And you will pass for sure with our SSM learning quiz.

Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q46-Q51):

NEW QUESTION # 46

Team A has decided to use the IP Iteration to continue the finalizing Feature delivery work they have been working on for the past two Iterations. What is one effect Team A might experience by continuing to stay heads-down rather than using the IP Iteration as intended?

- A. Individual team members could lose an opportunity to consider their team work more holistically
- B. Individual team members could lose an opportunity to learn from one another
- C. Individual team members could lose an opportunity to refresh their motivation
- D. Individual team members could lose an opportunity to keep their technical skills current

Answer: A

Explanation:

By continuing to stay heads-down on the finalizing Feature delivery work, Team A might miss the chance to reflect on their team work more holistically and identify areas for improvement. The IP Iteration is intended to provide time for the team to participate in the Inspect and Adapt event, where they can review their PI performance, analyze the root causes of any issues, and create an improvement backlog. The IP Iteration also allows the team to engage in innovation and learning activities, such as hackathons, that can foster creativity, collaboration, and experimentation. These activities can help the team generate new ideas, solutions, and feedback that can benefit their future work. By skipping the IP Iteration, Team A might lose the opportunity to learn from their past experiences, improve their processes, and innovate their products.
