It is our consistent aim to serve our customers wholeheartedly. Our AB-730 study materials try to ensure that every customer is satisfied, which can be embodied in the convenient and quick refund process. Although the passing rate of our AB-730 Study Materials is close to 100 %, if you are still worried, we can give you another guarantee: if you don't pass the exam, you can get a full refund. Yes, this is the truth.

Microsoft AI Business Professional Sample Questions (Q53-Q58):

NEW QUESTION # 53

Select the answer that correctly completes the sentence.

Answer:

Explanation:

NEW QUESTION # 54

You use Microsoft 365 Copilot to create a proposal in Microsoft Word based on a document in a Microsoft SharePoint library. You need to ensure that the information cited in the proposal is accurate.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Manually verify the citations in the generated content.
- B. Create an agent that contains your organization's editorial standards and use the agent to verify the citations.
- C. Create a notebook that contains all the reference material and use the notebook to verify the citations.
- D. Use Copilot in Word to verify the citations.

Answer: A

Explanation:

To ensure cited information is accurate, Microsoft's AI guidance emphasizes human verification of AI-generated outputs, especially when the content will be used in formal business documents. Even when Copilot grounds responses in SharePoint files, it can still misinterpret text, summarize imprecisely, or attribute a statement to the wrong section of a source. The most reliable way to confirm

accuracy is to check each citation against the original SharePoint document and validate that the claim is supported exactly as written.

Option A is the best answer because manual verification is the definitive control for accuracy and accountability. Option B may help by asking Copilot to re-check or restate where information came from, but it is still an AI-generated confirmation and does not replace direct source validation. Options C and D can improve consistency and reuse of standards or references, but they do not guarantee citation correctness; they still depend on model interpretation.

Therefore, the best approach is to manually verify the citations in the generated proposal content.

NEW QUESTION # 55

You use the Researcher agent in Microsoft 365 Copilot to generate a report. What can you use to verify whether the report was generated by using valid sources?

- A. citations
- B. memory
- C. capabilities
- D. instructions

Answer: A

Explanation:

To check if valid sources were used in a report generated by the Researcher agent in Microsoft 365 Copilot, you should leverage the built-in citation, monitoring, and verification features provided by the tool.

Here is how to validate the sources:

*-> 1. Check In-Line Citations and References

Click Citations: The Researcher agent provides a structured report containing key insights, source citations, and suggested next steps. Within the report, click on the numbered citations to view a preview of the source.

Access Full Source Links: Click on the preview to open the actual website or document to verify the information's accuracy.

Check "See More" for Deep Research: For extensive reports, click the "see more" button to view the full list of sources used.

2. Monitor the "Thought Process"

3. Verify Source Types (Work vs. Web)

4. Validate with Follow-up Queries

NEW QUESTION # 56

Hotspot Question

You use Microsoft 365 Copilot.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can delete your conversation history only if your administrator allows you to do so.	<input type="radio"/>	<input type="radio"/>
When you delete a conversation, the associated files stored in Microsoft SharePoint are also deleted.	<input type="radio"/>	<input type="radio"/>
When you uninstall a Copilot agent, all the conversations associated with the agent are retained.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Explanation:

Box 1: No

No - You can delete your conversation history only if your administrator allows you to do so.

Users can generally delete their Microsoft 365 Copilot conversation history, which often syncs across apps like Teams and Word to protect privacy. While users can manage their own data via the privacy dashboard, specific organization-wide retention policies set by administrators may dictate how long data is stored or if it can be permanently removed.

Box 2: No

No - When you delete a conversation, the associated files stored in Microsoft SharePoint are also deleted.

Deleting a Microsoft 365 Copilot conversation does not automatically delete associated files stored in SharePoint or OneDrive.

While the interaction history (prompts and answers) is removed, saved files, documents, or content generated by Copilot that were saved in Microsoft

365 apps remain intact.

Chat History vs. Files: Deleting Copilot chat history removes the conversation record but not the files linked or created in the process.

Copilot Pages/Notebooks: If a dedicated Copilot Page was created, it is stored in a SharePoint container. While individual notebook deletions are not recoverable by end-users, this generally applies to the workspace itself rather than external files referenced, say Microsoft Learn.

Persistent Data: Any content Copilot helped generate that you have already saved in Word, PowerPoint, or other apps is preserved.

Deletion Scope: The deletion process applies to activity history across Excel, Forms, Loop, OneNote, Outlook, Planner, PowerPoint, Teams, and Word.

To remove files, you must manually delete them from their stored location in SharePoint or OneDrive.

Box 3: Yes

Yes - When you uninstall Copilot agent, all the conversations associated with the agent are retained.

When you uninstall a Microsoft 365 Copilot agent, conversations and saved prompts associated with that agent are generally retained in the user's history and the Copilot Prompt Gallery. The underlying interaction data, stored in Dataverse or user mailboxes, persists for 18 months by default.

Key details regarding agent uninstallation:

Saved Prompts: Even if an agent is removed, saved prompts remain in the Microsoft Support Copilot Prompt Gallery.

*-> Conversation History: Chats with agents (including workflow agents) are retained in Microsoft

365 conversation history, not deleted upon uninstallation.

Data Retention: Copilot typically retains interaction history for 18 months, which can be managed via Microsoft Support privacy settings.

Reinstallation: If the agent is reinstalled, previously saved prompts can be reassociated with it.

To permanently delete conversation history, users must manually clear it from their Microsoft Support privacy dashboard or through specific retention policies.

NEW QUESTION # 57

You are comparing the difference between Microsoft 365 Copilot and Microsoft 365 Copilot Chat.

What is available in both versions?

- A. Copilot Pages
- B. the Researcher agent
- C. Copilot Notebooks

Answer: A

Explanation:

A key feature available in both Microsoft 365 Copilot and Microsoft 365 Copilot Chat is Enterprise Data Protection (EDP), which ensures that user data and prompts are not used to train the underlying AI models.

Both versions also support key productivity features when signed in with a work or school account, including:
