Our DA0-001 exam prep will give you a complete after-sales experience. You can consult online no matter what problems you encounter. You can get help anywhere, anytime in our DA0-001 test material. DA0-001 test questions have very high quality services in addition to their high quality and efficiency. If you use DA0-001 test material, you will have a very enjoyable experience while improving your ability. We have always advocated customer first. If you use our learning materials to achieve your goals, we will be honored. DA0-001 exam prep look forward to meeting you.

CompTIA Data+ Certification Exam Sample Questions (Q260-Q265):

NEW QUESTION # 260

Given the following table:

Which of the following methods is the best way to describe the changes in the values in the table?

- A. Average
- B. Median
- C. Range
- D. Standard deviation

Answer: C

NEW QUESTION # 261

A survey asks participants to rate a company on a scale of one to ten. Which of the following best describes the rating variable?

- A. Continuous
- B. Ordinal
- C. Categorical
- D. Nominal

Answer: B

Explanation:

The rating variable in a survey where participants rate a company on a scale of one to ten is best described as ordinal. This is because the ratings are ranked in order, with each number representing a position on a scale of satisfaction or quality. The numbers are not just labels (which would be nominal), nor do they represent a continuous spectrum (which would be continuous). They also do not fit the definition of categorical, as that implies non-ordered groups or categories. In an ordinal scale, the order of the values is significant and meaningful.

Reference:

Qualtrics explains that ordinal scales have answer sets that occur in a logical and systematic order, providing qualitative data. Zonka Feedback describes a 1 to 10 rating scale survey, indicating that the numbers represent a ranking from most negative to most positive experience, which aligns with the characteristics of an ordinal scale.

NEW QUESTION # 262

Which of the following is an example of a discrete variable?

- A. The number of people in an office
- B. The temperature of a hot tub
- C. The height of a horse
- D. The time to complete a task

Answer: A

NEW QUESTION # 263

A data analyst needs to calculate the mean for Q1 sales using the data set below:

Which of the following is the mean?

- A. \$2,466.18
- B. \$2,667.60
- C. \$3,082.72

- D. \$12,330.88

Answer: C

Explanation:

The mean is the average of all the values in a data set. To calculate the mean, we add up all the values and divide by the number of values. In this case, the mean for Q1 sales is $(\$2,000 + \$3,000 + \$4,000 + \$2,500 + \$3,500) / 5 = \$3,082.72$ Reference: CompTIA Data+ Certification Exam Objectives, page 9

NEW QUESTION # 264

When analyzing the values of two variables, you decide to convert both variables so they are on a scale of 0 to 1.

What term describes this action?

- A. Transposition.
- **B. Normalization.**
- C. Filtering.
- D. Aggregation.

Answer: B

Explanation:

Explanation

Normalization is the process of reorganizing data in a database so that it meets two basic requirements: There is no redundancy of data, all data is stored in only one place. Data dependencies are logical, all related data items are stored together.

Put simply, data normalization ensures that your data looks, reads, and can be utilized the same way across all of the records in your customer database. This is done by standardizing the formats of specific fields and records within your customer database.

NEW QUESTION # 265

.....

TestsDumps also offers simple and easy-to-use CompTIA Data+ Certification Exam (DA0-001) Dumps PDF files of real CompTIA DA0-001 exam questions. It is easy to download and use on smart devices.
