# Valid CTFL-AT Test Review - ISQI Realistic Valid ISTQB Certified Tester - Foundation Level Extension - Agile Tester Test Review Pass Guaranteed Quiz

What's more, part of that TrainingDump CTFL-AT dumps now are free: https://drive.google.com/open?id=1_XBx9Iy8WXTYtPkHdiDdZDNHaFD9NhZl

When finding so many exam study material for TrainingDump CTFL-AT exam dumps, you may ask why to choose ISQI CTFL-AT training dumps. Now, we will clear your confusion. Firstly, our questions and answers of CTFL-AT pdf dumps are compiled and edited by highly-skilled IT experts. Besides, we have detailed explanation for the complex issues, thus you can easy to understand. What's more, the high hit rate of CTFL-AT Questions can ensure you 100% pass.

There have many shortcomings of the traditional learning methods. If you choose our CTFL-AT test training, the intelligent system will automatically monitor your study all the time. Once you study our CTFL-AT certification materials, the system begins to record your exercises. Also, we have invited for many volunteers to try our study materials. The results show our products are suitable for them. In addition, the system of our CTFL-AT test training is powerful. You will never come across system crashes. The system we design has strong compatibility. High speed running completely has no problem at all.

## CTFL-AT Exam Tests - Latest CTFL-AT Learning Materials

## ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q60-Q65):

**NEW QUESTION # 60**
Consider the following user story for an Agile project aimed at developing an application that calculates the reimbursement of medical visits:
"As an owner of the application, I want the reimbursement of medical visits to be calculated based on the following rules:
There are two types of reimbursable visits: Doctor's Office Visits (DOCVs) and Hospital Visits (HVs).
The reimbursement for DOCVs is 33%, while the reimbursement for HVs depends on the type of the specialist visits. Two types (A, B) of specialist visits exist and the associated reimbursements are 45% for A and 90% forB." Which of the following would you expect to be the most suitable black-box test design technique for the user story?

- A. Use case testing
- B. Decision table testing
- C. Equivalence partition testing
- D. State transition testing

**Answer: B**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
FromCTFL-AT Syllabus v4.0, Section 3.1Testing Techniques and Agile, it states:
"Decision table testing is useful when the outcome depends on combinations of inputs or rules." In this case,different reimbursement percentagesare determined based ontypes of visits and subtypes, makingOption A (Decision Table Testing)the ideal technique.
* Option Bfocuses onsingle input ranges, less suitable here.
* Option Csuits end-to-end scenarios but not logic-driven calculations.
* Option Dapplies tostate-based systems, which this is not.

Learning Objective (K3) - Apply appropriate test design techniques in Agile

**NEW QUESTION # 61**
You are developing the code that controls an industrial Espresso machine which will be operated by waiting staff in restaurants.
The machine is rather complicated and has lots of switches and buttons, so in the next iteration instructions will be provided to the operator on a small LCD screen.
A User Story for the Operator-Instructions module is as follows:
"As an operator of the Espresso machine, I would like to know how to steam milk, so I can add steamed milk to the coffee." The following is a list of risks identified for this story, with assigned probability and impact.

- A. The instructions may be incorrect or appear in the wrong order. Probability: Low. Impact: High
- B. An untrained customer will attempt to use the coffee machine. Probability: High. Impact: High
- C. Operators will not read the instructions and will try various switches and buttons until something works. Probability: Low. Impact: Low
- D. A small child may try to steam milk. Probability: High. Impact: Low

**Answer: A**

**NEW QUESTION # 62**
You are a tester in an agile team. The user story you are due to test is still under development so your tests are blocked. The main issue holding progress on this user story is that the developer's unit tests are constantly failing.

As an agile tester, which of the following actions should you take?

- A. Review the design of the problematic user story and improve it where possible.
- B. Work together with the developer, suggesting reasons why the tests are failing.
- C. Create a bug report for each of your blocked tests.
- D. Use the time to improve and automate existing test cases of other user stories.

**Answer: B**

Explanation:
Explanation
As an agile tester, you should work together with the developer, suggesting reasons why the tests are failing.
This is an example of the agile principle of collaboration and communication within the team, as well as the agile testing practice of early and frequent feedback. By working together with the developer, you can help to identify and resolve the root causes of the test failures, as well as share your testing knowledge and perspective. This can lead to faster and better quality delivery of the user story, as well as improved team relationships and trust.
Option A is not a good action, because reviewing and improving the design of the user story is not the tester's responsibility, and it may not address the test failures. Option B is also not a good action, because creating bug reports for blocked tests is not an agile way of handling issues, and it may create unnecessary overhead and waste. Option D is not a good action, because it does not help to unblock the current user story, and it may distract you from the sprint goal and the team's focus.

## NEW QUESTION # 63
Which of the following statements about test-driven development (TDD) and behavior-driven development (BDD) is true?

- A. Both BDD tests and TDD tests are written primarily at the acceptance level, though these tests may also be written at the integration or system levels
- B. Specific BDD frameworks can be used to define acceptance criteria based on the role/feature/benefit template ("As a..., I want..., so that...")
- C. TDD tests are focused on the implementation of the software while BDD tests on the exhibited behavior of the software
- D. TDD tests and BDD tests are written by developers, but TDD tests are generally easier for other team members and stakeholders to understand than BDD tests

**Answer: C**

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
From CTFL-AT Syllabus v4.0, Section 3.3 Behavior-Driven Development, and 3.2 Test-Driven Development:
"TDD focuses on writing unit tests that guide the implementation of code."
"BDD focuses on writing scenarios that describe the behavior of the software, often using a language that stakeholders can understand." Thus, Option B is accurate - TDD targets code implementation, BDD targets behavioral expectations.
* Option A is incorrect - TDD is at unit level, while BDD is at the acceptance level.
* Option C is false - BDD is more readable and accessible for non-technical stakeholders.
* Option D confuses BDD with user story formats; BDD uses Given-When-Then, not the "As a... I want..." template.

Learning Objective (K2) - Differentiate TDD and BDD practices

## NEW QUESTION # 64
Iteration planning for Sprint 5 of your current project is complete. The plan for the sprint is to increase performance of the system, which of the following acceptance criteria would you expect for Sprint 5?
1) User access for all roles has been validated.
2) A static analysis tool has been executed for all code.
3) 100% of the existing regression test suite has passed.
4) System is responding in less than 3 seconds, 90% of the time.
5) A new version of internet Explorer has been included.

- A. 4, 5

- B. 1, 3
- C. 2, 5
- D. 3, 4

**Answer: D**

Explanation:
Explanation
The acceptance criteria for a sprint are the conditions that must be met for the user stories to be considered done and deliver value to the customer1. The acceptance criteria should be specific, measurable, achievable, relevant, and testable2. In this case, the plan for the sprint is to increase performance of the system, so the acceptance criteria should reflect that goal. Therefore, the acceptance criteria that would be expected for Sprint
5 are:
100% of the existing regression test suite has passed. This criterion ensures that the system has not introduced any new defects or broken any existing functionality while improving performance3.
System is responding in less than 3 seconds, 90% of the time. This criterion defines a clear and quantifiable performance target that can be verified by testing4.
The other options are not relevant or appropriate acceptance criteria for Sprint 5:
User access for all roles has been validated. This criterion is not related to the performance of the system, but rather to the security or functionality of the system. It might be an acceptance criterion for a different sprint or user story, but not for Sprint 55.
A static analysis tool has been executed for all code. This criterion is not a customer

**NEW QUESTION # 65**
