring and analysis.
Topic 4	SOC operation and automation: This domain addresses configuring events and event handlers, setting up incidents and indicators for threat tracking, configuring playbooks and fabric automation for orchestrated responses, and troubleshooting automation workflow issues.

Accurate FCP_FAZ_AN-7.6 Certified bring you Effective Passing FCP_FAZ_AN-7.6 Score Feedback for Fortinet FCP - FortiAnalyzer 7.6 Analyst

SureTorrent wants to win the trust of Fortinet FCP_FAZ_AN-7.6 exam candidates at any cost. To achieve this objective SureTorrent is offering some top features with FCP_FAZ_AN-7.6 exam practice questions. These prominent features hold high demand and are specifically designed for quick and complete FCP_FAZ_AN-7.6 Exam Questions preparation.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q49-Q54):

NEW QUESTION # 49

Refer to the exhibit. What is the purpose of using the Chart Builder feature on FortiAnalyzer?

- A. To add charts directly to generate reports in the current ADOM.
- B. To build a dataset and chart based on the filtered search results
- C. To build a chart automatically based on the top 100 log entries
- D. To add a new chart under FortiView to be used in new reports

Answer: B

Explanation:

A quick way to build a custom dataset and chart is to use the chart builder tool. This tool is located in LogView, and allows you to build a dataset and chart automatically, based on your filtered search results. In LogView, set filters to return the logs you want.

NEW QUESTION # 50

In firmware version 7.6, how does on-premises FortiAnalyzer store logs?

- A. Uses ClickHouse database

- B. Uses ElasticSearch database
- C. Uses Postgres SQL database
- D. Uses MySQL database

Answer: A

Explanation:

In FortiAnalyzer firmware version 7.6, on-premises deployments use the ClickHouse database engine for log storage and analytics. ClickHouse is optimized for high-performance columnar storage and fast querying of large volumes of log data.

NEW QUESTION # 51

After generating a report, you notice the information you were expecting to see is not included in it. However, you confirm that the logs are there.

- A. Increase the report utilization quota.
- B. Disable auto-cache.
- C. Test the dataset
- D. Check the time frame covered by the report.

Answer: C,D

Explanation:

When a generated report does not contain the expected information even though the logs are confirmed to be present, it typically indicates an issue with the report's configuration. There are a few common reasons this might happen:

Option A - Check the Time Frame Covered by the Report:

Reports are generated based on a specific time frame. If the report's time frame does not cover the period when the relevant logs were collected, those logs won't appear in the report output.

Verifying and adjusting the time frame is essential to ensure the report includes all relevant data.

Option D - Test the Dataset:

Datasets determine which logs and data fields are pulled into the report. If a dataset is configured incorrectly or does not include the required log fields, it could lead to missing information. Testing the dataset allows you to verify that it's correctly configured and pulling the expected data.

NEW QUESTION # 52

Which two statements about exporting and importing playbooks are true? (Choose two.)

- A. Playbooks can be imported to a different FortiAnalyzer device, but only if the connectors already exist
- B. A playbook that was disabled when it was exported will be disabled when it is imported.
- C. You can export only one playbook at a time.
- D. You can import a playbook even if there is another one with the same name in the destination

Answer: B,D

Explanation:

Playbooks are imported with the same status they had (enabled or disabled) when they were exported.

If the imported playbook has the same name as an existing one, FortiAnalyzer will create a new name that includes a timestamp to avoid conflicts.

NEW QUESTION # 53

After generating a report, you notice the information you were expecting to see is not included in it. However, you confirm that the logs are there:

Which two actions should you perform? (Choose two.)

- A. Increase the report utilization quota.
- B. Disable auto-cache.
- C. Test the dataset.
- D. Check the time frame covered by the report.

Answer: C,D

Explanation:

When a generated report does not include the expected information despite the logs being present, there are several factors to check to ensure accurate data representation in the report.

* Option A - Check the Time Frame Covered by the Report:

* Reports are generated based on a specified time frame. If the time frame does not encompass the period when the relevant logs were collected, those logs will not appear in the report. Ensuring the time frame is correctly set to cover the intended logs is crucial for accurate report content.

* Conclusion: Correct.

* Option B - Disable Auto-Cache:

* Auto-cache is a feature in FortiAnalyzer that helps optimize report generation by using cached data for frequently used datasets. Disabling auto-cache is generally not necessary unless there is an issue with outdated data being used. In most cases, it does not directly impact whether certain logs are included in a report.

* Conclusion: Incorrect.

* Option C - Increase the Report Utilization Quota:

* The report utilization quota controls the resource limits for generating reports. While insufficient quota might prevent a report from generating or completing, it does not typically cause specific log entries to be missing. Therefore, this option is not directly relevant to missing data within the report.

* Conclusion: Incorrect.

* Option D - Test the Dataset:

* Datasets in FortiAnalyzer define which logs and fields are pulled into the report. If a dataset is misconfigured, it could exclude certain logs. Testing the dataset helps verify that the correct data is being pulled and that all required logs are included in the report parameters.

* Conclusion: Correct.

Conclusion:

* Correct Answer: A. Check the time frame covered by the report and D. Test the dataset.

* These actions directly address the issues that could cause missing information in a report when logs are available but not displayed.
