Valid Exam SAP C-SEC-2405 Preparation, C-SEC-2405 Valid Guide Files

SAP C-SEC-2405 So as you see, we are the corporation with ethical code and willing to build mutual trust between our customers, Latest C-SEC-2405 dumps exam training resources in PDF format download free try from SAP Certified Associate - Security Administrator is the name of SAP Certified Associate - Security Administrator exam dumps which covers all the knowledge points of the real SAP Certified Associate - Security Administrator exam, SAP C-SEC-2405 We will try our best to help our customers get the latest information about study materials. The size of the problem really is unknown, C-SEC-2405 revisited that tricky question: is something something worth it, But enough about this horrible dystopian future, C-SEC-2405 Exam Preparation Platform are attracting a lot of attention these days.

SAP Certified Associate - Security Administrator Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which tool can you use to modify the entities schema content across multiple repositories?

- A. SAP Cloud Identity Services Transformation Editor
- B. SAP Business Application Studio
- C. SAP BTP Account Explorer
- D. **SAP Cloud Identity Services Schemas app**

Answer: D

Explanation:

The SAP Cloud Identity Services Schemas app is the tool used to modify entities schema content across multiple repositories in SAP's identity management framework. This app provides a centralized interface for defining and managing schema attributes, such as user or group properties, ensuring consistency across different identity repositories. Administrators can use it to customize schemas to meet specific organizational needs, supporting integration with various SAP and non-SAP systems. The SAP BTP Account Explorer is used for managing accounts and subaccounts, not schema modifications. The SAP Cloud Identity Services Transformation Editor focuses on data transformations during provisioning, not schema management. SAP Business Application Studio is a development environment for building applications, not for managing identity schemas. The Schemas app's ability to handle schema content across repositories ensures unified identity data structures, enhancing interoperability and security in SAP Cloud Identity Services, making it the ideal tool for this purpose.

NEW QUESTION # 56

What does SAP recommend you do when you transport a custom leading business role in SAP S/4HANA Cloud Public Edition?

- A. Add all other leading business roles from the same Line of Business as dependencies to the Software Collection.
- B. Add all derived business roles as dependencies to the Software Collection.
- C. **Add the pre-delivered business role that was used as a template to create the custom leading business role to the Software Collection.**

Answer: C

Explanation:

When transporting a custom leading business role in SAP S/4HANA Cloud Public Edition:

* Include the Template Role (C):

* SAP recommends adding the pre-delivered business role (template) to the software collection. This ensures that all dependencies and baseline configurations are included during the transport.

* Maintain Consistency:

* Adding the template role ensures that the custom role remains functional across environments and avoids issues related to missing dependencies.

NEW QUESTION # 57

Your developer has created a new custom transaction for your SAP S/4HANA on-premise system and has provided you a list of the authorizations needed to execute the new ABAP program. "What must you do to ensure that each required authorization is automatically created every time this new custom transaction is added to a PFCG role?

- A. Maintain each authorization in transaction SU22 and set the Check Indicator value to
- B. Maintain each authorization in transaction SU24 and set the Default Status to "Yes".
- **C. Maintain each authorization object in transaction SU24 and set the Default Status to "Yes".**
- D. Maintain each authorization object in transaction SU22 and set the Default Status to "Yes".

Answer: C

NEW QUESTION # 58

Following an upgrade of your SAP S/4HANA on-premise system to a higher release, you perform a Modification Comparison using SU25.

What does this comparison do?

- A. It compares your changes to the SAP defaults in USOBX_C and USOBT_C with the new SAP defaults in the current release and allows you to make adjustments.
- B. It compares the Role Maintenance data from the previous release with the data for the current release and writes any new default values in tables USOBX_C and USOBT_C.
- C. It compares the Role Maintenance data from the current release with the data for the previous release and allows you to adjust any custom default values in tables USOBX and USOBT.
- **D. It compares your changes to the SAP defaults in USOBX and USOBT with the new SAP defaults in the current release and allows you to make adjustments.**

Answer: D

NEW QUESTION # 59

What must you do before you can use transaction PFCG? Note: There are 2 correct answers to this question.

- **A. Set the system profile parameter auth/no_check_in_some_cases to Y.**
- B. Set the system profile parameter auth/no_check_in_some_cases to N.
- **C. Fill tables USOBT and USOBX with the SAP-delivered authorization default values.**
- D. Fill tables USOBT_C and USOBX_C with the SAP-delivered authorization default values.

Answer: A,C

Explanation:

Before using transaction PFCG (Role Maintenance) in SAP systems, two prerequisites must be met. First, tables USOBT (Authorization Object Defaults) and USOBX (Check Indicators) must be filled with SAP-delivered authorization default values, which provide the standard authorization objects and check indicators for transactions. These tables, maintained via transaction SU25, ensure that PFCG can propose appropriate authorizations when building roles. Second, the system profile parameter auth/no_check_in_some_cases must be set to Y, enabling the system to bypass authorization checks for certain transactions, which is necessary for PFCG to function correctly during role creation and maintenance. Setting this parameter to N would enforce stricter checks, potentially restricting PFCG functionality. Tables USOBT_C and USOBX_C are customer-specific and not required for initial PFCG setup, as they store customized values rather than SAP defaults.

These steps ensure that PFCG operates effectively, supporting secure and efficient role management in SAP environments.

NEW QUESTION # 60

No matter how old you are, no matter what kind of job you are in, as long as you want to pass the professional qualification exam, C-SEC-2405 exam dump must be your best choice. All the materials in C-SEC-2405 test guide is available in PDF, APP, and PC versions. If you are a student, you can take the time to simulate the real test environment on the computer online.
