JN0-336 Latest Test Prep & New Study JN0-336 Questions

Passing the Security, Specialist (JNCIS-SEC) exam at first attempt is a goal that many candidates strive for. However, some of them think that good Juniper JN0-336 study material is not important, but this is not true. The right JN0-336 preparation material is crucial for success in the exam. And applicants who don't find updated JN0-336 prep material ultimately fail in the real examination and waste money. That's why ActualVCE offers actual JN0-336 exam questions to help candidates pass the exam and save their resources.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q56-Q61):

NEW QUESTION # 56
What information does encrypted traffic insights (ETI) use to notify SRX Series devices about known malware sites?

- A. dynamic address groups
- B. certificates
- C. MAC addresses
- D. domain names

Answer: D

Explanation:
Encrypted traffic insights (ETI) uses domain names to notify SRX Series devices about known malware sites. ETI is a feature of the SRX Series firewall that can detect and block malware that is hidden in encrypted traffic. It works by analyzing the domain names of the websites that the encrypted traffic is attempting to access. If the domain name matches a known malware site, ETI will send an alert to the SRX Series device, which can then take appropriate action to block the traffic. ETI is a useful tool for protecting against threats that attempt to evade detection by hiding in encrypted traffic.

NEW QUESTION # 57
Your manager asks you to provide firewall and NAT services in a private cloud.
Which two solutions will fulfill the minimum requirements for this deployment? (Choose two.)

- A. a cSRX for firewall services and a separate cSRX for NAT services
- B. a vSRX for firewall services and a separate vSRX for NAT services
- C. a single vSRX
- D. a single cSRX

Answer: C,D

Explanation:
A single vSRX instance is capable of handling both firewall and NAT services simultaneously. This solution provides a streamlined and resource-efficient way to secure and manage network traffic within a private cloud environment.
Similar to the vSRX, a single cSRX can also provide both firewall and NAT services. The cSRX, being a containerized version of the SRX, is particularly suited for environments where high density and microservices architectures are used, offering high performance in a compact form factor.

NEW QUESTION # 58
Exhibit
You just finished setting up your command-and-control (C&C) category with Juniper ATP Cloud. You notice that all of the feeds have zero objects in them.
Which statement is correct in this scenario?

- A. No action is required, the feeds take a few minutes to download.
- B. Set the maximum C&C entries within the Juniper ATP Cloud GUI.
- C. Use the commit full command to start the download.
- D. The security intelligence policy must be configured; on a unified security policy

Answer: A

Explanation:
According to the Juniper Networks JNCIS-SEC Study Guide, when you set up your command-and- control (C&C) category with Juniper ATP Cloud, all of the feeds will initially have zero objects in them.
This is normal, as it can take a few minutes for the feeds to download. No action is required in this scenario and you will notice the feeds start to populate with objects once the download is complete.

NEW QUESTION # 59

Your network uses a single JSA host and you want to implement a cluster.
In this scenario, which two statements are correct? (Choose two.)

- A. The primary and secondary hosts must be configured with the same storage devices.
- B. The software versions on both primary and secondary hosts
- C. The secondary host can backup multiple JSA primary hosts.
- D. The cluster virtual IP will need an unused IP address assigned.

Answer: B,D

Explanation:
According to the Juniper Networks JNCIP-SEC Study Guide, when setting up a cluster with a single JSA host, both the primary and secondary hosts must have the same software version installed. Additionally, an unused IP address must be assigned to the cluster virtual IP. The primary and secondary hosts do not need to be configured with the same storage devices, and the secondary host cannot be used to backup multiple JSA primary hosts.

NEW QUESTION # 60
You want to manually failover the primary Routing Engine in an SRX Series high availability cluster pair.
Which step is necessary to accomplish this task?

- A. Issue the set chassis cluster disable reboot command on the primary node.
- B. Adjust the priority in the configuration on the secondary node.
- C. Manually request the failover and identify the secondary node
- D. Implement the control link recover/ solution before adjusting the priorities.

Answer: C

Explanation:
This step involves issuing a command to manually initiate a failover from the primary Routing Engine to the secondary. This can typically be done using a command like request chassis cluster failover redundancy-group <group-number> node <node-id>, where <group-number> is the redundancy group you are failing over, and <node-id> specifies the node to which you want to failover (usually the secondary node). This command forces the designated node to take over as primary for the specified redundancy group.

NEW QUESTION # 61
