Our brand has marched into the international market and many overseas clients purchase our HPE7-J02 exam dump online. As the saying goes, Rome is not build in a day. The achievements we get hinge on the constant improvement on the quality of our HPE7-J02 latest study question and the belief we hold that we should provide the best service for the clients. The great efforts we devote to the HP exam dump and the experiences we accumulate for decades are incalculable. All of these lead to our success of HPE7-J02 learning file and high prestige.

HP HPE7-J02 Exam Syllabus Topics:

Topic	Details
Topic 1	Planning and Validating Storage Solutions: This section assesses the role of Storage Consultants in evaluating complex, multi-vendor environments. Candidates will demonstrate their ability to plan, size, and validate storage solutions tailored for enterprise workloads, ensuring proposals meet customer requirements effectively.
Topic 2	Remote Support Configuration: This small but important section tests the ability of System Administrators to configure HPE solutions for remote support, ensuring proactive monitoring and timely resolution of technical issues.
Topic 3	Storage Transport in Multi-Site Solutions: This section evaluates the skills of Storage Architects in describing and applying transport technologies within multi-site solutions. It involves distinguishing between SAN topologies, analyzing transport components, and recommending advanced data protection methods to ensure reliability across enterprise environments.
Topic 4	Advanced Troubleshooting and Prevention: This section focuses on the ability of Support Engineers to identify root causes of issues and implement advanced preventive measures. It emphasizes building resilience in customer environments to minimize future disruptions.
Topic 5	HPE Storage Portfolio and Strategy: This domain measures the knowledge of Solution Advisors in positioning HPE's Storage portfolio within enterprise infrastructure. Candidates must understand HPE Storage hardware, procurement options, available tools, and the overarching storage strategy, including its relevance to enterprise-scale solutions.

Free PDF HPE7-J02 - Unparalleled Sample Advanced HPE Storage Integrator Solutions Written Exam Questions Answers

Many candidates compliment that HP HPE7-J02 study guide materials are best assistant and useful for qualification exams, they have no need to purchase other training courses or books to study, and only by practicing our HP HPE7-J02 Exam Braindumps several times before exam, they can pass exam in short time easily.

HP Advanced HPE Storage Integrator Solutions Written Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

Refer to the exhibit.

A junior engineer is expanding a StoreOnce deployment for a law firm with a hybrid environment. The customer already has Veeam backing up to StoreOnce 3660 Gen 4 at both primary and secondary sites. They want to add Cloud Bank Storage (CBS) to archive into AWS Glacier tier for compliance. The junior engineer has added Cloud Bank licenses for the 80TB onsite capacity at the primary office.

Question: What does the junior engineer need to add to enable this scenario?

- A. Federated Management
- B. Catalyst License for StoreOnce-B
- C. Detach License on StoreOnce-A
- D. Cloud Bank Storage for AWS Glacier

Answer: C

NEW QUESTION # 47

A global financial services company is looking to enhance its disaster recovery (DR) capabilities. They operate VMware workloads across multiple data centers and a mix of AWS and Azure cloud workloads. They need a solution that can replicate data with near-zero recovery point objectives (RPOs) and orchestrate rapid recovery of critical applications in case of a site-wide failure.

- A. CommVault
- B. Zerto
- C. SimpliVity
- D. Cohesity

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

Zerto, now part of HPE, provides continuous data protection (CDP) with near-zero RPOs and very low RTOs. It supports VMware workloads, as well as hybrid cloud deployments with AWS and Azure. Zerto is specifically designed for disaster recovery orchestration, enabling automated failover, failback, and application-consistent protection across sites and cloud environments.

Distractors:

B (CommVault): Primarily a backup/recovery and data management platform - RPOs are not near-zero.

C (Cohesity): Strong in backup, secondary storage, and ransomware recovery, but not near-zero RPO DR orchestration.

D (SimpliVity): Hyperconverged infrastructure with built-in backup, but not optimized for large-scale multi- cloud DR.

Key Concept: Continuous Data Protection (Zerto) for hybrid/multi-cloud disaster recovery.

Reference: HPE Zerto DR for Hybrid and Multi-cloud Environments.

NEW QUESTION # 48

Your customer has just gone through a merger and is consolidating datacenters. They are currently using a mix of manufacturers. They are evaluating whether to consolidate on HPE as their new standard. You are helping them size their new virtualized environment.

What additional information do you need to decide on an assessment tool?

- A. If they are using AWS or Azure public cloud storage
- B. If any equipment has expired support contracts
- **C. If they are virtualized on VMware or Hyper-V**
- D. If they are only purchasing in a CapEx model

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

The choice of assessment tool (e.g., HPE CloudPhysics for VMware vs. CloudPhysics.vhdx collector for Hyper-V) depends primarily on the virtualization platform in use. VMware and Hyper-V require different collectors, and this is the deciding factor for tool selection.

Distractors:

A: Public cloud use matters for hybrid sizing but not for tool selection.

C: Expired contracts are unrelated to tool choice.

D: Procurement model (CapEx vs. GreenLake) is separate from sizing assessment.

Key Concept: Assessment tool choice = based on hypervisor platform (VMware vs Hyper-V).

NEW QUESTION # 49

Your customer is a software development company using Kubernetes, Canonical, and Tanzu. They are expanding their Dev/Ops container environment and are considering HPE Private Cloud Business Edition (PCBE).

What is a unique benefit that HPE PCBE would bring to this customer's environment?

- A. Multi-tenant VASA
- **B. Full stack intelligence**
- C. Container level protection
- D. Infinite scale to the customer at no additional cost

Answer: B

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

HPE PCBE provides full-stack intelligence across compute, storage, and virtualization layers. It integrates with Kubernetes distributions like Tanzu and Canonical, giving visibility and lifecycle automation across the entire stack. This helps Dev/Ops teams simplify operations, capacity planning, and performance optimization in hybrid environments.

Distractors:

B: Multi-tenant VASA applies more to VMware vVols in multi-tenant setups.

C: No platform offers "infinite scale at no cost" - this is misleading.

D: Container-level protection is delivered through HPE CSI with data protection solutions, not unique to PCBE.

Key Concept: HPE PCBE delivers unified lifecycle management with full-stack intelligence.

Reference: HPE Private Cloud Business Edition Overview.

NEW QUESTION # 50

The storage solution based on the exhibit is deployed at a customer site.

How can the sequential read performance be enhanced with this setup?

- A. By adding a third node to the solution
- B. By adding more NVMe media to the solution
- **C. By increasing the amount of 10Gb NICs**
- D. By upgrading the nodes to 32-core IOMs

Answer: C

Explanation:

Detailed Explanation:

Rationale for Correct Answer:

The exhibit shows an Alletra MP configuration delivering ~4.6 GB/s (256 KB sequential read) with four 10 Gb host ports. That throughput is close to the aggregate front-end bandwidth ceiling of 4×10 GbE (#5 GB/s raw, less with protocol overhead). For large-block sequential workloads, the front-end link budget is often the bottleneck; adding additional 10 GbE ports (or moving to higher-speed links) increases available host bandwidth and raises sustained sequential read throughput. This aligns with HPE sizing guidance: scale host connectivity to meet sequential throughput targets before adding media.

Analysis of Incorrect Options (Distractors):

B: Adding a third node isn't applicable to a 2-node HA block pair and would not address a front-end bandwidth limit.

C: More controller cores don't raise link-level throughput if host I/O is already constrained by port bandwidth.

D: Adding NVMe media primarily boosts IOPS/parallelism; sequential read is bounded here by front-end ports.

Key Concept: Sequential throughput is front-end bandwidth bound; scale host ports to increase GB/s.

Reference: HPE Alletra MP Performance and Sizing best practices (host connectivity scaling for throughput).
