## C\_CPI\_2506 Dump Collection, C\_CPI\_2506 Dumps Questions

Our C\_CPI\_2506 Exam Questions can help you pass the exam to prove your strength and increase social competitiveness. Although it is not an easy thing for somebody to pass the C\_CPI\_2506 exam, but our C\_CPI\_2506 exam torrent can help aggressive people to achieve their goals. This is the reason why we need to recognize the importance of getting the test SAP certification. More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification certifications to prove their ability, can we win over rivals in the social competition.

## SAP Certified Associate - Integration Developer Sample Questions (Q47-Q52):

### NEW QUESTION # 47

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. AMQP
- B. SFTP
- C. OData
- D. Mail

**Answer: C**

Explanation:

For a synchronous call to a remote HTTP API in an integration flow:

The OData adapter (or HTTP adapter) is used to perform synchronous request-reply communication with REST-based services.

AMQP # Messaging protocol, not synchronous.

SFTP # File-based transfer, asynchronous.

Mail # For SMTP/IMAP, not synchronous API calls.

Thus, the correct adapter for a synchronous remote API call is OData (or HTTP adapter, depending on configuration).

#### NEW QUESTION # 48

What are API Management components? Note: There are 2 correct answers to this question.

- A. Authorization server
- B. API Entity
- C. Product
- D. API Designer

**Answer: C,D**

Explanation:

Key API Management components in SAP Integration Suite:

API Designer # Used to design APIs, import specifications (OpenAPI, RAML), and define metadata.

Product # Groups one or more APIs into a package that can be published to API Business Hub Enterprise.

Other options:

Authorization Server # Part of security infrastructure, not a direct API Management component.

API Entity # Not a defined component; the actual entities are API Proxies, Providers, and Products.

Thus, correct components are API Designer and Product.

#### NEW QUESTION # 49

You want to split a message that contains recurring child nodes. Which of the following splitter types can you use? Note: There are 2 correct answers to this questions.

- A. Iterating Splitter
- B. PKCS#7/CMS Splitter
- C. General Splitter
- D. EDI Splitter

**Answer: A,C**

Explanation:

To split a message that contains recurring child nodes, you can use a General Splitter or an Iterating Splitter. A General Splitter allows you to split a message based on an XPath expression that defines the splitting criteria. An Iterating Splitter allows you to split a message based on an XPath expression that defines the repeating element. Reference: Modernize Integration with SAP Integration Suite | openSAP

#### NEW QUESTION # 50

What kind of editor can you use to manipulate integration flows?

- A. Code editor
- B. Command-line editor
- C. Graphical editor

**Answer: C**

Explanation:

To manipulate integration flows, you can use a graphical editor that is provided by SAP Integration Suite. The graphical editor allows you to visualize and edit your integration flows using a drag-and-drop interface. It also provides a palette of icons that represent different integration components and actions, such as senders, receivers, routers, mappers, transformers, and so on. You can use the graphical editor to design and configure complex integration scenarios in a user-friendly way. #### NEW QUESTION # 51

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. AMQP
- B. SFTP
- C. OData
- D. Mail

**Answer: C**

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources.
