BONUS!!! Download part of TestsDumps Mule-Arch-201 dumps for free: https://drive.google.com/open?id=1cS_RBjT6X3vkbVUmzueop4_zYxUkbe

Our company's Mule-Arch-201 exam questions are reliable packed with the best available information. It is always relevant to the real Mule-Arch-201 exam as it is regularly updated by the best and the most professional experts. As long as you study with our Mule-Arch-201 learning braindumps, you will be surprised by the most accurate exam questions and answers that will show up exactly in the real exam. So what are you waiting for? Just put them to the cart and buy!

The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing Mule-Arch-201 certification can help you realize your dreams. If you buy our product, we will provide you with the best Salesforce MuleSoft study materials and it can help you obtain Mule-Arch-201 certification. Our product is of high quality and our service is perfect.

2026 Realistic Mule-Arch-201 Discount - Salesforce Pass Salesforce Certified MuleSoft Platform Architect Test Guide 100% Pass

Mock tests are outstandingly worked for you to make heads or tails of your goofs while giving Mule-Arch-201 Exam. Salesforce Mule-Arch-201 gives practice material that is as per the legitimate Salesforce Mule-Arch-201 exam. A free demo is other than open to test the parts prior to buying the entire thing for the Mule-Arch-201 Exam. You can pass Salesforce Mule-Arch-201 certification on the off chance that you use Salesforce Mule-Arch-201 Dumps material.

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which scenario is suited for MUnit tests instead of integration tests?

- **A. For read-only interactions to any dependencies (such as other web APIs)**

- B. When no mocking is permissible
- C. When testing does not require knowledge of implementation details
- D. For tests that are implemented using SoapUI

Answer: A

Explanation:

MUnit is MuleSoft's testing framework for creating and running automated tests within Anypoint Studio. It is specifically designed for unit testing Mule applications and is best suited when testing doesn't require understanding the inner workings or implementation details of the components being tested.

Ideal Use Cases for MUnit:

MUnit is optimal when testing individual flows, functions, or components in isolation. This type of testing focuses on verifying the behavior of each unit without needing to understand the complete system.

Since unit tests do not require external integrations or dependencies to be live, mocking is commonly used in MUnit to simulate the behavior of external services and APIs.

Why Option B is Correct:

Option B aligns with the concept of unit testing, where the emphasis is on testing functionality rather than system integration.

Integration tests, on the other hand, would require implementation knowledge and live endpoints, making them unsuitable for MUnit's scope.

of Incorrect Options:

Option A (read-only interactions) and Option C (no mocking) do not suit MUnit's typical testing environment as MUnit is designed with mocking capabilities to simulate dependencies.

Option D (SoapUI-based tests) suggests an external testing tool, while MUnit is specific to MuleSoft.

Reference

For more on MUnit best practices, refer to MuleSoft's MUnit documentation.

NEW QUESTION # 39

What correctly characterizes unit tests of Mule applications?

- **A. They are typically written using MUnit to run in an embedded Mule runtime that does not require external connectivity**
- B. They must be triggered by an external client tool or event source
- C. They must be run in a unit testing environment with dedicated Mule runtimes for the environment
- D. They test the validity of input and output of source and target systems

Answer: A

Explanation:

Correct Answer: They are typically written using MUnit to run in an embedded Mule runtime that does not require external connectivity.

Below TWO are characteristics of Integration Tests but NOT unit tests:

>> They test the validity of input and output of source and target systems.

>> They must be triggered by an external client tool or event source.

It is NOT TRUE that Unit Tests must be run in a unit testing environment with dedicated Mule runtimes for the environment.

MuleSoft offers MUnit for writing Unit Tests and they run in an embedded Mule Runtime without needing any separate/ dedicated Runtimes to execute them. They also do NOT need any external connectivity as MUnit supports mocking via stubs.

NEW QUESTION # 40

Refer to the exhibit. An organization is running a Mule standalone runtime and has configured Active Directory as the Anypoint Platform external Identity Provider. The organization does not have budget for other system components.

What policy should be applied to all instances of APIs in the organization to most effectively restrict access to a specific group of internal users?

- A. Apply a client ID enforcement policy; the specific group of users will configure their client applications to use their specific client credentials
- **B. Apply a basic authentication - LDAP policy; the internal Active Directory will be configured as the LDAP source for authenticating users**
- C. Apply an IP whitelist policy; only the specific users' workstations will be in the whitelist

- D. Apply an OAuth 2.0 access token enforcement policy; the internal Active Directory will be configured as the OAuth server

Answer: B

Explanation:

Correct Answer: Apply a basic authentication - LDAP policy; the internal Active Directory will be configured as the LDAP source for authenticating users.

>> IP Whitelisting does NOT fit for this purpose. Moreover, the users workstations may not necessarily have static IPs in the network.

>> OAuth 2.0 enforcement requires a client provider which isn't in the organizations system components.

>> It is not an effective approach to let every user create separate client credentials and configure those for their usage.

The effective way it to apply a basic authentication - LDAP policy and the internal Active Directory will be configured as the LDAP source for authenticating users.

NEW QUESTION # 41

In which layer of API-led connectivity, does the business logic orchestration reside?

- A. Process Layer
- B. Experience Layer
- C. System Layer

Answer: A

Explanation:

Correct Answer: Process Layer

>> Experience layer is dedicated for enrichment of end user experience. This layer is to meet the needs of different API clients/ consumers.

>> System layer is dedicated to APIs which are modular in nature and implement/ expose various individual functionalities of backend systems

>> Process layer is the place where simple or complex business orchestration logic is written by invoking one or many System layer modular APIs So, Process Layer is the right answer.

NEW QUESTION # 42

4A developer for a transportation organization is implementing exactly one processing functionality in a Reservation Mule application to process and store passenger records. This Reservation application will be deployed to multiple CloudHub workers/replicas. It is possible that several external systems could send duplicate passenger records to the Reservation application.

An appropriate storage mechanism must be selected to help the Reservation application process each passenger record exactly once as much as possible. The selected storage mechanism must be shared by all the CloudHub workers/replicas in order to synchronize the state information to assist attempting exactly once processing of each passenger record by the deployed Reservation Mule application.

Which type of simple storage mechanism in Anypoint Platform allows the Reservation Mule application to update and share data between the CloudHub workers/replicas exactly once, with minimal development effort?

- A. Runtime Fabric Object Store
- B. In-memory Mule Object Store
- C. Persistent Object Store
- D. Non-persistent Object Store

Answer: C

Explanation:

Processing Requirements and Storage Mechanism:

The Reservation Mule application will be deployed to multiple CloudHub workers/replicas, meaning that each worker must share state information to handle records exactly once. This requires a shared storage mechanism where state can be stored and accessed by multiple instances to avoid duplicate processing of the same records.

A Persistent Object Store in Anypoint Platform can be used to store records in a way that is accessible across multiple workers, providing a reliable mechanism for "exactly once" processing.

Evaluating the Options:

Option A (Correct Answer): A Persistent Object Store is designed to retain data across different application instances and can be shared by all workers on CloudHub. It helps achieve idempotency by ensuring that a record is processed exactly once.

Option B: Runtime Fabric Object Store is used for applications deployed in Anypoint Runtime Fabric, not CloudHub. This option would not be compatible with the CloudHub deployment.

Option C: A Non-persistent Object Store does not retain data across application restarts or different instances, making it unsuitable for the requirement of synchronized storage for exactly-once processing.

Option D: An In-memory Mule Object Store is local to each worker and is not shared across instances, so it does not meet the requirement for a shared storage mechanism accessible to all CloudHub workers.

Conclusion:

Option A is the correct answer, as a Persistent Object Store allows data sharing across multiple CloudHub workers, enabling them to synchronize and achieve "exactly once" processing of passenger records with minimal development effort.

Refer to MuleSoft's documentation on Object Store configurations and usage for best practices on handling state across distributed instances.

NEW QUESTION # 43

.....

You plan to place an order for our Salesforce Mule-Arch-201 test questions answers; you should have a credit card. Mostly we just support credit card. If you just have debit card, you should apply a credit card or you can ask other friend to help you pay for Mule-Arch-201 Test Questions Answers.
