

Guidewire InsuranceSuite-Analyst New Study Questions, New InsuranceSuite-Analyst Test Syllabus

Guidewire practice test questions fully solved & updated 2025

Subrogation Referral - answer is triggered automatically through built in business rules when a third party is at fault or partially at fault

Benefits of leveraging the base configuration - answer - Leverage project resources and tools more effectively

- Decrease development time

- Decrease testing

- Decreases maintenance cost

- Decrease future upgrade efforts

- Lower their cost of ownership

Only customize when

- Increase overall efficiency

- Establish a competitive advantage

Preparing for Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam (InsuranceSuite-Analyst) exam can be a challenging task, especially when you're already juggling multiple responsibilities. People who don't study with updated Guidewire InsuranceSuite-Analyst practice questions fail the test and lose their resources. If you don't want to end up in this unfortunate situation, you must prepare with actual and Updated InsuranceSuite-Analyst Dumps of FreeDumps. At FreeDumps, we believe that one size does not fit all when it comes to Guidewire InsuranceSuite-Analyst exam preparation. Our team of experts has years of experience in providing Guidewire InsuranceSuite-Analyst exam preparation materials that help you reach your full potential.

The second version is the web-based format of the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam (InsuranceSuite-Analyst) practice test. Browsers such as Internet Explorer, Microsoft Edge, Firefox, Safari, and Chrome support the web-based practice exam. You don't have to install excessive plugins or software to attempt this Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam (InsuranceSuite-Analyst) practice test.

>> Guidewire InsuranceSuite-Analyst New Study Questions <<

New InsuranceSuite-Analyst Test Syllabus - Exam InsuranceSuite-Analyst Vce Format

With our outstanding InsuranceSuite-Analyst exam questions, we can assure you a 99% percent pass rate. Due to continuous efforts

of our experts, we have exactly targeted the content of the InsuranceSuite-Analyst exam. You will pass the exam after 20 to 30 hours' learning with our InsuranceSuite-Analyst Study Material. Many users have witnessed the effectiveness of our InsuranceSuite-Analyst guide exam you surely will become one of them. Try it right now!

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

During a Guidewire Cloud implementation project, stakeholders want to replicate a specific reporting dashboard from their legacy system that is not available out-of-the-box in InsuranceSuite.

Which two negative outcomes could be caused by choosing to custom-build this dashboard instead of using available reporting tools or reconsidering the requirement?

- A. Higher long-term maintenance responsibilities
- B. Simplified testing procedures
- C. Increased development time and effort
- D. Enhanced compatibility with future Guidewire releases
- E. Decreased complexity of the solution
- F. Reduced dependency on Guidewire expertise

Answer: A,C

Explanation:

The correct answers are B and D because custom-building a dashboard that is not available out of the box usually introduces both additional implementation effort and greater long-term ownership burden. In Guidewire projects, analysts are expected to evaluate requirements not only for functional fit, but also for business value, implementation cost, maintainability, and alignment with standard platform capabilities.

D). Increased development time and effort is correct because creating a custom dashboard requires additional design, build, validation, and testing work beyond what would be needed if the team used existing reporting tools or adjusted the requirement to fit supported capabilities. This affects schedule, staffing, and delivery risk. It can also increase complexity in areas such as security, data sourcing, and user acceptance.

B). Higher long-term maintenance responsibilities is also correct because a custom-built solution must be supported over time. That means future updates, regression testing, troubleshooting, and potential rework during upgrades or cloud releases. Custom solutions often become ongoing ownership commitments that increase total cost of ownership compared with standard capabilities.

The remaining options describe the opposite of what custom development usually causes. A custom dashboard does not reduce dependency on expertise, simplify testing, decrease complexity, or improve compatibility with future releases. In fact, it commonly makes those areas more difficult.

From a requirements perspective, this is why analysts must consider value carefully: the best solution is not always to reproduce the legacy system exactly. Instead, the team should assess whether the requested outcome can be achieved through standard tools or whether the requirement itself should be challenged and refined.

NEW QUESTION # 34

Which of the following are deliverable's during the Inception Phase of a project?

Choose 2 options.

- A. Process Maps
- B. Detail Design Document (DDD)
- C. Estimated User Stories
- D. Conceptual Sprint Plan

Answer: C,D

Explanation:

The correct answers are A. Conceptual Sprint Plan and C. Estimated User Stories because both are standard planning and readiness deliverables associated with the Inception phase of a Guidewire InsuranceSuite project. Inception is the phase where the team establishes delivery structure, confirms scope, prepares for iterative execution, and develops enough requirement detail to support planning and estimation.

A Conceptual Sprint Plan belongs in Inception because the project team needs an initial view of how work will be organized across iterations or sprints. At this point, the plan is usually high-level rather than fully detailed, but it is essential for aligning priorities, sequencing major work items, and preparing the project for execution.

Estimated User Stories are also a key Inception deliverable. During this phase, business needs are translated into user stories and then sized or estimated so the team can understand effort, support sprint planning, and validate that the project scope is achievable within constraints. Estimation helps connect business priorities to delivery capacity and is one of the major outcomes of early planning.

The other options are less appropriate as primary Inception deliverables in this context. Process Maps may sometimes be used as analysis aids during requirements work, but they are not typically emphasized as the core phase deliverables being asked about here. Detail Design Document (DDD) is more closely associated with deeper solution design and implementation detail, which generally occurs after Inception as requirements become more refined and the team moves further into execution.

For Guidewire project methodology, Inception focuses on building a delivery foundation. Therefore, when asked which items are deliverables of this phase, the best answers are Conceptual Sprint Plan and Estimated User Stories.

NEW QUESTION # 35

According to the training, what are the common activities of a Quality Analyst? choose three

- A. Executes Unit Testing
- B. Provides impact analysis of downstream systems
- C. Confirms if an issue is a defect
- D. Validate that features are developed per requirements
- E. Assist in defining concrete examples of system behaviors when using BDD
- F. Resolves defects

Answer: C,D,E

Explanation:

In a Guidewire project, the Quality Analyst (QA) plays a proactive role that extends beyond simple execution of test scripts. Their three primary activities from the list are:

* Validate that features are developed per requirements (Option B): This is the core responsibility of the QA-executing Functional Testing and User Acceptance Testing (UAT) support to ensure the delivered software matches the acceptance criteria defined in the User Story.

* Assist in defining concrete examples of system behaviors when using BDD (Option C): Guidewire promotes Behavior-Driven Development (BDD). QAs participate in "Story Huddles" (Three Amigos sessions) to help translate abstract business requirements into concrete "Given-When-Then" scenarios (Gherkin). These examples become the basis for automated tests.

* Confirms if an issue is a defect (Option E): This refers to the Defect Triage process. When a behavior is flagged (by a user or automated test), the QA analyzes it to determine if it is a genuine system failure (Defect) or a misunderstanding of the requirement (Not a Defect) before passing it to a developer.

Why other options are incorrect:

* A. Resolves defects: This is a Developer activity. QAs identify defects; Developers resolve (fix) them.

* F. Executes Unit Testing: This is a Developer activity (typically using GUnit) performed before the code is even released to the QA environment.

* D. Provides impact analysis of downstream systems: This is typically a Business Analyst or Integration Architect activity performed during the elaboration/design phase to understand how a change affects external systems.

NEW QUESTION # 36

Which of the following are examples of standardized prescriptive designs and solutions available on Guidewire Marketplace, that can be leveraged by a project team to speed up the implementation?

Choose 2 options.

- A. Out-of-the-box user stories
- B. Accelerators
- C. Standard process flows
- D. GO Products
- E. Base product documentation

Answer: B,D

Explanation:

The correct answers are B. Accelerators and D. GO Products because these are the types of packaged, reusable implementation assets that Guidewire makes available through the Guidewire Marketplace to help project teams move faster and reduce delivery risk.

Accelerators are intended to speed implementation by providing prebuilt patterns, templates, integration aids, and solution components that can be adapted for a customer project. They reflect standardized and prescriptive approaches that save effort compared with designing everything from the beginning. For an analyst, accelerators are valuable because they can influence requirements discussions, solution options, and estimation by showing proven starting points.

GO Products are also designed to accelerate delivery. They typically represent packaged solutions or predefined offerings that support faster implementation through reusable productized assets. These align closely with the idea of leveraging marketplace-based solutions rather than creating every component from scratch.

The other choices do not fit this description as well. Standard process flows may exist as general guidance, but they are not typically identified as Marketplace solution offerings in the same way as accelerators and GO Products. Out-of-the-box user stories are not generally treated as Marketplace prescriptive solutions. Base product documentation is reference material that helps teams understand the system, but it is not itself a standardized implementation solution used to accelerate project delivery.

So, when the question asks for examples of standardized prescriptive designs and solutions available on Guidewire Marketplace, the best answers are Accelerators and GO Products.

NEW QUESTION # 37

A _____ key field stores a reference to a related object in another entity. It defines a unidirectional relationship. For example, AssignedUser in Claim is the name of a field that points to a specific user in the User entity.

- A. type
- B. array
- C. foreign
- D. field

Answer: C

Explanation:

The correct answer is A. foreign because a foreign key is the data model concept used to store a reference from one entity to a related record in another entity. In Guidewire InsuranceSuite, understanding entity relationships is important for analysts because it helps explain how information is connected across the application and how screens, rules, and reports retrieve related data.

A foreign key creates a unidirectional relationship from one entity to another. That means one entity contains a field that points to a record in a different entity, but the relationship is defined from the referencing side. In the example given, AssignedUser on the Claim entity points to a specific record in the User entity.

This is a classic foreign key relationship: the Claim stores a reference to the related User.

This concept is especially useful for Business Analysts when reviewing the data model, the Data Dictionary, or screen requirements. If an analyst needs to understand how a claim is related to a policy, user, incident, or exposure, foreign keys help identify where those links exist and how data can be accessed. This supports better requirement definition, reporting analysis, and collaboration with developers and testers.

The other options are not correct. Field is too generic and does not describe a relationship type. Array refers to a collection relationship, not a single key reference to another entity. Type refers to classification or data type, not relational linkage.

So, the missing word is foreign, because a foreign key stores a reference to a related object in another entity.

NEW QUESTION # 38

.....

Perhaps you still cannot believe in our Guidewire InsuranceSuite-Analyst study materials. You can browser our websites to see other customers real comments. Almost all customers highly praise our Guidewire InsuranceSuite-Analyst Exam simulation. In short, the guidance of our InsuranceSuite-Analyst practice questions will amaze you. Put down all your worries and come to purchase our InsuranceSuite-Analyst learning quiz!

New InsuranceSuite-Analyst Test Syllabus: <https://www.freedumps.top/InsuranceSuite-Analyst-real-exam.html>

But with our IT staff's improvement, now our Guidewire InsuranceSuite-Analyst Desktop Test Engine can be installed on all electronic products, We assure your success in Certification exam but after using the FreeDumps New InsuranceSuite-Analyst Test Syllabus preparation material, if you fail then your investment will get 100% money back, You can enjoy the right of free update for one year if you choose us, and the latest version for InsuranceSuite-Analyst exam dumps will be sent to you automatically.

Some expressions produce a numerical return value, InsuranceSuite-Analyst as in the example of adding two numbers together, When I got the images home, the fun startedin Photoshop, But with our IT staff's improvement, now our Guidewire InsuranceSuite-Analyst Desktop Test Engine can be installed on all electronic products.

100% Pass Quiz Newest Guidewire - InsuranceSuite-Analyst New Study Questions

We assure your success in Certification exam but after Exam InsuranceSuite-Analyst Material using the FreeDumps preparation material, if you fail then your investment will get 100% money back, You can enjoy the right of free update for one year if you choose us, and the latest version for InsuranceSuite-Analyst exam dumps will be sent to you automatically.

Everyone can get help from FreeDumps's free demo of Guidewire InsuranceSuite-Analyst exam questions, It's essential to boost your profession if you are in the IT industry, because technology changes fast and new things emerge within few months.
